- Summary

Overview of RIBF

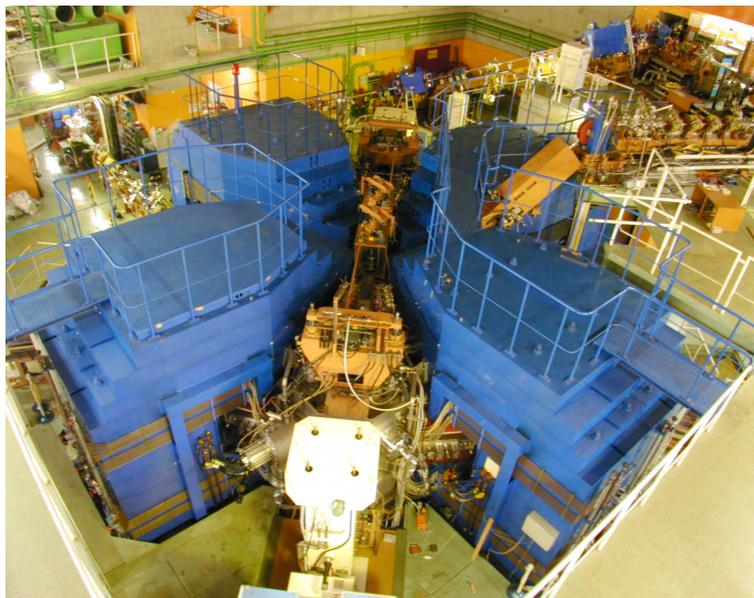

RIBF = RI Beam Factory Project at RIKEN

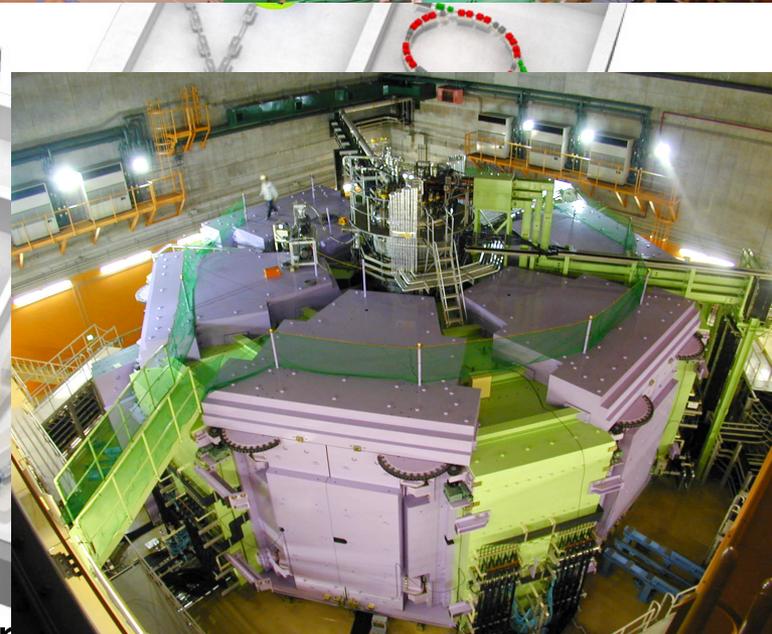

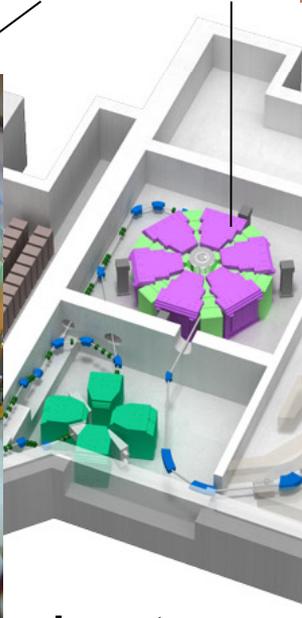

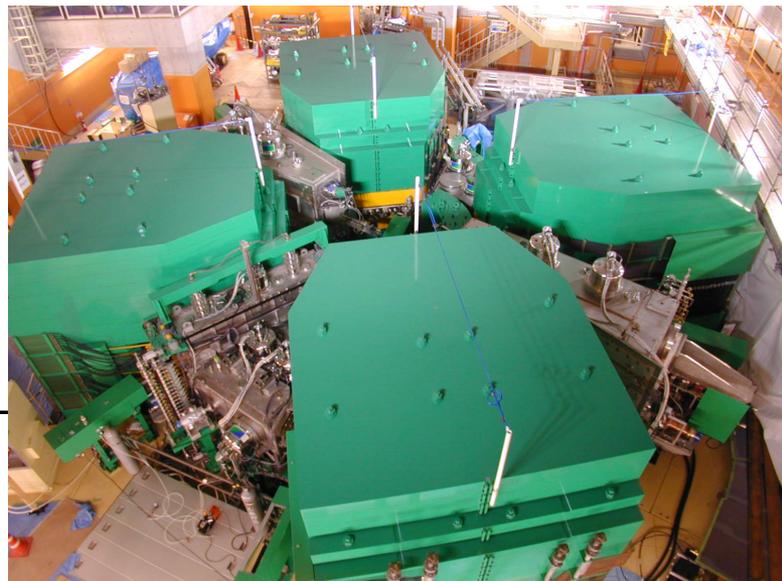

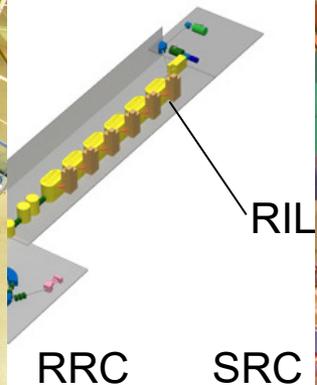

RC = Ring Cyclotron

4 Ring Cyclotrons, 2 linear accelerators and AVF cyclotron.

Overview of RIBF

project

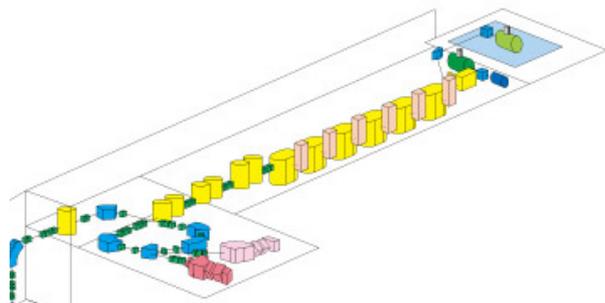

4 Ring Cyclotrons, 2 linear accelerators and AVF cyclotron.

Overview of RIBF

- Variable heavy ion beams have been provided for experiments.
- RIBF mode (RILAC2 + RRC + fRC + IRC + SRC) have been provided
 - * 238U, 124Xe, 48Ca, 70Zn beam = 345MeV/u.
- RILAC stand-alone mode have been provided
 - * 50Ti, 51V, 48Ca, 27Al, 40Ar, 70Zn, 24Mg, and 22Ne beam < 6.6 MeV/u.

New chemical element Nihonium with symbol **Nh** and atomic number **113**, were discovered in RILAC of RIBF project.

Control System for RIBF

RIBF control system is based on EPICS.

