

Beam Dynamic of Accelerator for CiADS & Commissioning of CAFe

Yuan He

On behalf of Joint Accelerator Team of ADS
Institute of Modern Physics, CAS

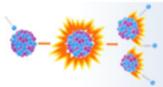

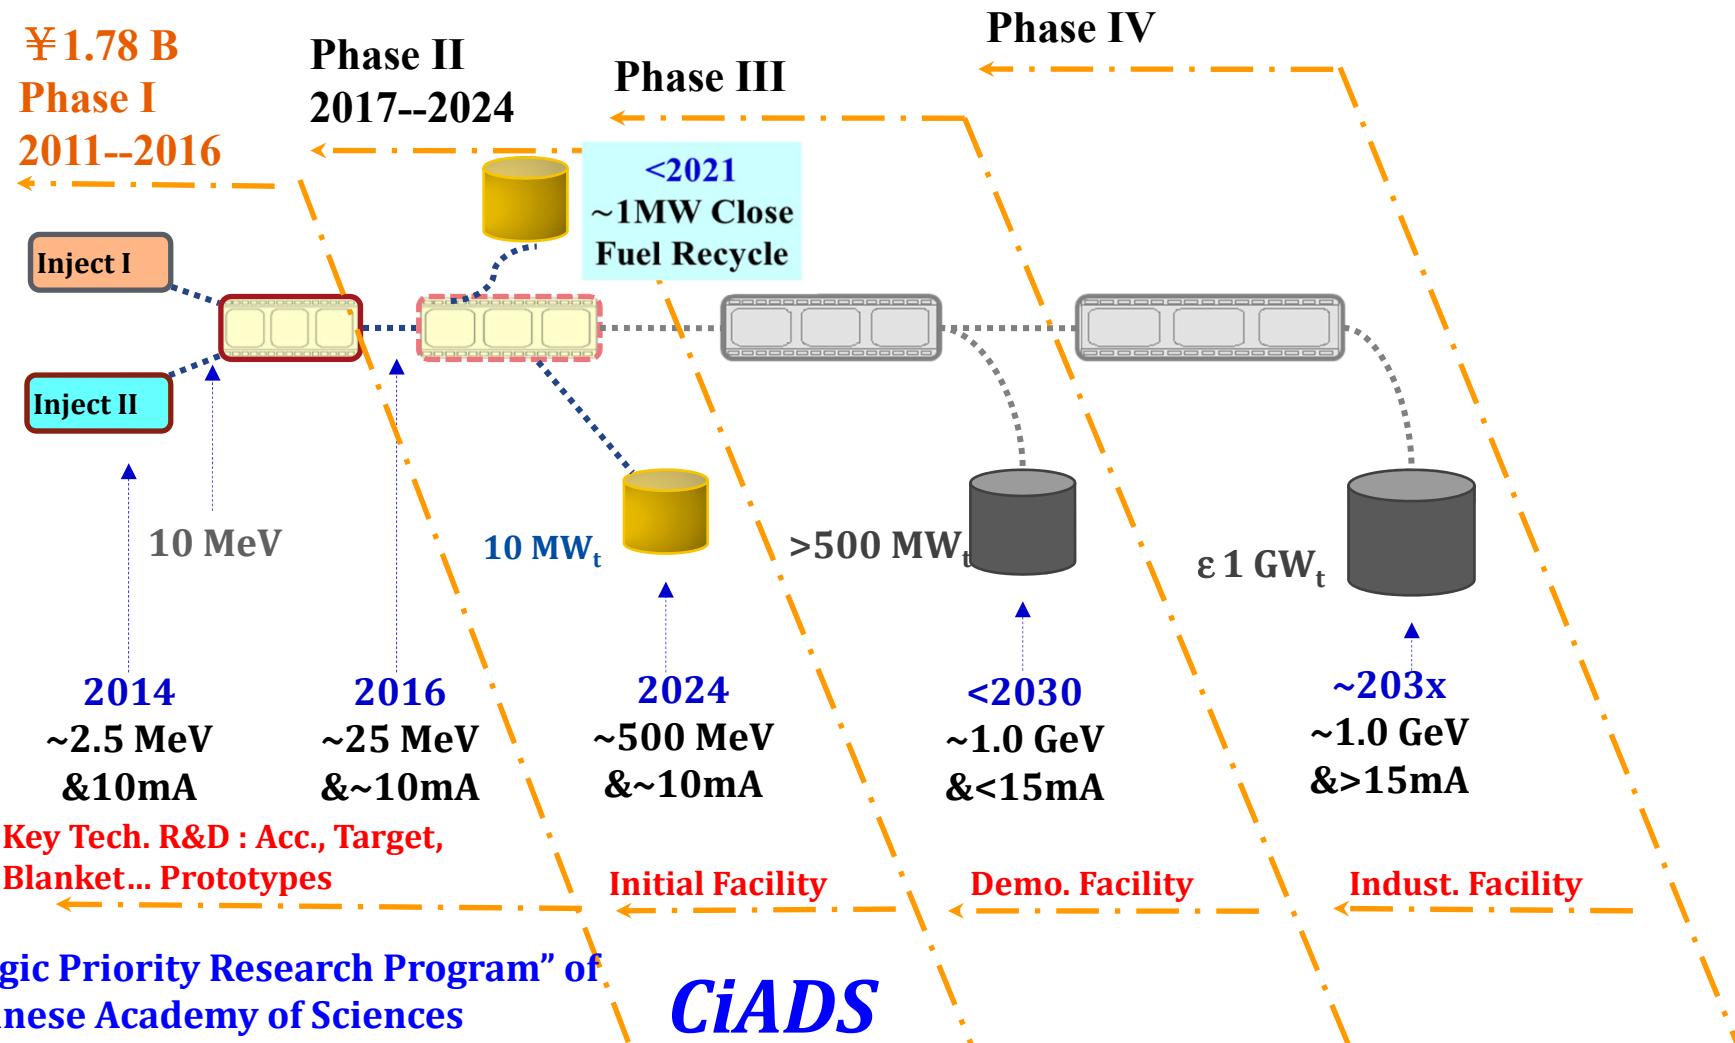

Outline

- ▶ **Introduction of CiADS**
- ▶ Design of superconducting Linac
- ▶ Beam commission of Chinese ADS
Front-end Demo Linac (CAFe)
- ▶ Summary

