Note Concerning Publication of the Proceedings

This volume of proceedings of the 1966 Linear Accelerator Conference is a compilation of 79 papers submitted by 14 different research laboratories, industrial concerns, and universities in the United States and 8 from abroad. A total of 142 single and joint authors is represented.

The papers are published in their original manuscript form except for some half-dozen changes which have been checked with the authors; figure captions, however, were retyped and occasionally shortened in order to conserve space without sacrifice of meaning. Several papers submitted "for publication only" have been added to relevant Conference sessions.

The Conference schedule was arranged to encourage discussion by participants. Versions of the tape-recorded discussions, as edited and reviewed by Scientific Secretaries with the assistance, where necessary, of participants, are included immediately following the individual papers to which they apply.