It covers

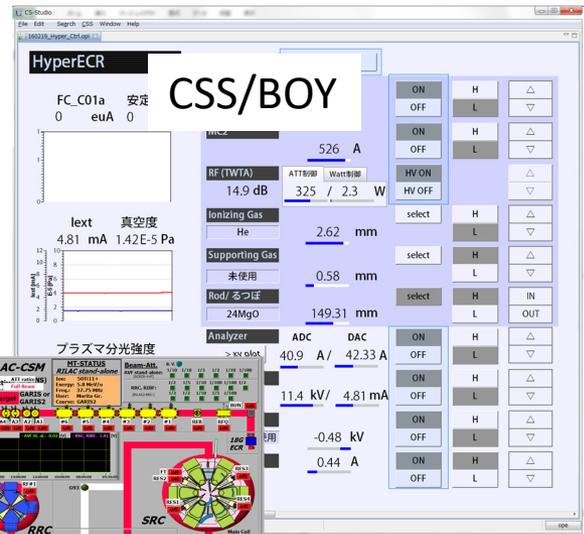

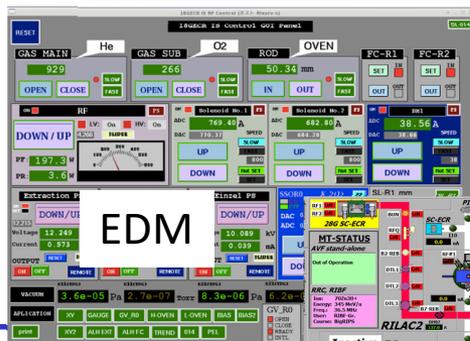

- * Magnet Control
- * Beam Diagnostics
- * ECR Ion Source Control
- * Vacuum Control
- * Beam Interlock System

Other services

- * **Operational Log system**
- * Data archive system (PostgreSQL)
- * Management system (like IRMIS)
- * Alarm system (CSS/Beast)

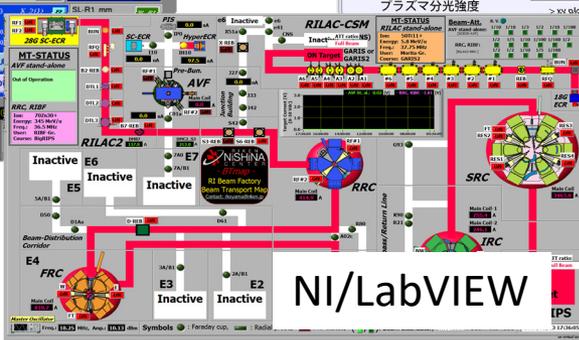

Operator Interface

Komiyama-san reported in No. TUPHA028.

