

# Overview of Acquisition and Control Electronics and Concepts for Experiments and Beam Transport at the European XFEL

Dr. Patrick Geßler

European XFEL

Head of Electronic and Electrical Engineering

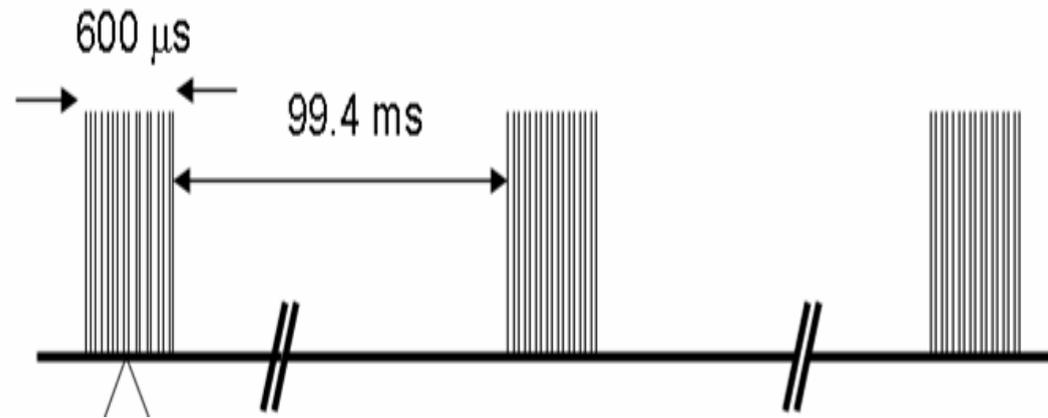

ICALEPCS 2019, New York

October 10<sup>th</sup>, 2019

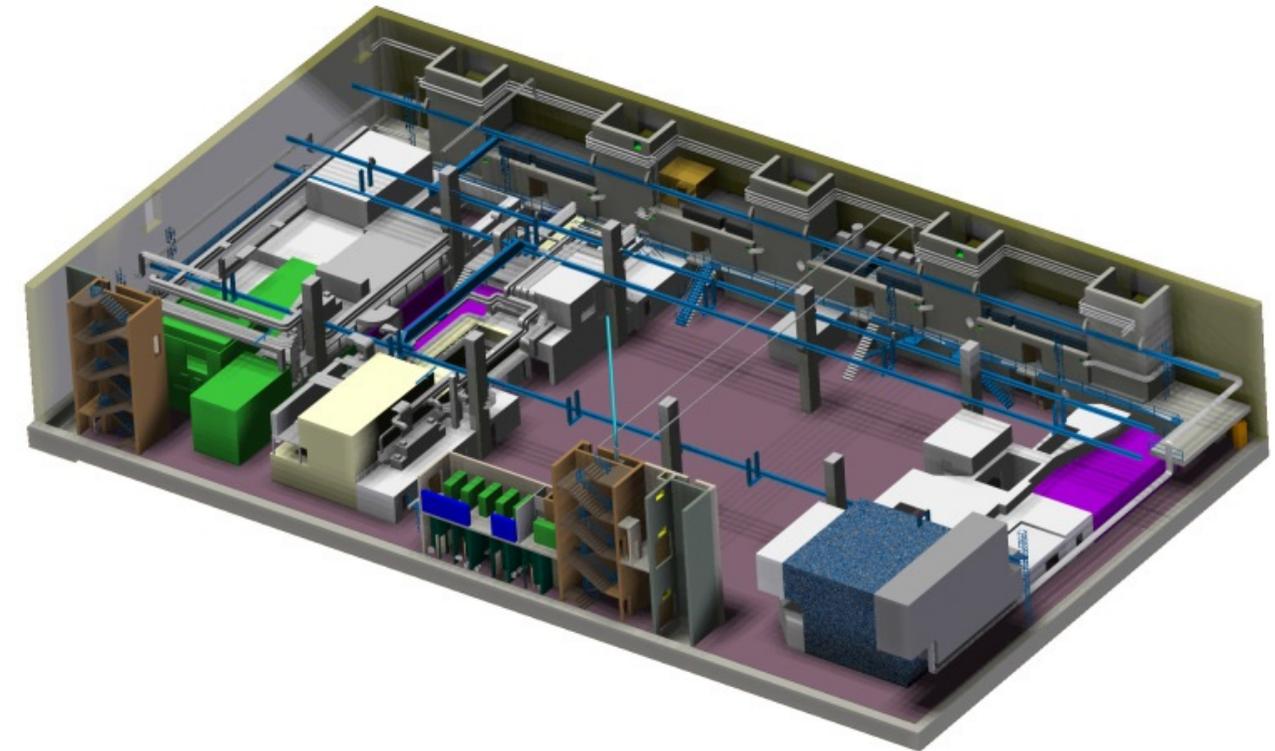

