

Foreword

The Fifth Workshop on Radiofrequency Superconductivity was held at DESY from August 19 to 23, 1991, two years after the Fourth Workshop organized at KEK. The workshop was attended by 152 persons from 8 countries.

The workshop was split up into laboratory talks (one day), review talks (two mornings) and poster contributions (two afternoons). Two days of the workshop were reserved for TESLA, succeeding the First International TESLA Workshop held at Cornell, July 1990.

The workshop was sponsored by the following companies: CETEG AG, Cryophysics GmbH, Dornier GmbH, Werner Flühmann AG, W.C. Heraeus GmbH, NTG, Philipps Components, Pressure Systems Inc., Siemens AG and Gebr. Sulzer AG. Their financial support made it possible to invite 22 students from Europe and abroad to attend the workshop.

We would like to thank all authors for delivery of camera ready manuscripts and G. Enderlein and our conference secretary K. Lando for preparation of the proceedings.