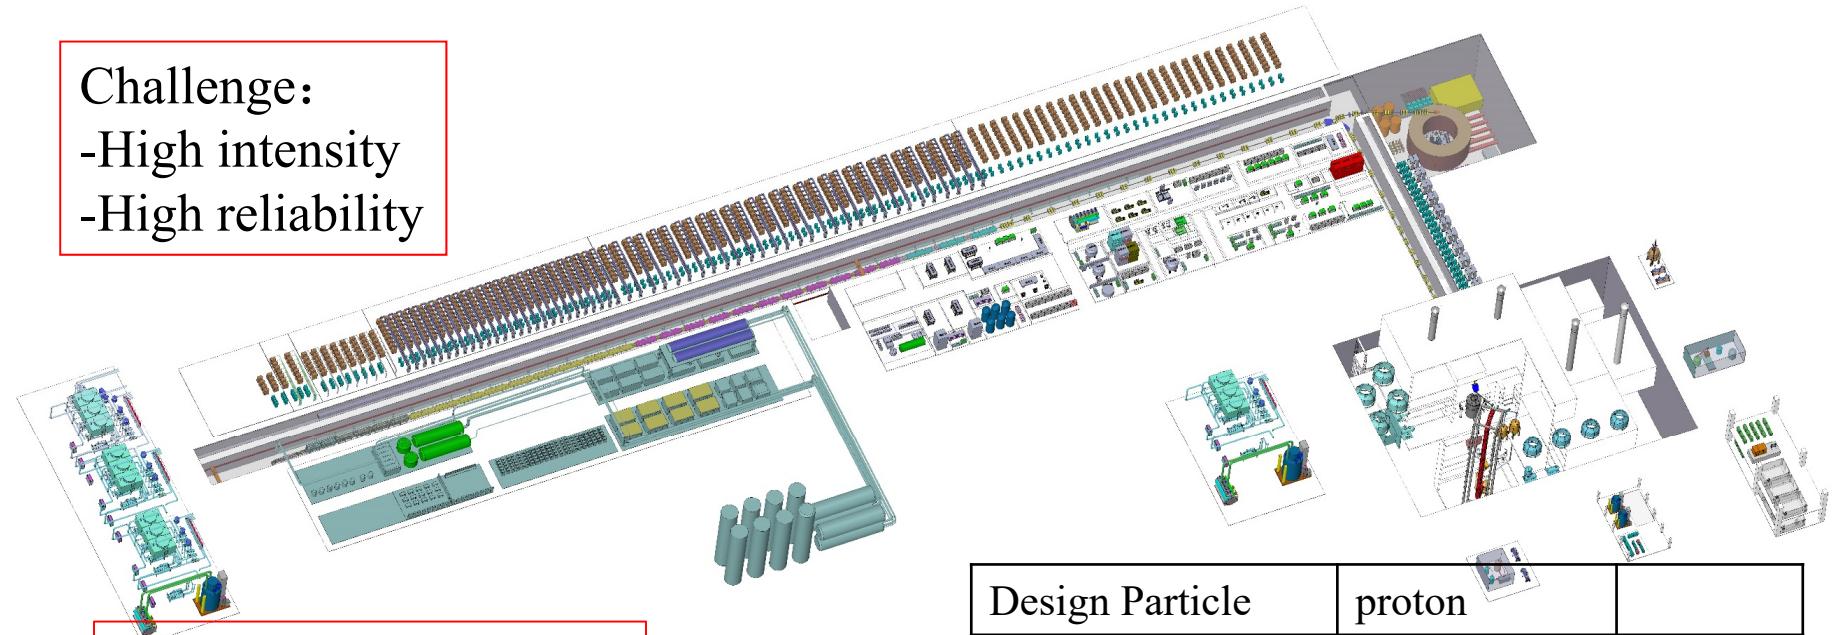

CiADS Project (2018-2024)

The first demonstration of ADS at MWs level

Challenge:

- High intensity
- High reliability

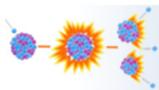

Only one injector
Non-local compensation

Beam trips goal:

<10s,	-
10s~5min,	2500/y
>5min,	300/y

Design Particle	proton	
Energy	500 (250)	MeV
Beam current	5 (10)	mA
Beam power	2.5	MW
Operation mode	CW&Pulse	
Beam loss	<0.1	W/m
Reactor power	7.5	MWt

CIADS Project (2017-2024)

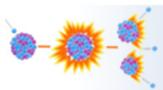

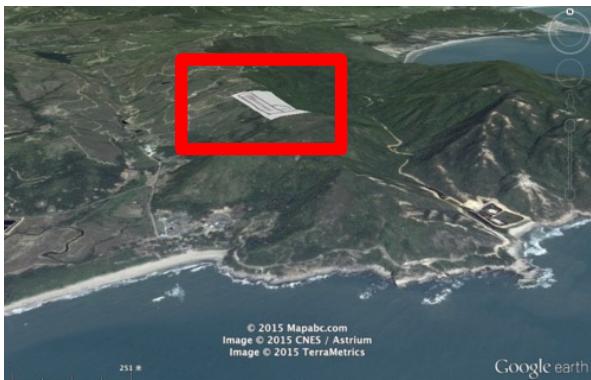

China initiative Accelerator Driven System (CiADS)

- Approved in Dec. 2015
- Leading institute: IMP
- Budget: >1.8B CNY (Gov. and Corp.)
- Location: Huizhou, Guangdong Prov.
- Contribution Partners:
CIAE, CGN, IHEP, CASHIPS, etc.