# European XFEL — a leading new research facility

## Boundary conditions in time and space...

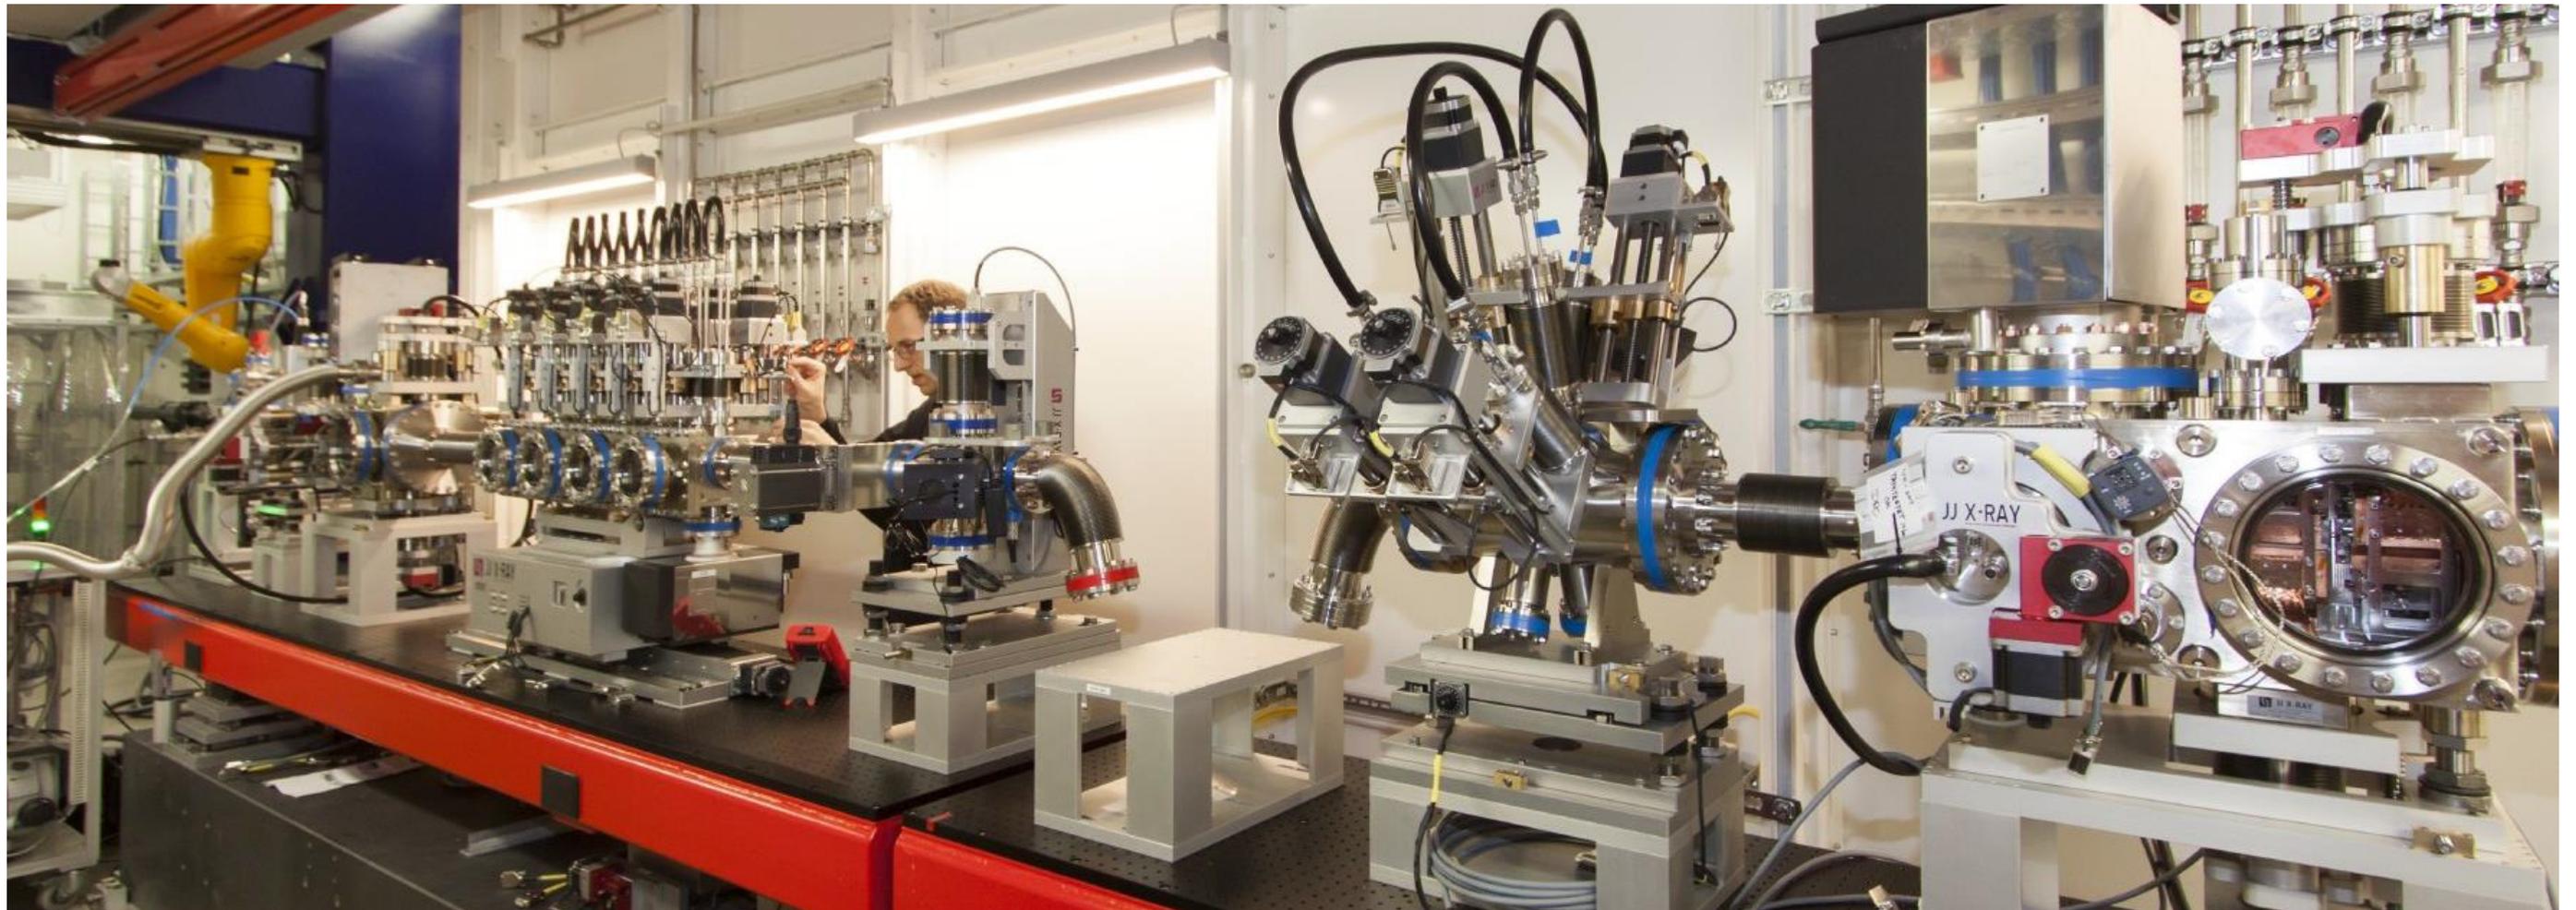

Burst of up to 2700 pulses in 600us every 100ms

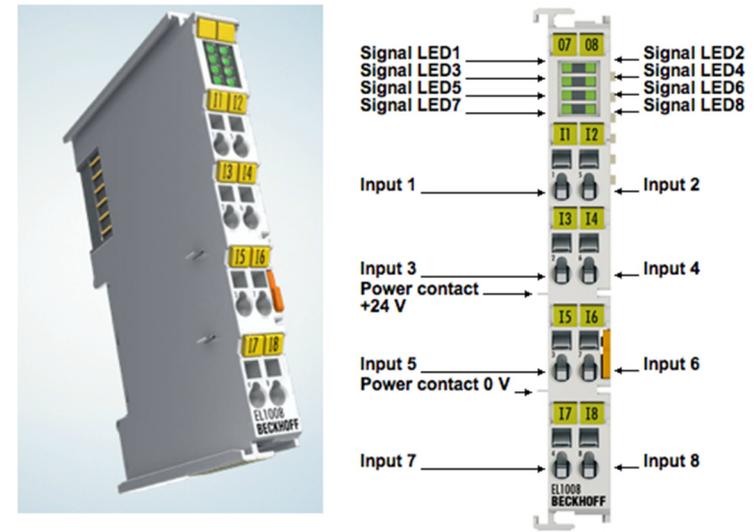

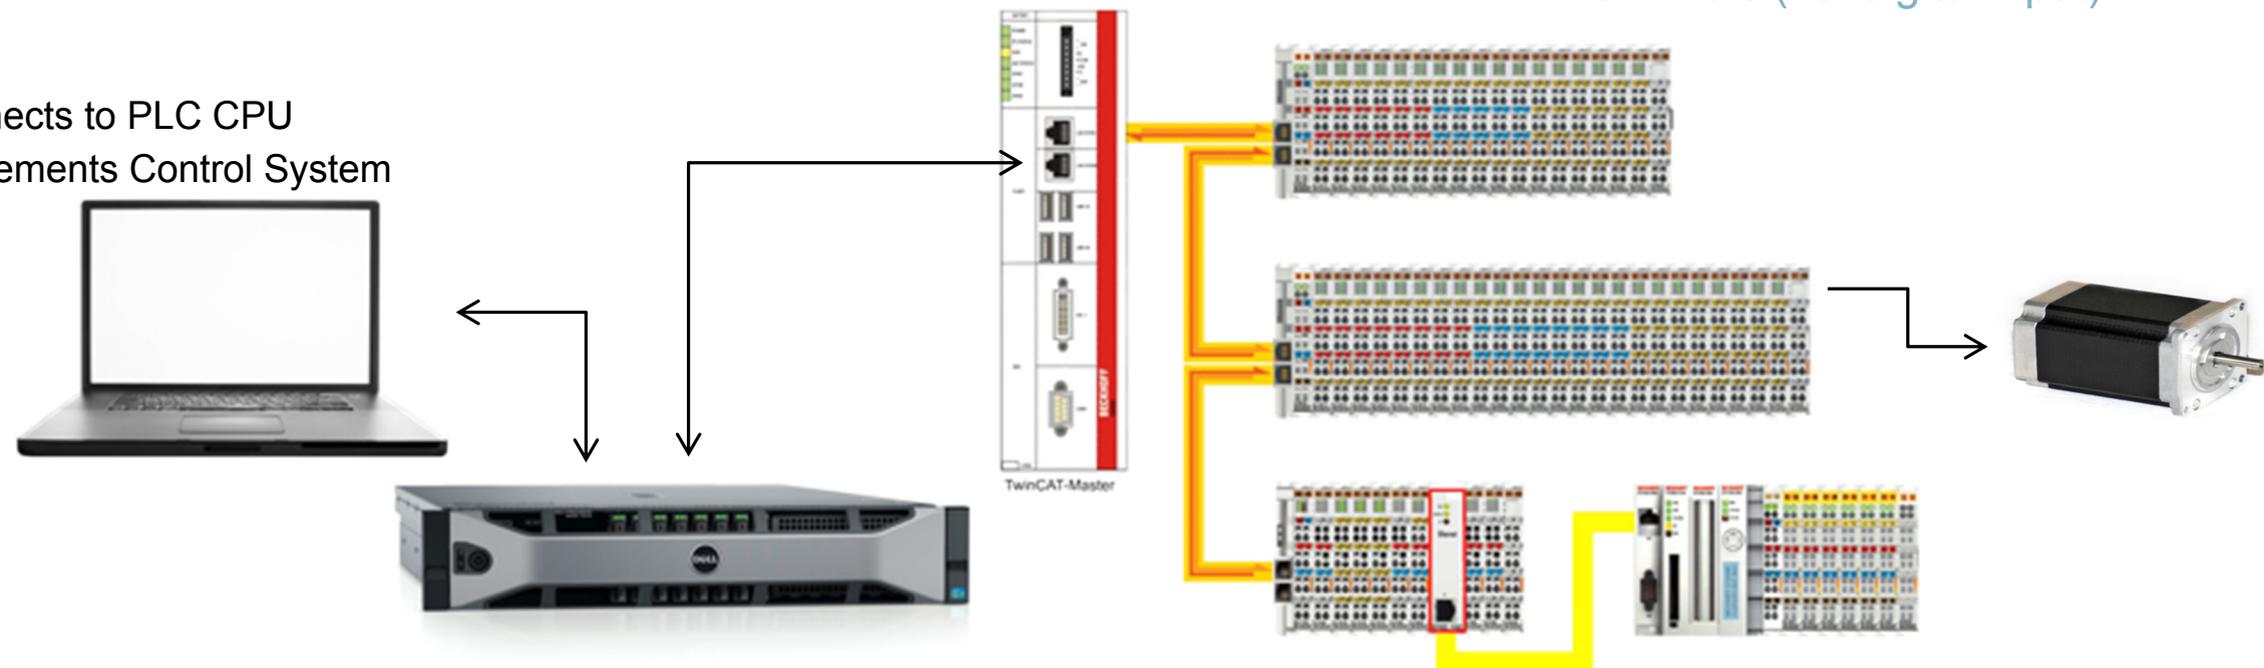

All control electronics should be placed in 19" racks in rack room above the experiment hutches

## What has to be controlled: motion, vacuum, temperature, power, protection,...

# PLC systems – simplified overview

- Programmable Logic Controller
  - Terminals as interface to h/w
  - Terminals are connected together
  - PLC CPU
    - Connects via cables to Terminals
    - Implements programs for control
- Computer
  - connects to PLC CPU
  - Implements Control System

Terminals (i.e. digital input)

