Motivation

→ EPICS

- ✓ Devices control via RS232/Ethernet;
- ✓ PVs (Process Variables) available on network, providing monitoring and “instant” operation;

→ Python

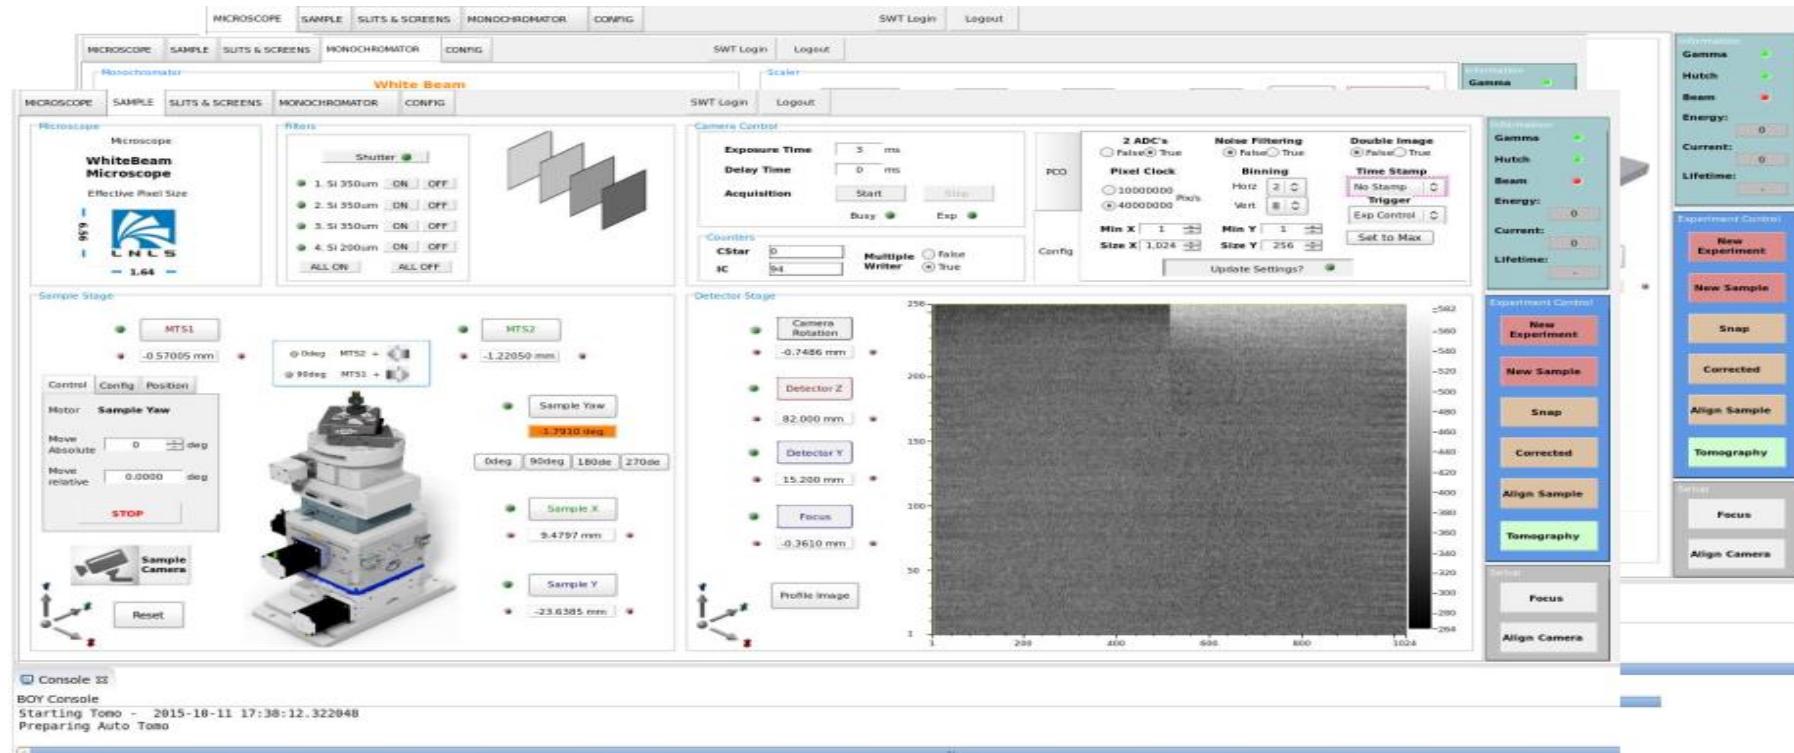

- ✓ Scripts to coordinate actions on beamlines with a set of devices synchronously;
- ✓ PyEPICS, Py4Syn*;

→ GUIs

- ✓ Easy to operate actions (scripts);
- ✓ Current tools:
 - ◆ Java based:
 - CS-Studio (*Control System Studio*);
 - LabWeb (*Science Studio*);
 - ◆ Python based:
 - In-house developed TkInter solution;
 - MXCuBE and in-house solution, both based on PyQt;

*H. H. Slepicka et. al., 2015, “Py4Syn: Python for synchrotrons”. J. of Synchrotron Rad., V. 22, pp. 1182-1189.

Collection method

Standard Collection

Acquisition

- Oscillation start: 0.00
- Number of images: 3600
- Exposure time (s): 0.1
- Oscillation range: 0.1
- Energy (keV): 8.4991
- Resolution (Å): 1.616
- First image: 1
- Kappa: 0.0
- Transmission (%): 100.0
- Detector mode:
- Phi: 0.0
- MAD
- Subwedge size:
- Shutterless
- Inverse beam

Data location

Folder: /storage/_usersdata/_usermx2/20170919/001/RAW_DATA

File name: TestSpeed_2_####.cbf

Prefix: TestSpeed

```

New PyQt + PyDM based UIs

Next steps...

→ Standardize common windows

✓ *To cover as many techniques as possible with single solution*

→ Access control

✓ *Different views for beamline technicians and researchers*

→ Web access

✓ *Proposed framework should facilitate migration to a web interface solution*