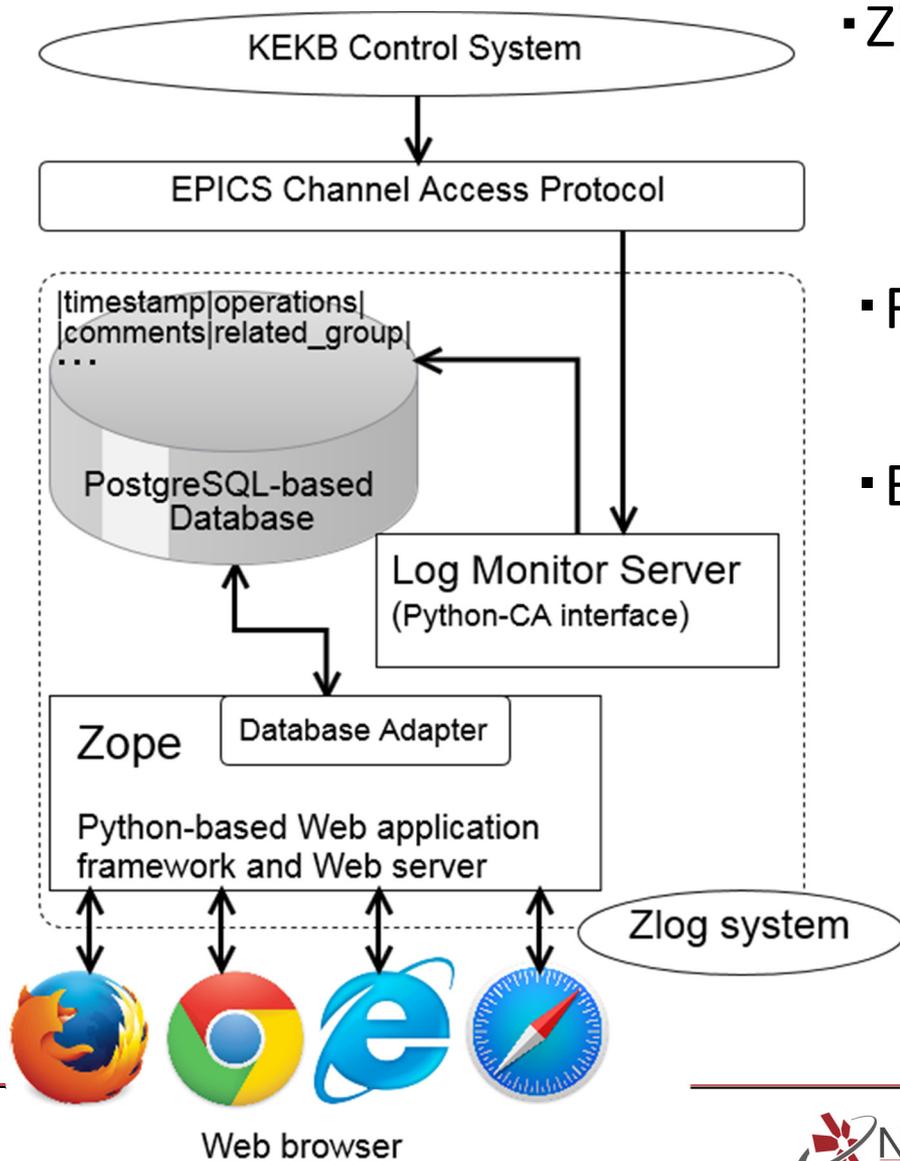

Stand Alone Control System

- RF Control (Only monitor via EPICS)
- Radiation Management System

Operational Log System (Zlog)

- Zlog has been introduced in RIBF.
Zlog = Zope-based operational **log** system.
Zlog has been developed by KEK control group.

- Frontend
Web applications provided by Zope.

- Backend
PostgreSQL-based database.
Log Monitor Server coded in Python

Automatically operational log Inserted by using caMonitor.

Operational Log System (Zlog)

Zlog user interface

Zlog Index page for RIBF

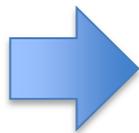

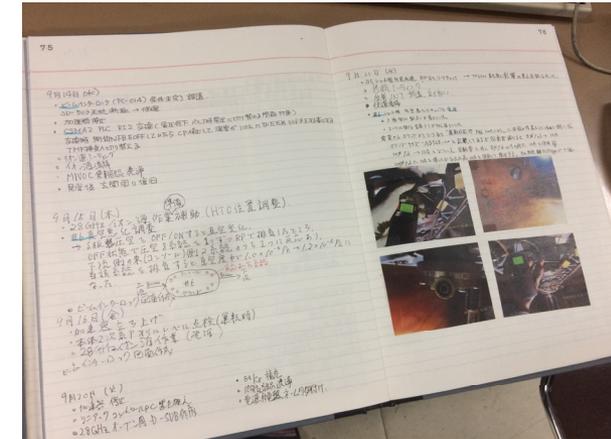

Reference, K. Yoshii et al., in Proc. ICALEPCS2007, Knoxville, Tennessee, USA, 2007, p. 299.

Operational Log System (Zlog)