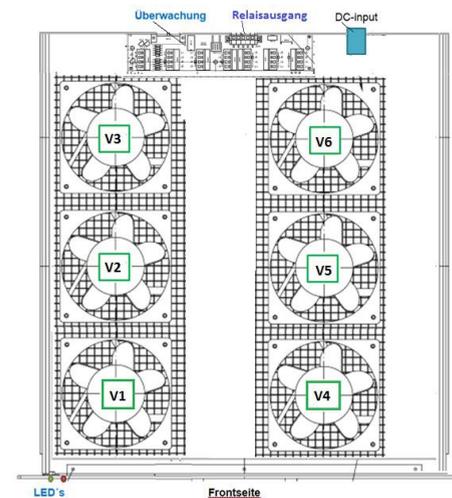

# PLC systems – modular and compact structure

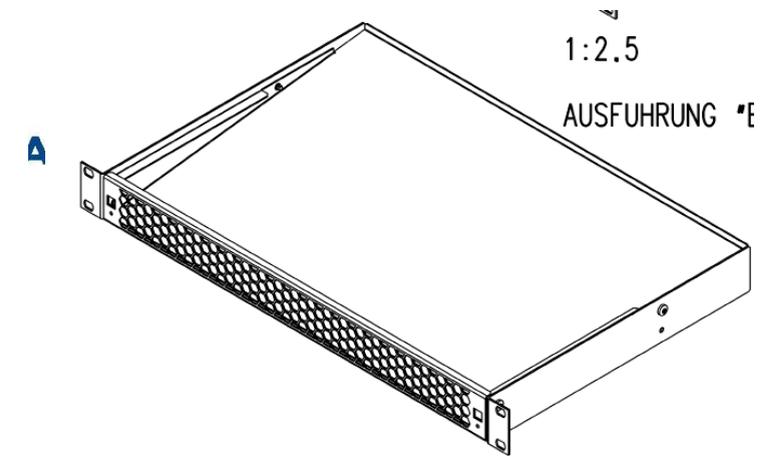

2 PLC modules in one 19" frame

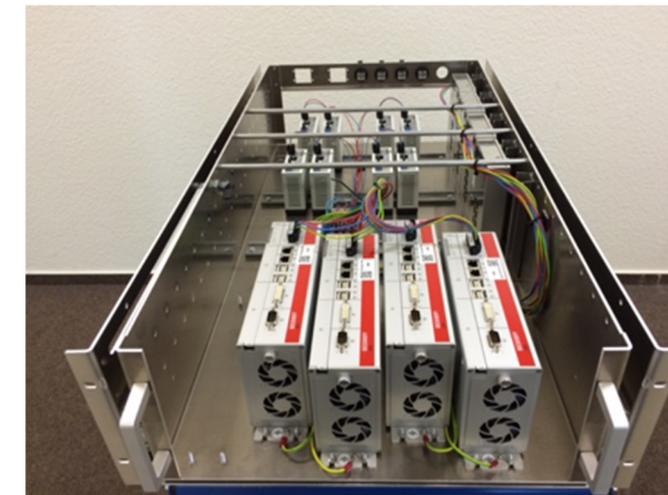

TDK Lambda HFE Supply

FAN unit with alarm output

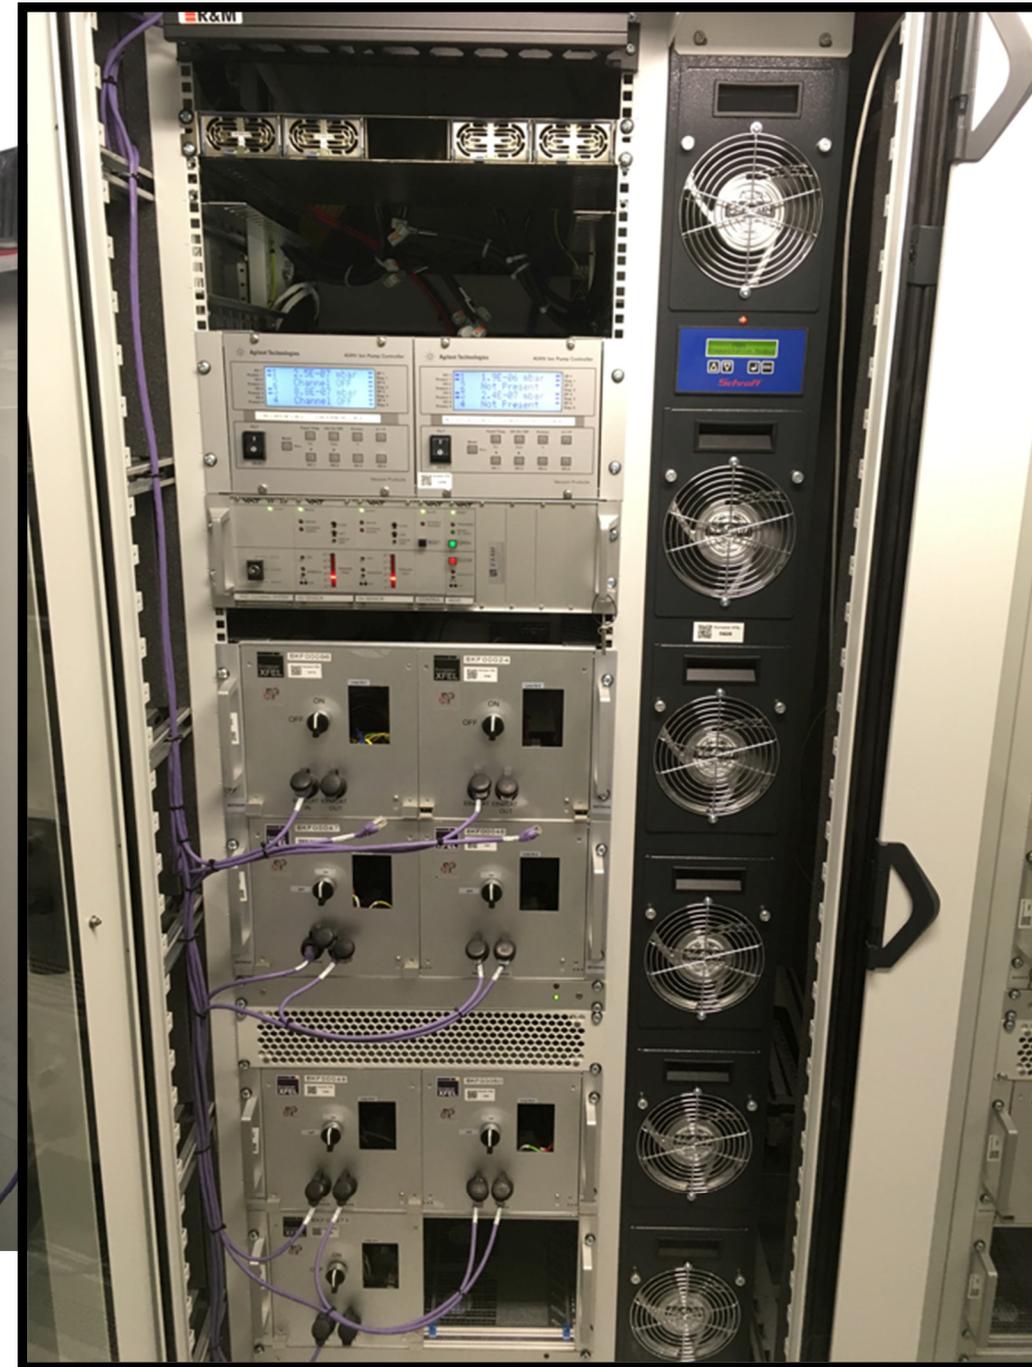

Air duct to redirect airflow in rack

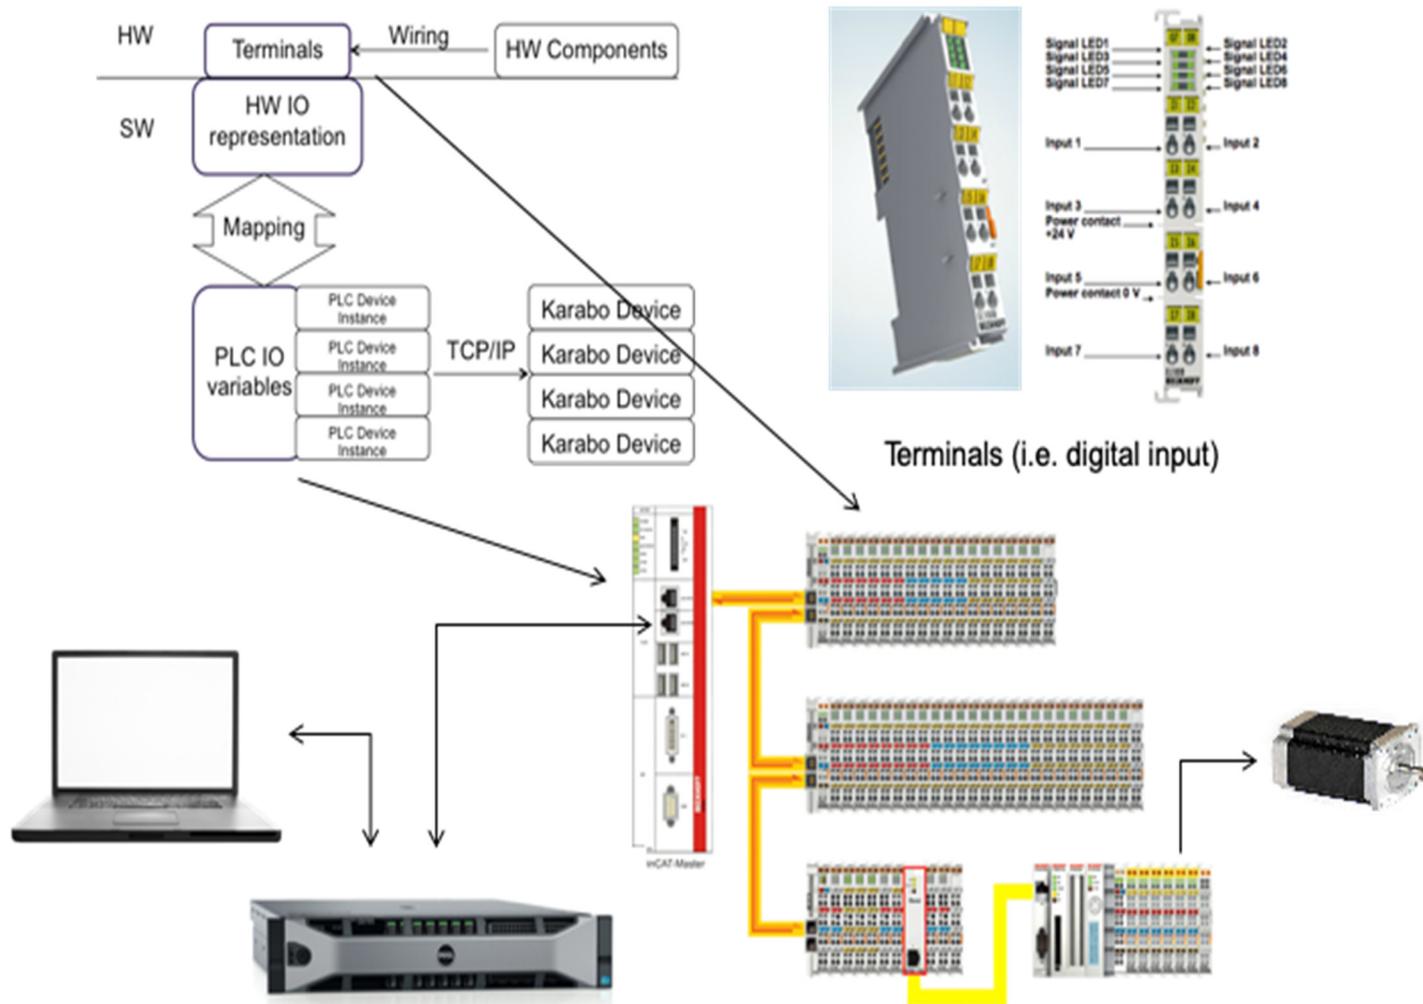

PLC CPU 19" cabinet

## Example of installed PLC systems

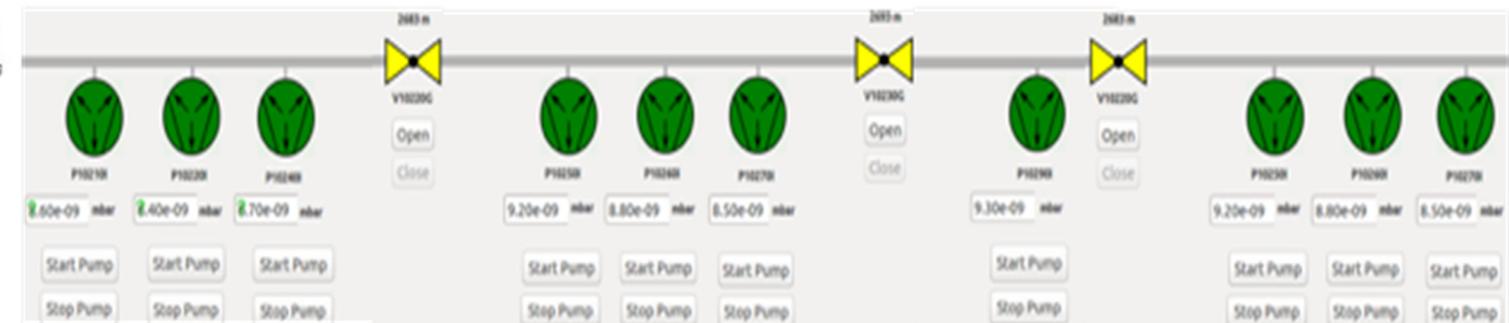

# PLC Framework Library and generic interlock functionality

# PLC Project generation

Presented in THAPP01 this morning

## General MicroTCA Infrastructure

### MicroTCA Crates

Large 12 slot 9U and small 6 slot 2U (including MCH, Power Supply and CPU)

### X2Timer

XFEL Timing System module for synchronization (clocks and triggers) and pulse parameters from NAT

### DAMC2

Required for Clock & Control system for fast 2D detectors, VETO System, Machine Protection System and photon beam loss monitors from DESY