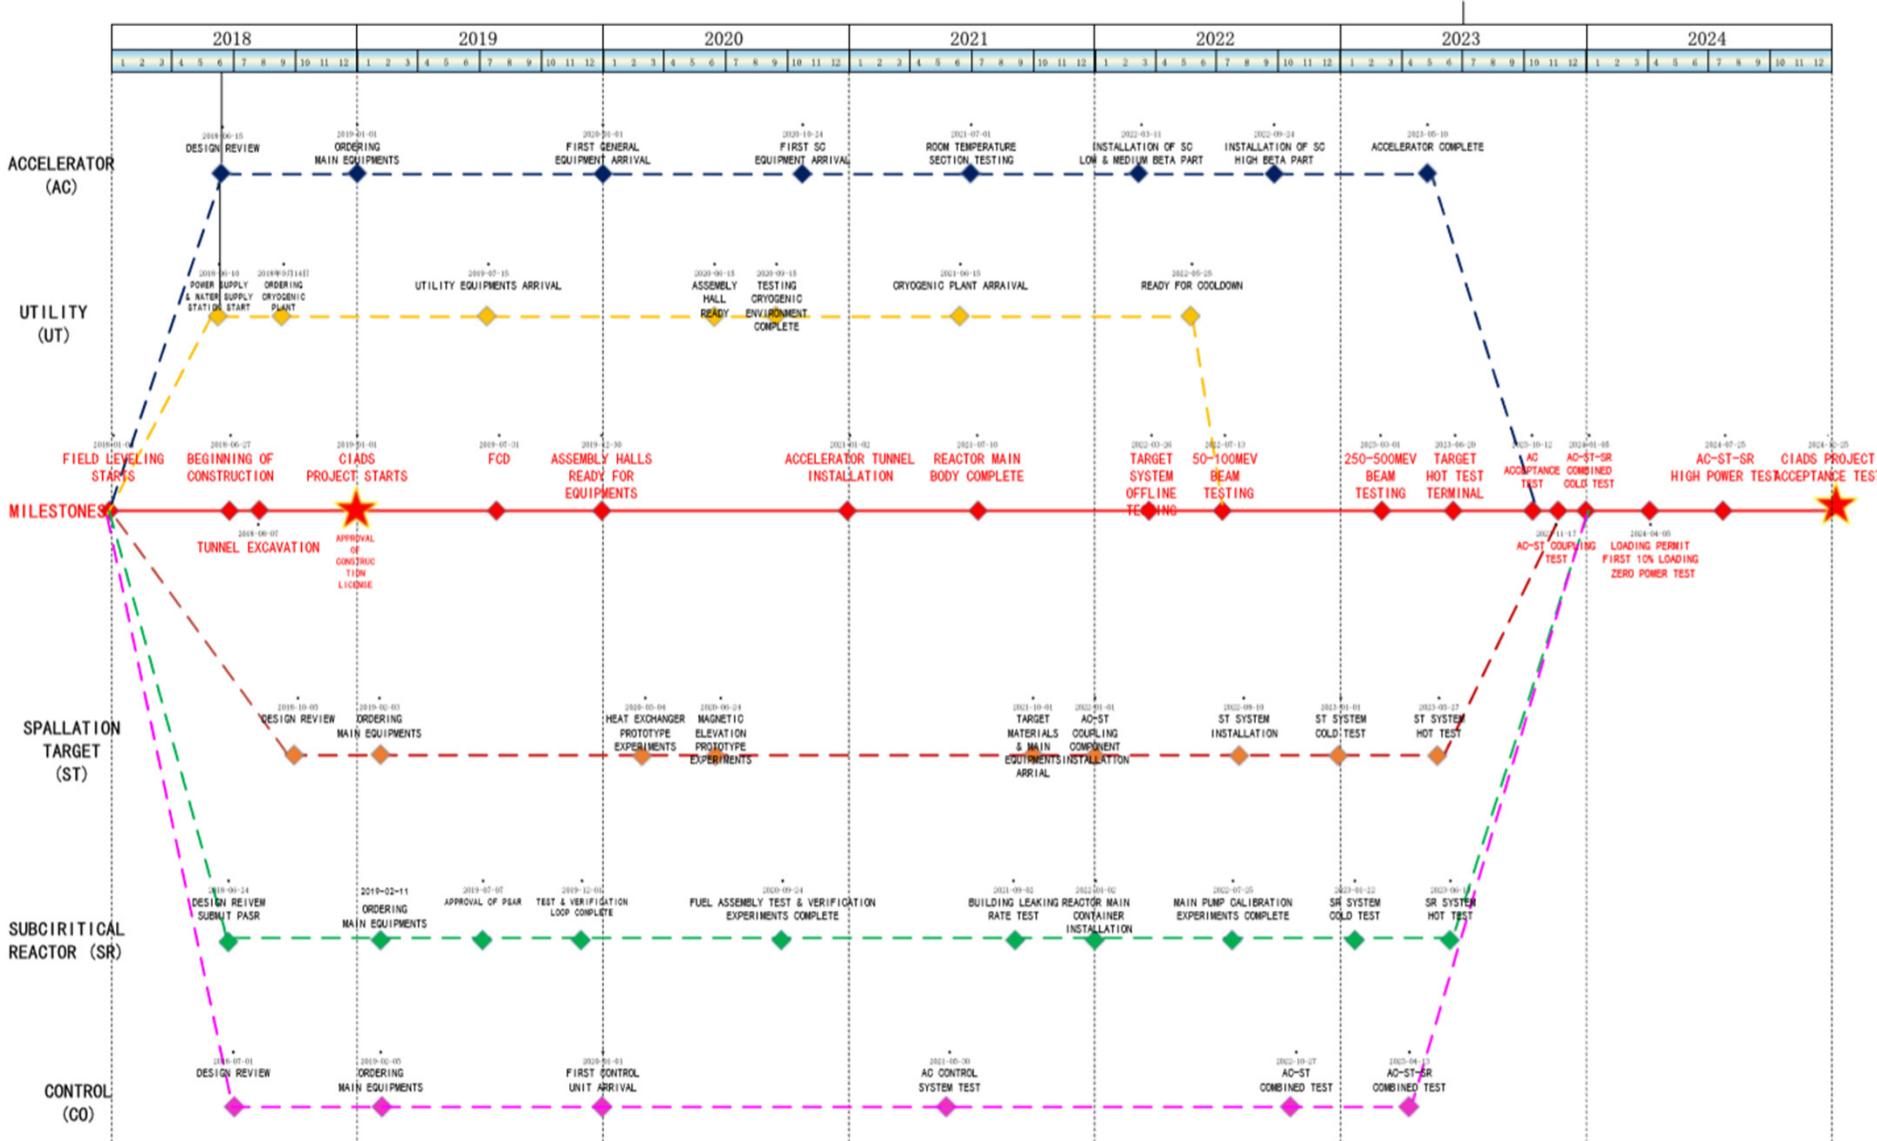

Location is in Huizhou city, Guangdong Province, 73 km away from Huizhou and 140 km away from Shenzhen. The site is on the top of hill, latitude is around 150m, facing the South See and backing on the mountain. The High Intensity Heavy Ion Accelerator Facility (HIAF) is in the same campus.

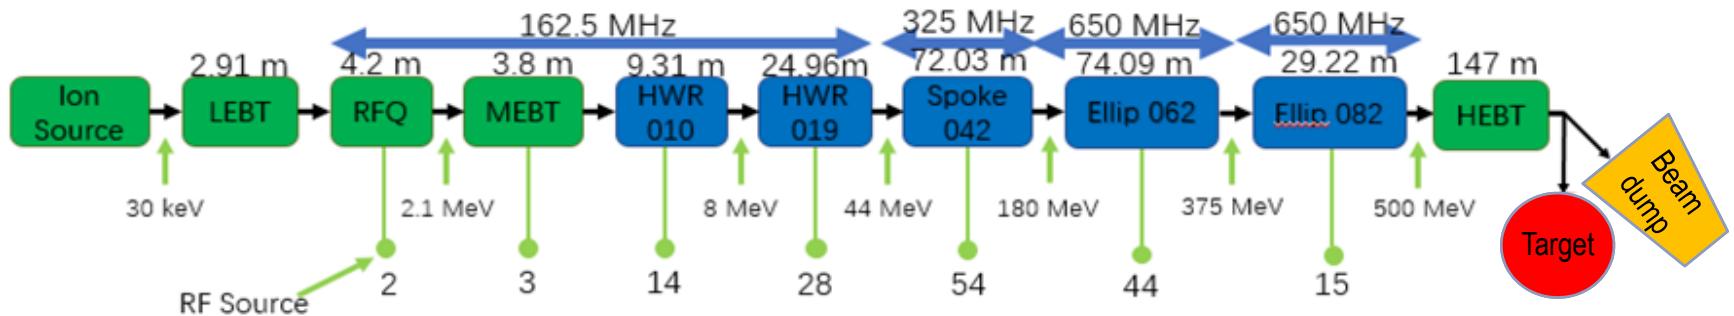

Schedule of CiADS

- ▶ Introduction of CiADS
- ▶ Design of superconducting Linac
- ▶ Beam commission of Chinese ADS
Front-end Demo Linac (CAFe)
- ▶ Summary

General configuration of CiADS Linac

The design consideration :

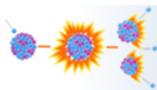

- reliability-oriented design
- The extremely beam loss control (< 0.1W/m)
- Based on the experience of beam commissioning

Specifies at sections:

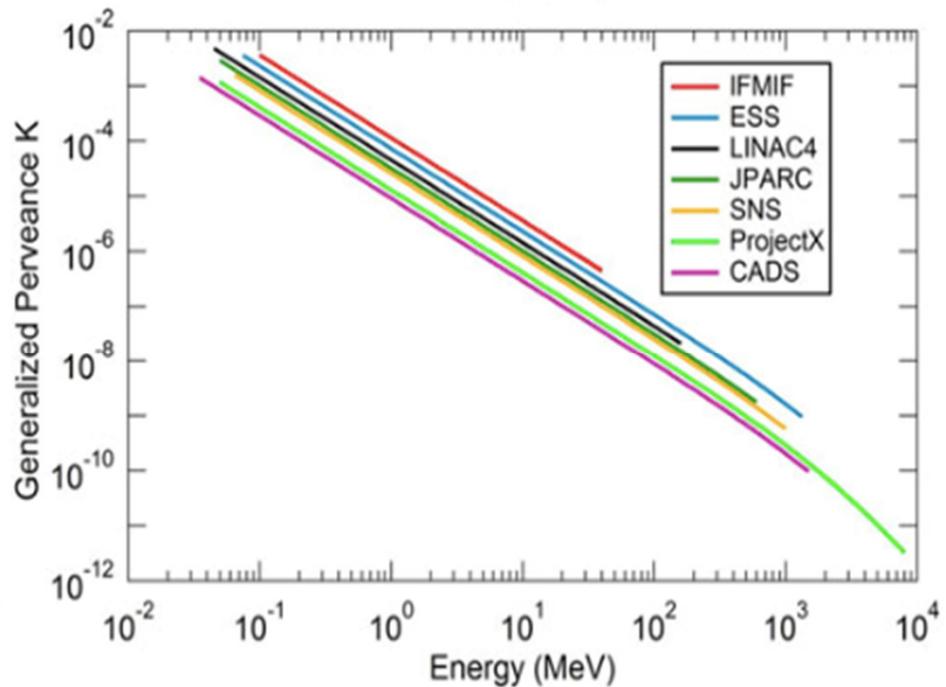

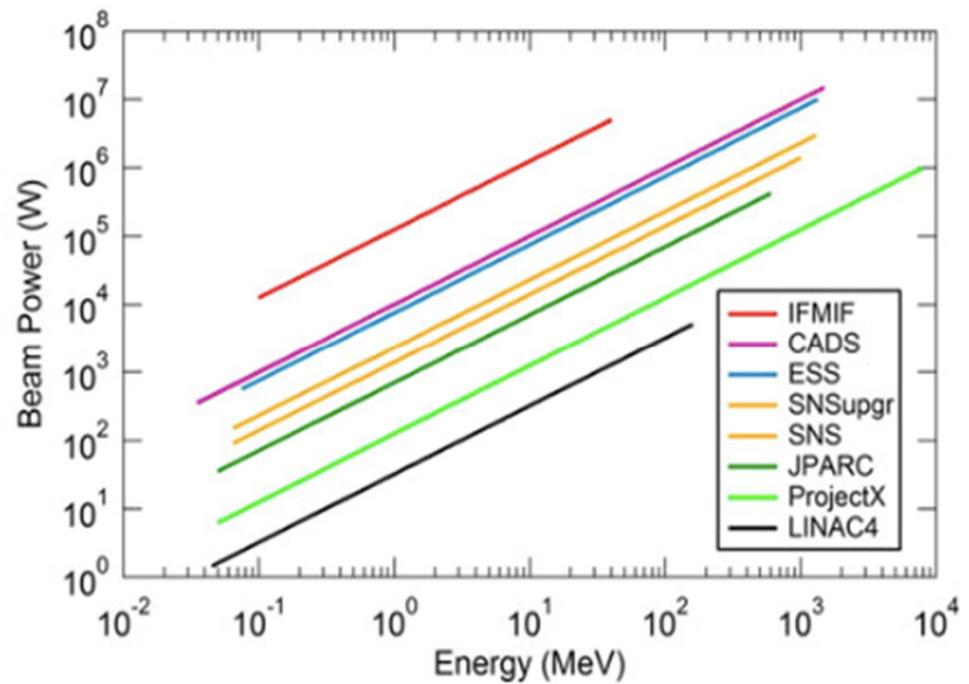

- Rt front end: beam quality control and re-built
- Sc-linac: high redundancy, compensation
- Beam on target: homogenies scanning

General parameters

Particle	proton	
Energy	500	MeV
Beam current	5	mA
Beam power	2. 5	MW
RF frequency	162. 5/325/ 650	MHz
Operation mode	CW&Pulse	
Beam loss	<0. 1	W/m
Total length	367. 5	m

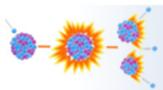

General characteristics of ADS linac

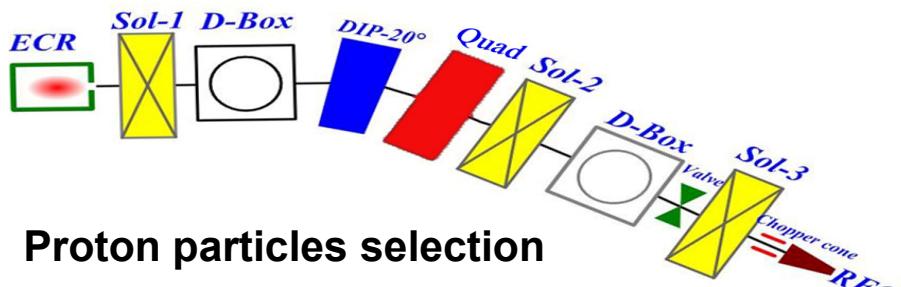

Compared with existing proton linac, ADS linac is **high average power** and **low intensity**.

Beam loss & beam loading dominated accelerator !

P.A.P. NGHIEM, et al , Advanced concepts and methods for very high intensity accelerators

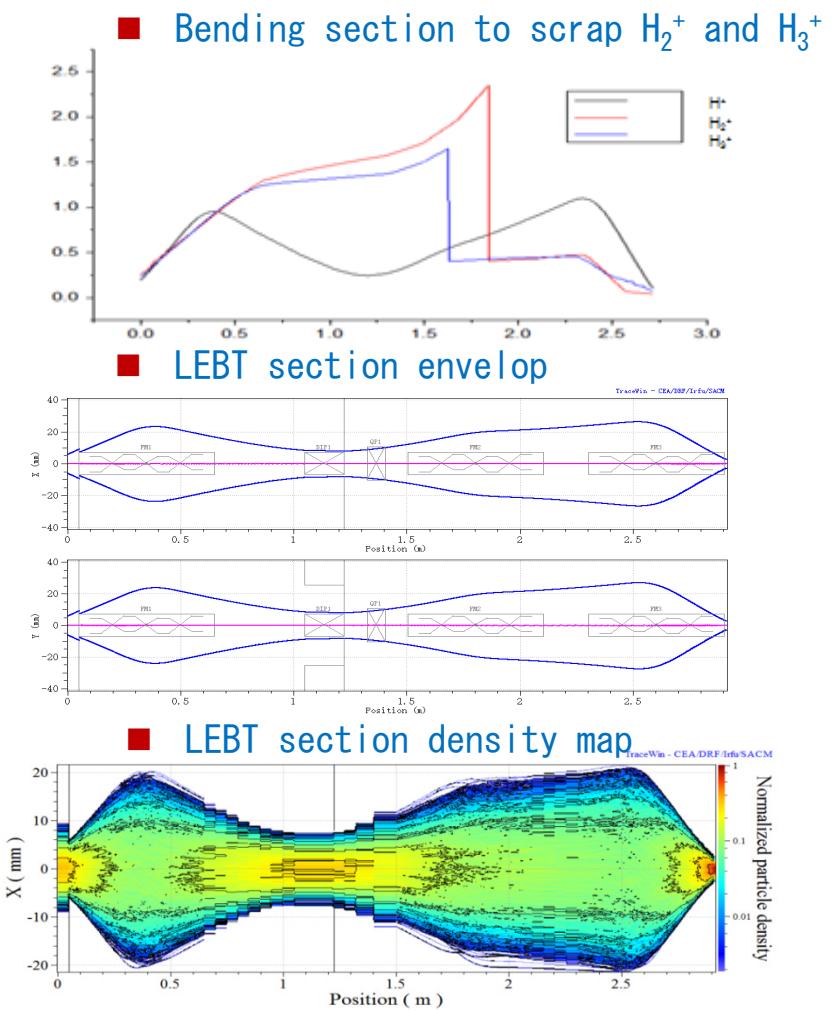

LEBT design

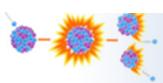

- Proton particles selection
- Collimation for beam loss control
- Beam symmetrical injection
- Match between IS and RFQ
 - IS&LEBT design parameter