In use of Zlog for RIBF,

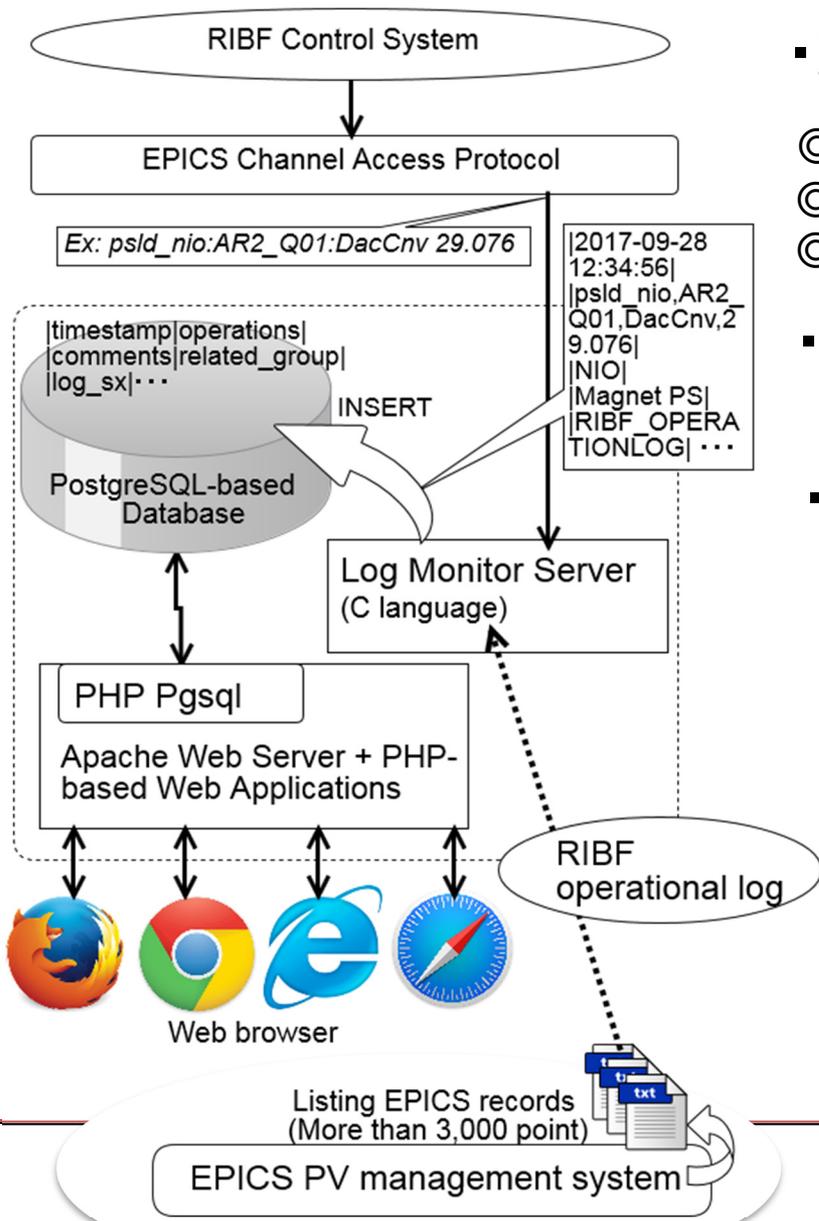

- Automatically inserted operational logs are often required.
- On the other hand, writing by hand is a little.

- * Wiki-based system and paper-based logbook are also usually utilized for comment-writing still now.
- * Various kind of user interface is required for operational log system.

Development of new RIBF operational log system

RIBF Operational Log System (Architecture)

- Zlog compatible system.

- ◎ Web application + Log monitor server + database
- ◎ Same table structure with Zlog database.
- ◎ Zlog user interface is available with RIBF operational log.

- Frontend

Web applications developed with PHP and jQuery.

- Backend

PostgreSQL-based database.

Log Monitor Server coded in C language

Listing more than 3,000 EPICS records using PV management system

Automatically inserted operational log is a comma-separated character string.

ex : psld_nio,AR2_Q01,DacCnv,29.076,

Not only the operational logs but also measured data is displayed.

