
**PRESENT STATUS OF THE KEK
INJECTOR UPGRADE
FOR THE FAST BEAM-MODE SWITCH**

**M. Satoh, KEK
for the Injector Upgrade (IUC) WG
members**

KEK Injector Linac:

- J-like shaped Linac (600-m-long)
- Injector for the four independent rings:
 - PF (2.5-GeV e-/ 0.1-nC) Twice/ day
 - PF-AR (3-GeV e-/ 0.2-nC) Twice/ day
 - KEKB HER (8-GeV e-/ 1-nC) Continuous Injection Mode (CIM)
 - KEKB LER (3.5-GeV e+/ 1-nC) CIM

KEKB Injection (CIM)

- Frequent Switch of Linac Beam-Mode (parameters):

KEKB CIM Mode

- Many parameters should be changed.
- Timing
- LLRF Phase
- Magnet parameter
- etc.

• Beam-mode switch time should be drastically reduced for the KEBK CIM and PF Top-up.

Fast Beam-Mode Switch using = Multi-Energy Linac Scheme =

- **Magnetic Field :**
 - **Common Parameter (Q and Steering magnets)**
- **Fast Energy Adjustment :**
 - **Fast Control of Low-Level RF phase**

Subsystems R&D

e⁺ target with a hole for
a fast switch between e⁻ and e⁺

W crystalline target ($\Phi 4.5$ mm)

Hole ($\Phi 5$ mm) for e⁻ mode