### SIS8300

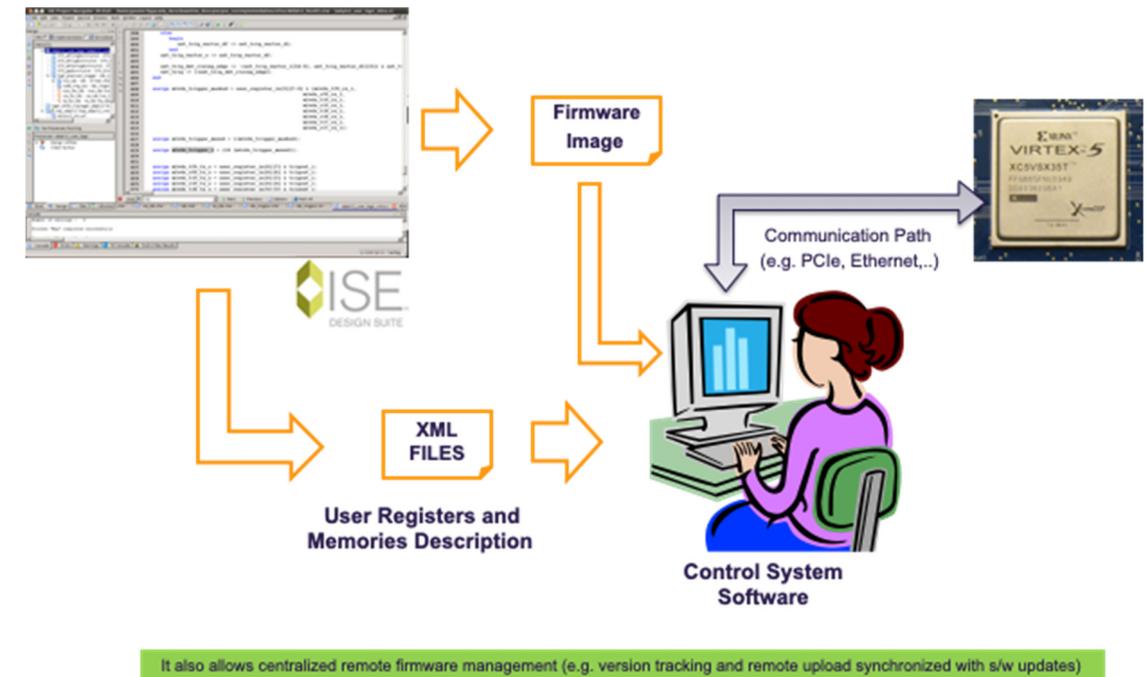

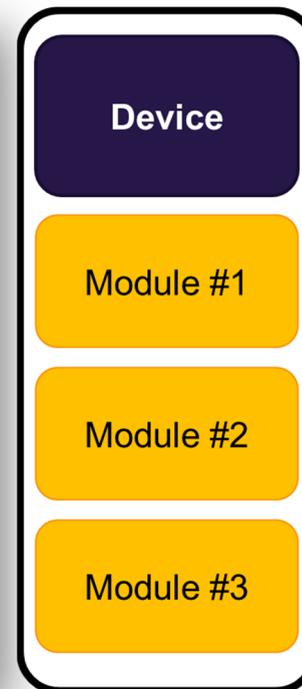

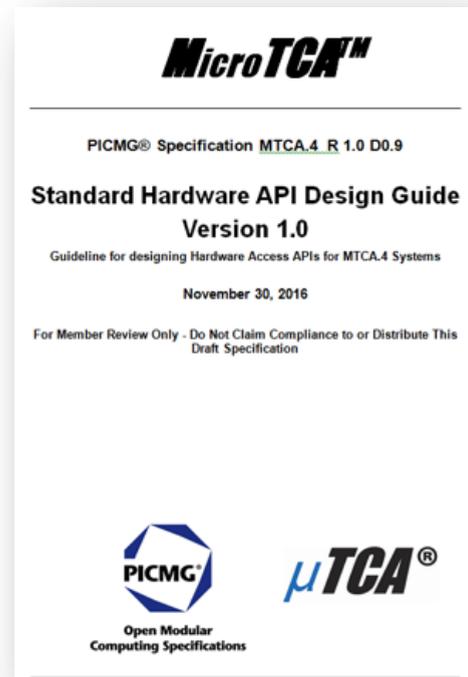

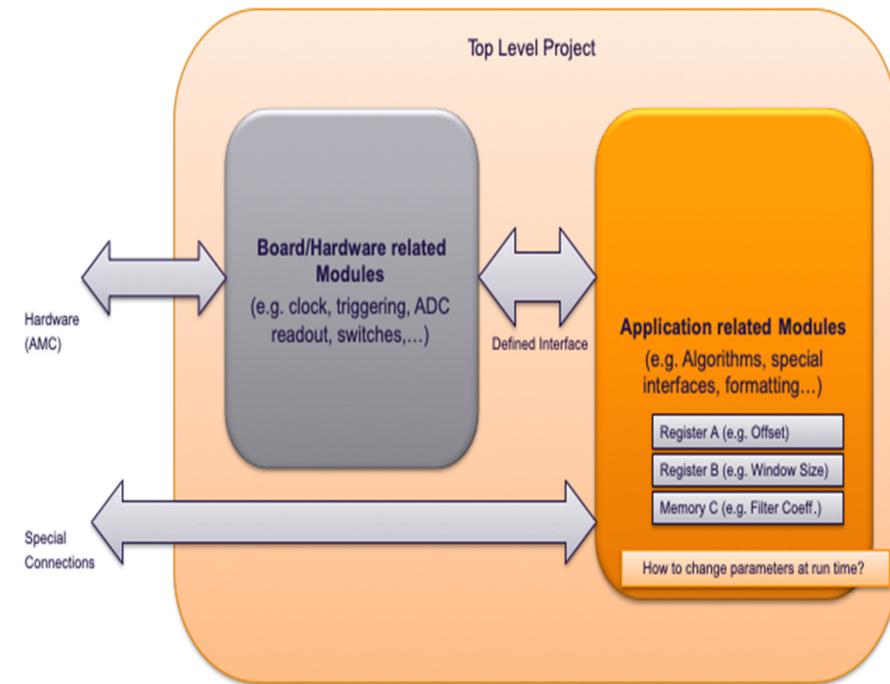

Fast 125MSPS ADC with 10 channels and 16bit resolution for diagnostics and detectors from Struck Innovative Systeme

### ADQ412/ADQ14/ADQ7

High-speed digitizers from 1.8GSPS to 10GSPS with 12 to 14 bit resolution from Teledyne SP Devices