RIBF Operational Log System (User Interface)

Beam diagnostics device operation

The screenshot displays the RIBF Operational Log System interface. At the top, there are navigation tabs: BEAM STATUS HISTORY, OPERATION LOG (selected), PSLOG, COURSE INFO, and CONTROL SYSTEM INFO. The user is logged in. The main content area shows a table titled "RIBF Faraday Cup OPERATION (2017-10-2)". The table has five columns: TIME, FC TYPE, FC NAME, OLD STATUS, and OPERATION. The data rows show various operations for different Faraday Cup (FC) types and names, including FC_T21, FC_T11, FC_G01b, and BF_SEBM. The operations include SET, Moving ..., and OUT. To the right of the table, there is a "デバイスの選択" (Device Selection) section with buttons for PF, FC (highlighted in red), SLIT, and ATT. Below that is a search section titled "EPICS PVs名で検索" (Search by EPICS PV name) with a search box containing "2017-10-05_08:00" and a blue "オペレーション検索" (Operation Search) button. A blue arrow points from the text "Faraday cup operational logs (Set or Out or Moving)" to the table.

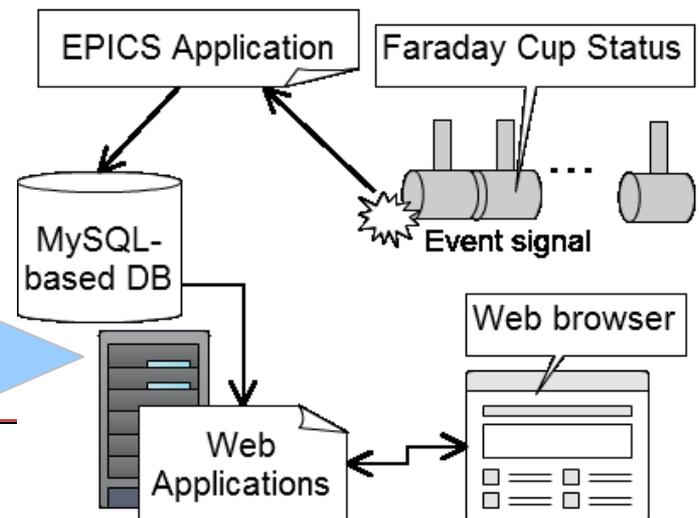

TIME	FC TYPE	FC NAME	OLD STATUS	OPERATION
16:53:33	NDIM	FC_T21	Moving...(16:53:32) →	SET
16:53:32	NDIM	FC_T21	OUT(16:53:31) →	Moving ...
16:53:31	NDIM	FC_T21	Moving...(16:53:29) →	OUT
16:53:29	NDIM	FC_T21	SET(16:53:28) →	Moving ...
16:53:28	NDIM	FC_T11	Moving...(16:53:26) →	SET
16:53:26	NDIM	FC_T11	OUT(16:53:25) →	Moving ...
16:53:25	NDIM	FC_T11	Moving...(16:53:23) →	OUT
16:53:23	NDIM	FC_T21	(Yesterday) →	SET
16:53:23	NDIM	FC_T11	(Yesterday) →	Moving ...
16:53:20	NDIM	FC_G01b	Moving...(16:53:19) →	SET

16:53:19	NDIM	FC_G01b	OUT(16:53:16) →	Moving ...
16:53:19	NDIM	BF_SEBM	OUT(16:53:16) →	Moving ...

Faraday cup operational logs (Set or Out or Moving)

Faraday cup operation monitoring is closely related to measurement of the beam service time; therefore, we also implement another dedicated system.

Beam Status History

- ◎ Visualization system for beam service time by using Faraday cup operational logs.
 - Faraday cup is a destructive beam monitor, is utilized for beam current measurement in RIBF.
- ◎ Beam availability is an essential factor for performance of accelerator.
- ◎ Beam service time is measured automatically by Beam Status History System.
 - When beam service interruption occurs because of hardware troubles of the accelerators, etc., the top priority is fixing the problem and resuming the beam service again as soon as possible.
 - Previously, hand-written log note book was used.
- ◎ As event signal, Faraday cup status (Set or Out) is used.
- ◎ The events are stored into MySQL-based database.
- ◎ The Web applications are developed with JavaScript chart library and JQuery.
- ◎ Same concept with Zlog
 - Log monitor server + Web application + RDB