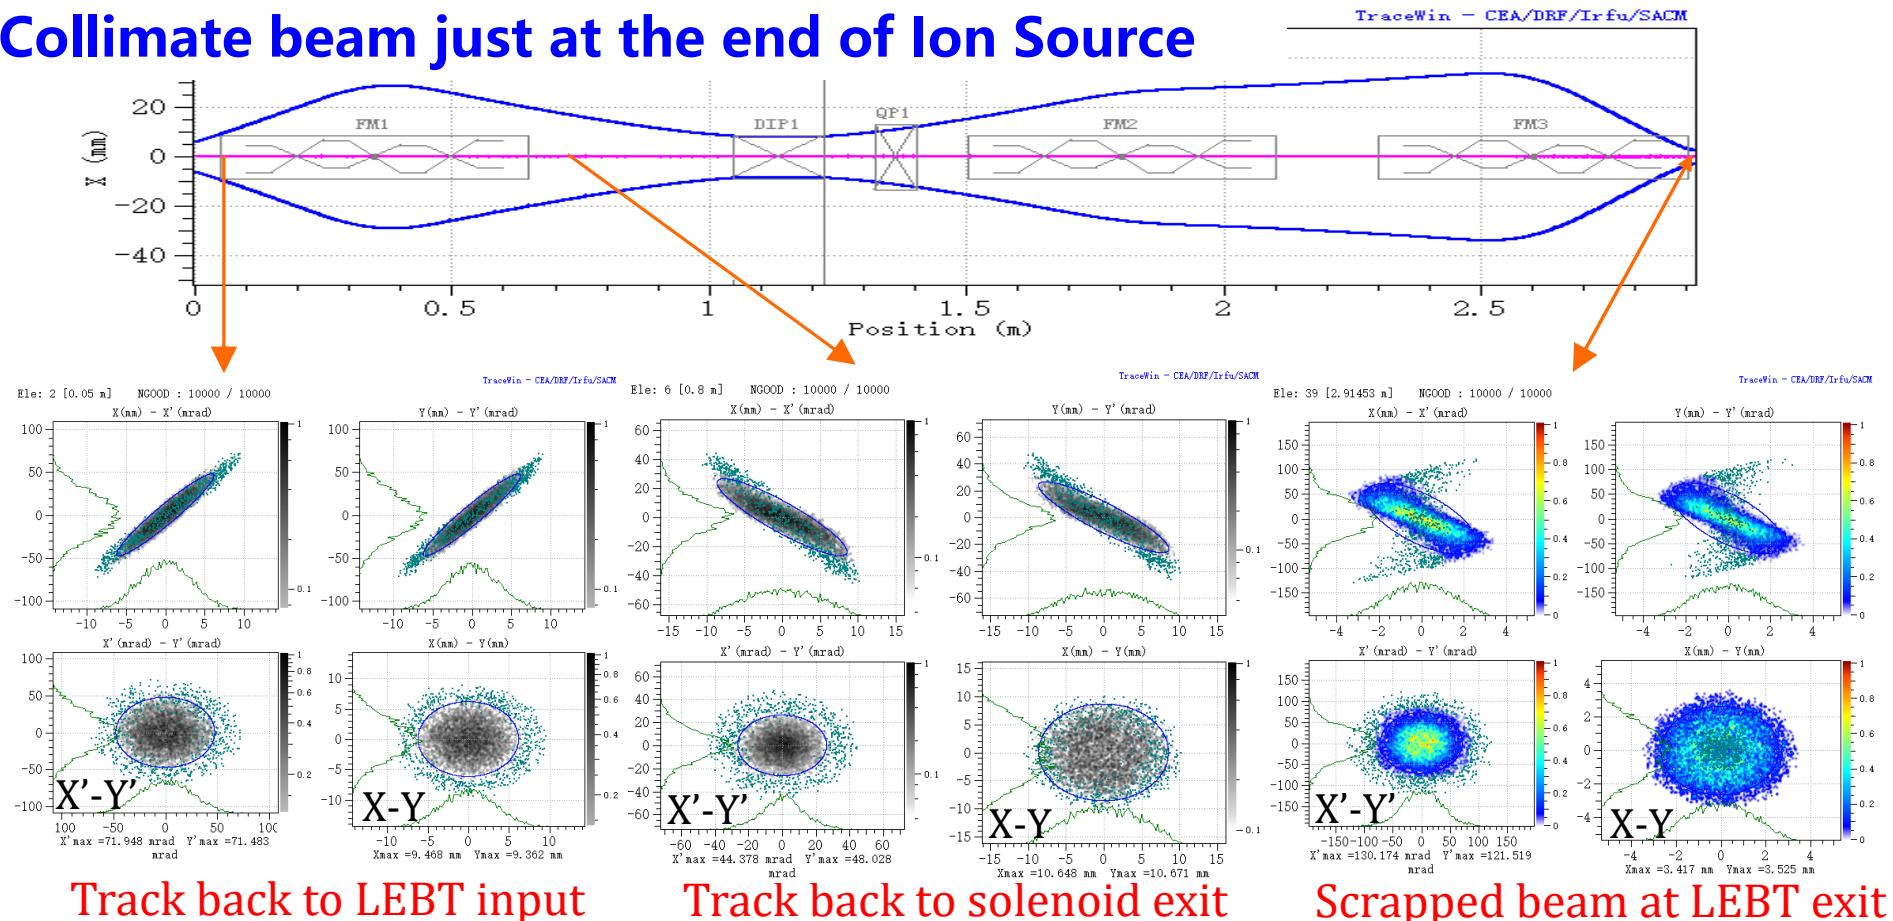

Inject energy (keV)	35
Beam current (mA)	20
Horizontal normal emittance ($\pi\text{mm}\cdot\text{mrad}$)	0.19
Energy spread	$\leq 0.5\%$
Extract beam stability	$< 1\%$
Total length (m)	2.9

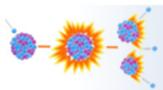

Designed 20° bending magnet + 6.3° edge angle to ensure proton beam purification and also achieve both horizontal and vertical direction beam symmetrical matching.