# Overview of general FPGA design concepts

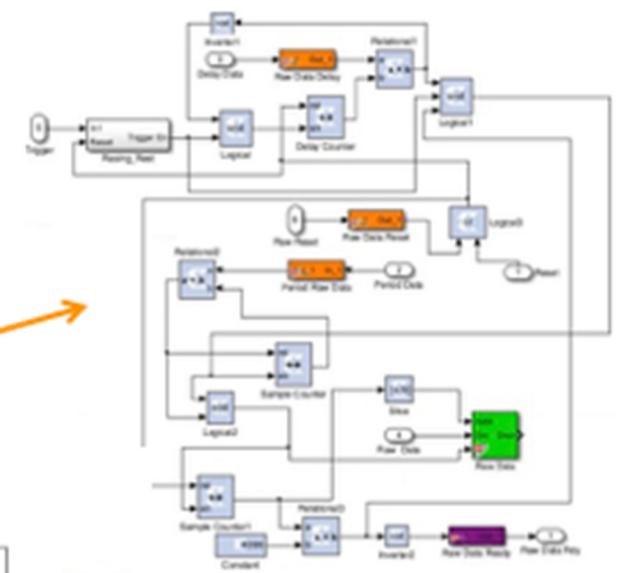

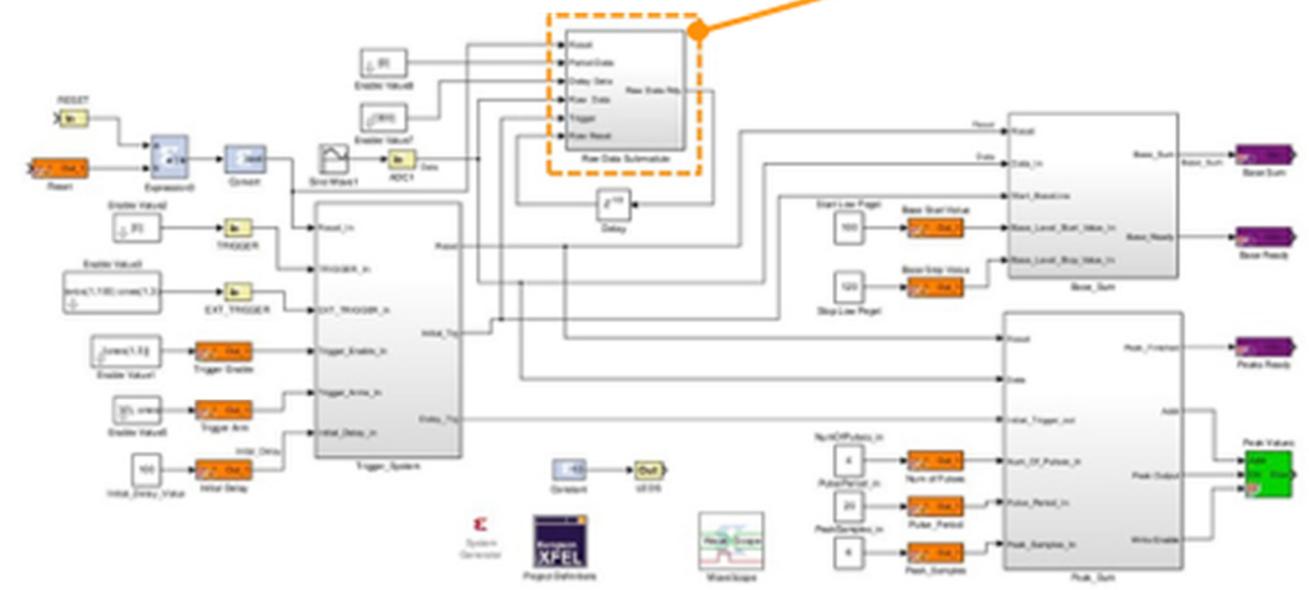

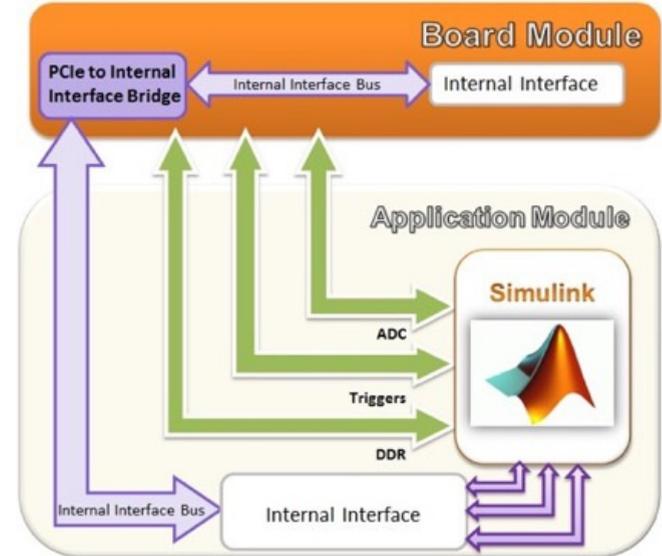

Providing Structure: Start-Up Projects separation in board and application

Self-descriptive register set to auto detect and check for compatibility

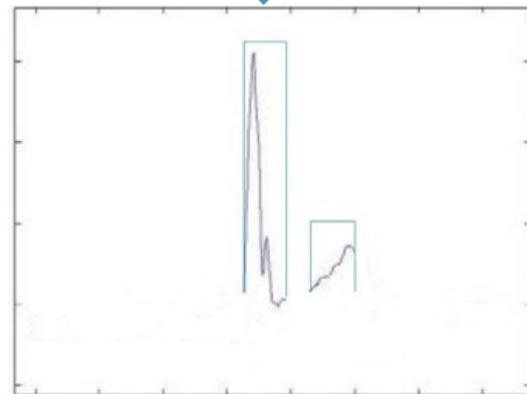

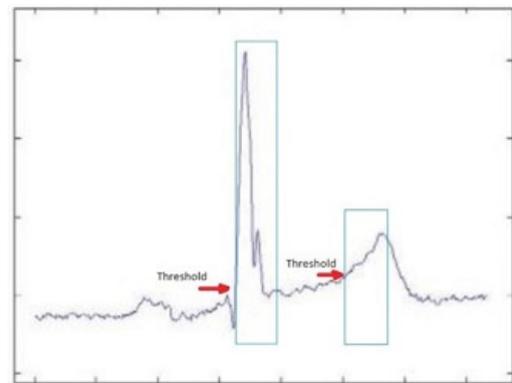

Automatic register and documentation generation based on VHDL table

# High-level FPGA algorithm development and simulation based on Simulink

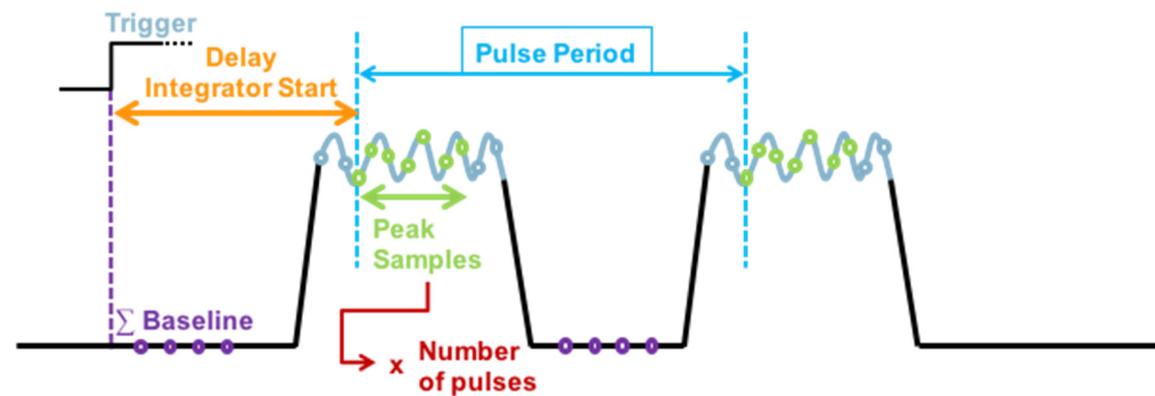

The FPGA should bend time and space according to

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} + \Lambda g_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$$

# FPGA processing algorithms and interfacing standards – Signal processing

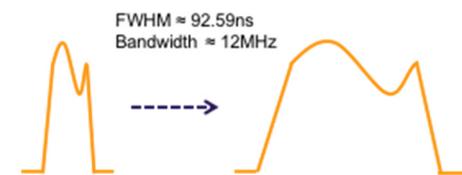