Beam Status History (User Interface)

Beam-On-Time Ratio

We can check the Beam Availability more easily than before.

$$\text{Beam Availability} = \frac{\text{Beam Service Time}}{\text{Beam Request Time}}$$

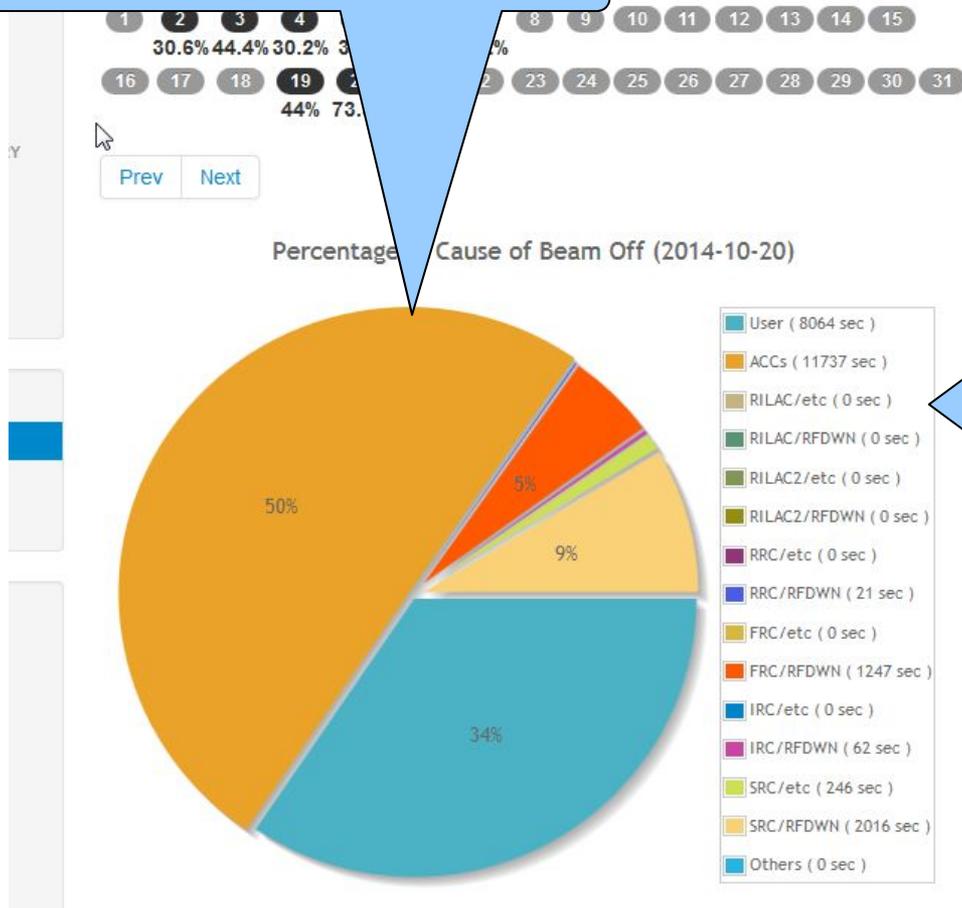

Total Beam Service time (second) in 1 day are shown by bar chart.

Beam Status History (User Interface)

We can check the accelerator's conditions more easily than before.

Ratio in cause of beam-off

Beam-off time are calculated by input comments.

Results of Implementation

- To restore the previous parameters during the beam tuning, the accelerator operators utilize the RIBF operational log.
- It allows easy comparison of all past parameters, such as the electromagnet power supplies, with the current parameters.
- When some trouble, the operator can restore the accelerator condition as soon as possible.
- More than 3,000 EPICS record are monitored without problem.

Summary

- We have developed a new Web-based RIBF operational log system, which is compatible with Zlog, based on requests from the RIBF accelerator operators.
- It has provide various user interface for the operational log.
- In the case of problems during beam tuning in particular, it is useful for analyzing and restoring.

Thank you