Collimate beam just at the end of Ion Source

Marking the target scrapped beam particles at LEBT exit and tracking back these particles to the entrance of the LEBT and the first solenoid exit, it will find that these “tail” particles exactly the ones outside of the beam aperture at the LEBT entrance, and it can not be scrapped at other section of the LEBT.

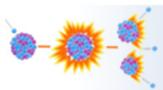

RFQ design

WG-B, 17:30, W. Dou

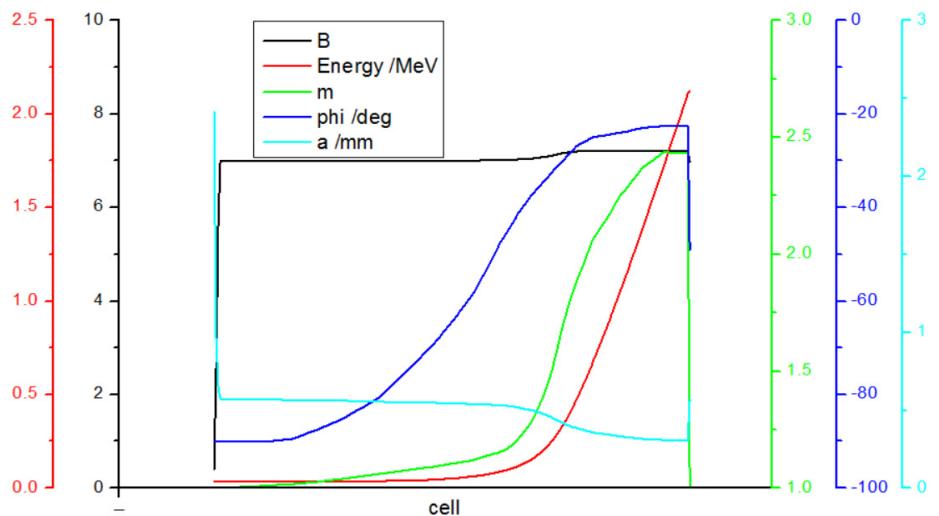

- ① Low frequency and low RF power to improve the long-term operational stability
- ② Low Kilpatrick coefficient
- ③ High acceleration efficiency and high transmission efficiency
- ④ The RFQ lattice optimization to minimize the beam loss power
- ⑤ Aim to 99.99% longitudinal emittance, to decrease the beam loss probability in high energy superconducting section.

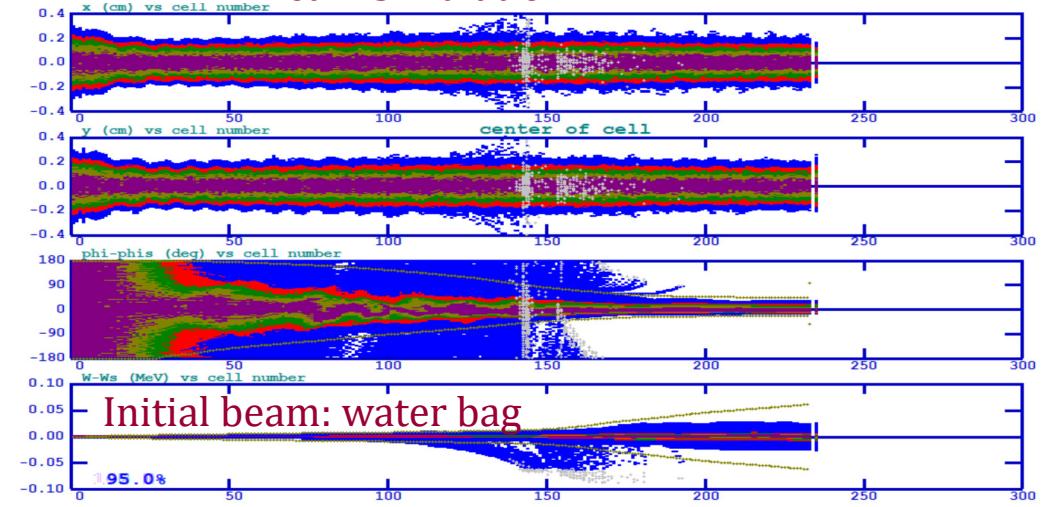

Frequency (MHz)	162.5
Beam current (mA)	15
I/O energy(MeV)	0.035 / 2.1
Vane voltage(kV)	65
Max. surface.field (MV/m)	15.88
Average aperture(mm)	5.71
Min aperture (mm)	0.308
Iinput.Nor.RMS.emit ($\pi\text{mm}\cdot\text{mrad}$)	0.2/0.2/-
Ouput.Nor.RMS.emit ($\pi\text{mm}\cdot\text{mrad}$)	0.21/0.21/0.25
Output.99.9% longitudinal emit ($\pi\text{mm}\cdot\text{mrad}$)	4.98
Length (m)	4.57
Transmission efficiency@15mA (%)	95.0%