Zero Suppression

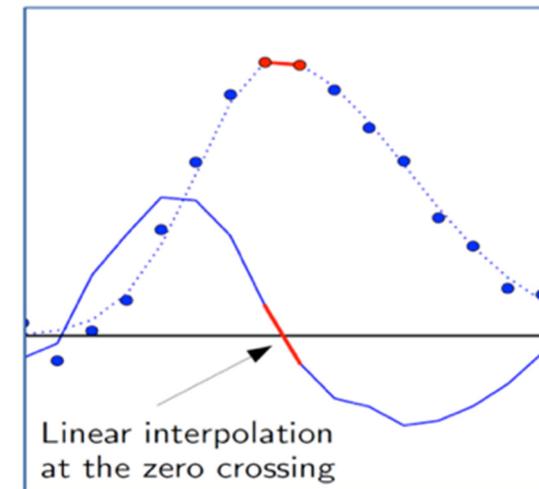

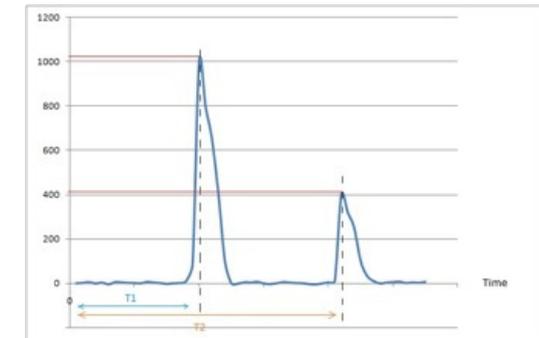

Pulse Stretcher RTM

- 10 SMA Connectors
- 2 Direct channels
- 8 Stretched channels
- Configurable DC Output  
Open/+1.2V/-1.2V

Pulse Integration

Peak Time Detection

## Status (9/2019): Integration in Numbers

- Softdevices: 9.482
- PLC Loops / CPUs: 120
- Number of Terminals: 8.452
- PLC Modules / crates: >500
- MicroTCA Systems: 35
- Digitizer channels: >280

Distribution of softdevices

## What is next...

- Integration of general automation functionality into PLC systems (beyond interlocks)
- Integration of safety PLC systems for cases where a machine is a risk for health
- Development and evaluation of high-speed FPGA based image processing platform
