

NSLS-II BOOSTER RAMP HANDLING

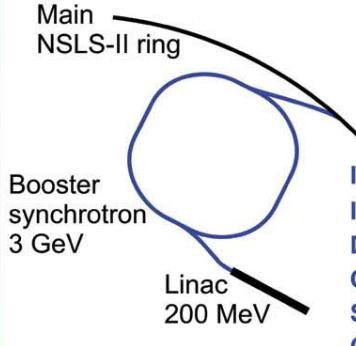

P. Cheblakov, A. Derbenev, R. Kadyrov, S. Karnaev,
S. Serednyakov, E. Simonov, BINP, Russia

T. Shaftan, Y. Tian,
BNL, USA

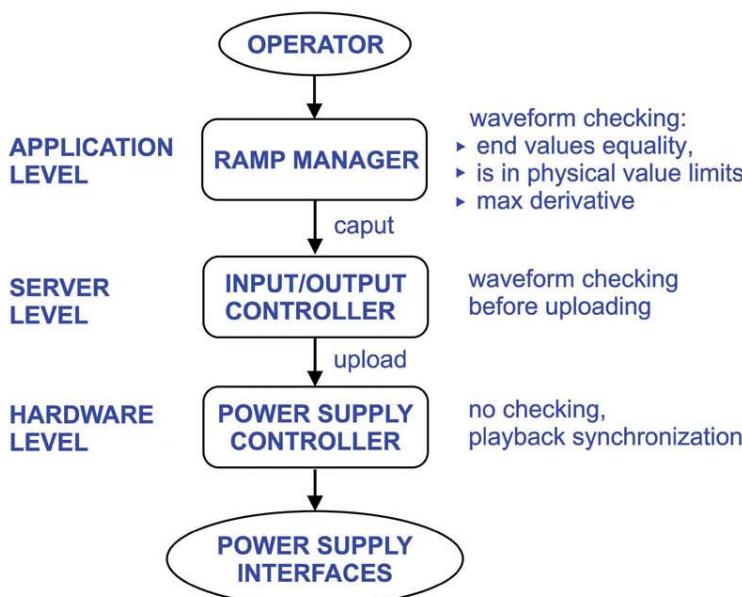

BOOSTER PARAMETERS

Cycle frequency: 1 / 2 Hz
Circumference: 158.4 m
 (264 RF separatrixes)
Current: 20 mA (100 bunches)
Bunch number: 1 / 80 - 150
Acceleration time: 300 msec

Injection: single / double in 100 msec
Inj/Extr pulsed power supplies: 9
Dipoles: combine functions, 3 families
Quadrupoles: 3 families
Sextupoles: 8 + 8
Correctors: 20 X-, 16 Y-direction

HANDLING SEQUENCE

RAMP MANAGER MAIN FEATURES

operations with waveforms:

- edition in polynomial and table format
 - graphical edition
 - individual and group copying
 - rescaling

visualization:

- ▶ plot selected waveforms in one graph
 - ▶ plot selected readbacks in one graph
 - ▶ plot 1-st and 2-nd derivatives

control operations:

- ▶ upload selected waveforms to PVs
 - ▶ perform scenarios (RF control,
switch ON/OFF operations)

save/restore operations:

- ▶ individual and group save/restore
 - ▶ export/import to/from text format

undo operations:

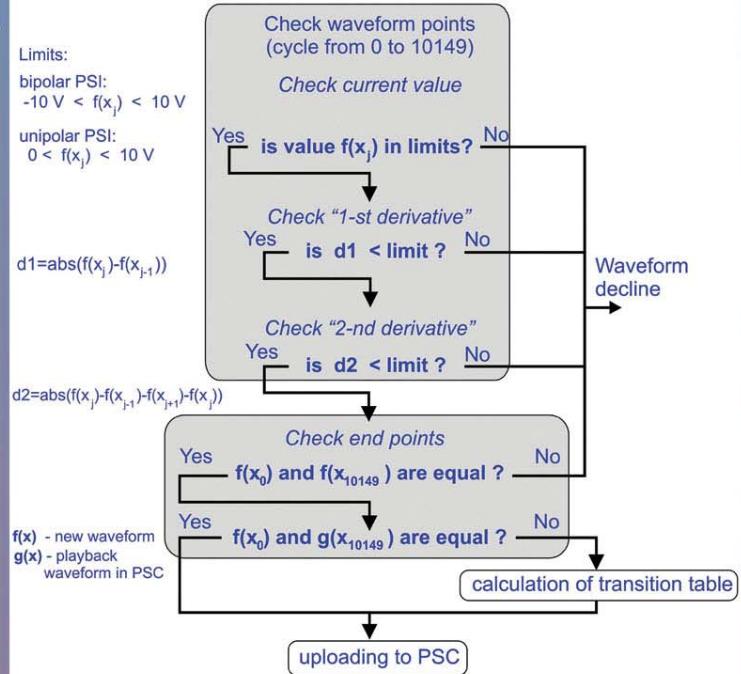

- ▶ manipulations with graph
 - ▶ waveform edition

REQUIREMENTS FOR RAMP CONTROL

- ▶ 10 kHz setting of the reference voltage
 - ▶ Dipole, quadrupole and RF waveforms should be matched
 - ▶ 10^{-3} relative matching accuracy of ramping waveforms of main magnetic elements during the beam ramp
 - ▶ No jumps of 1-st and 2-nd derivatives in dipole and quadrupole PSs waveforms
 - ▶ Changing the reference voltage for injection kickers in 100 ms interval

IOC FUNCTIONS

CHECKING OF NEW WAVEFORM

RAMP MANAGER