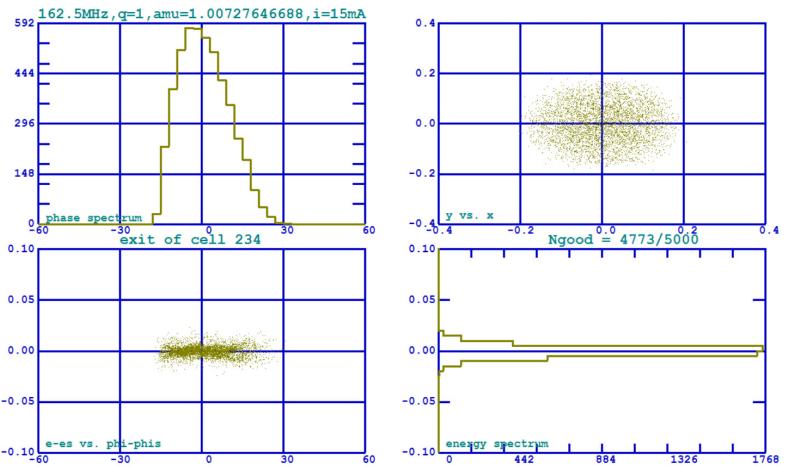

RFQ key parameters

Beam simulation

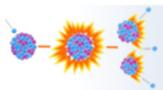

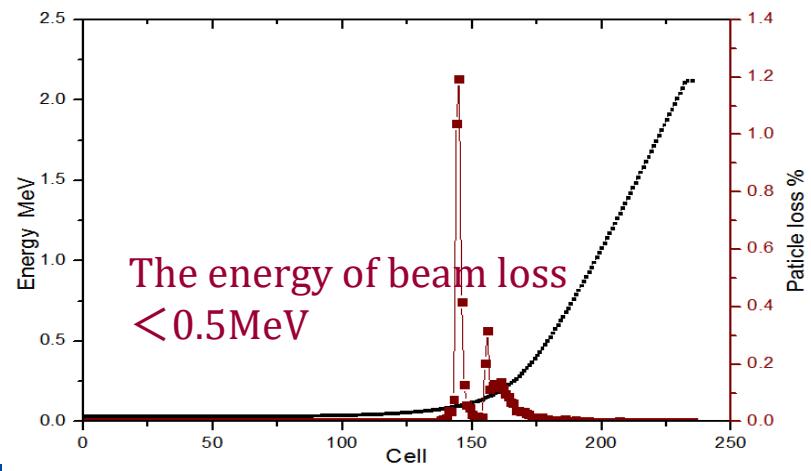

Longitudinal phase space

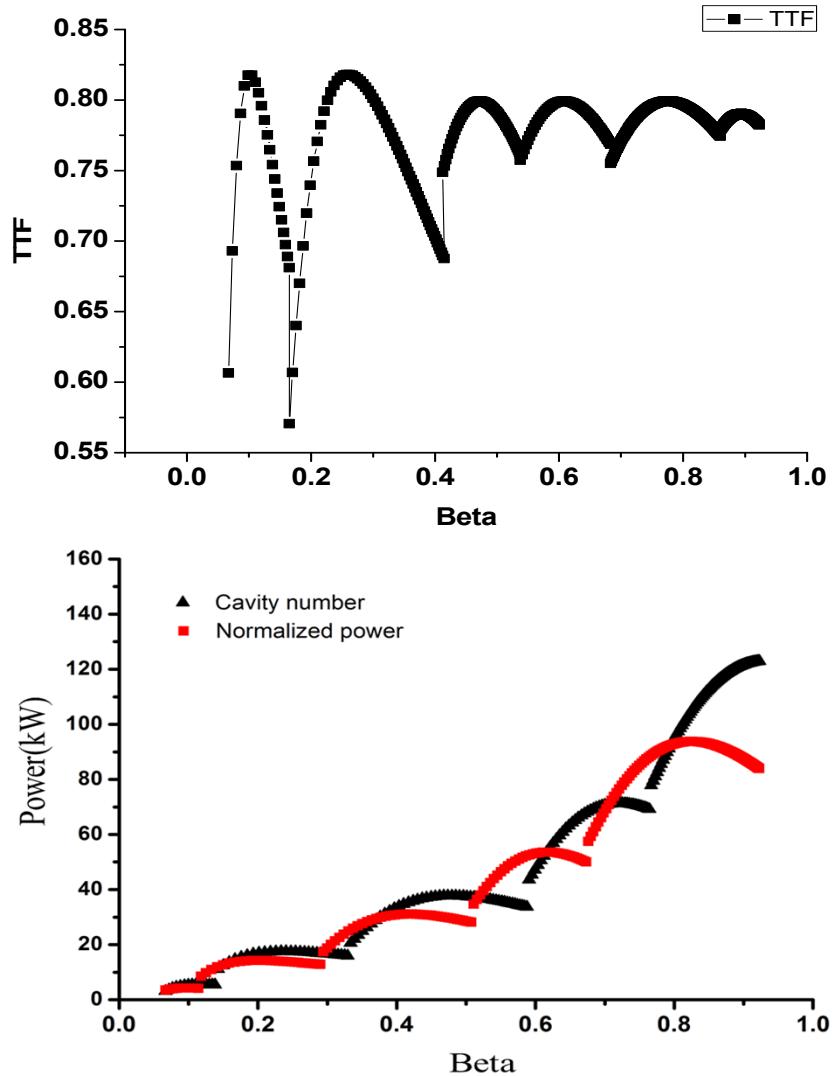

99.99%longitudinal : $4.98 \pi \text{mm.mrad}$

The acceptance : $\sim 27 \pi \text{mm.mrad}$

The ratio: $\sim 1/5.4$

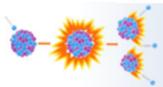

- Consideration :

 1. limit the TTF value, $TTF > 0.6$
 2. Make TTF value of each equal as far as possible
 3. PSO was employed to optimize the cavity family and beta
 4. Limit the max RF power for single cavity

$$\sum_{i=1}^l \frac{P_i}{l * P_{\max}} + \sum_{i=1}^m \frac{P_i}{m * P_{\max}} + \dots + \sum_{i=1}^n \frac{P_i}{n * P_{\max}}$$

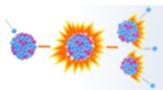

SC section design

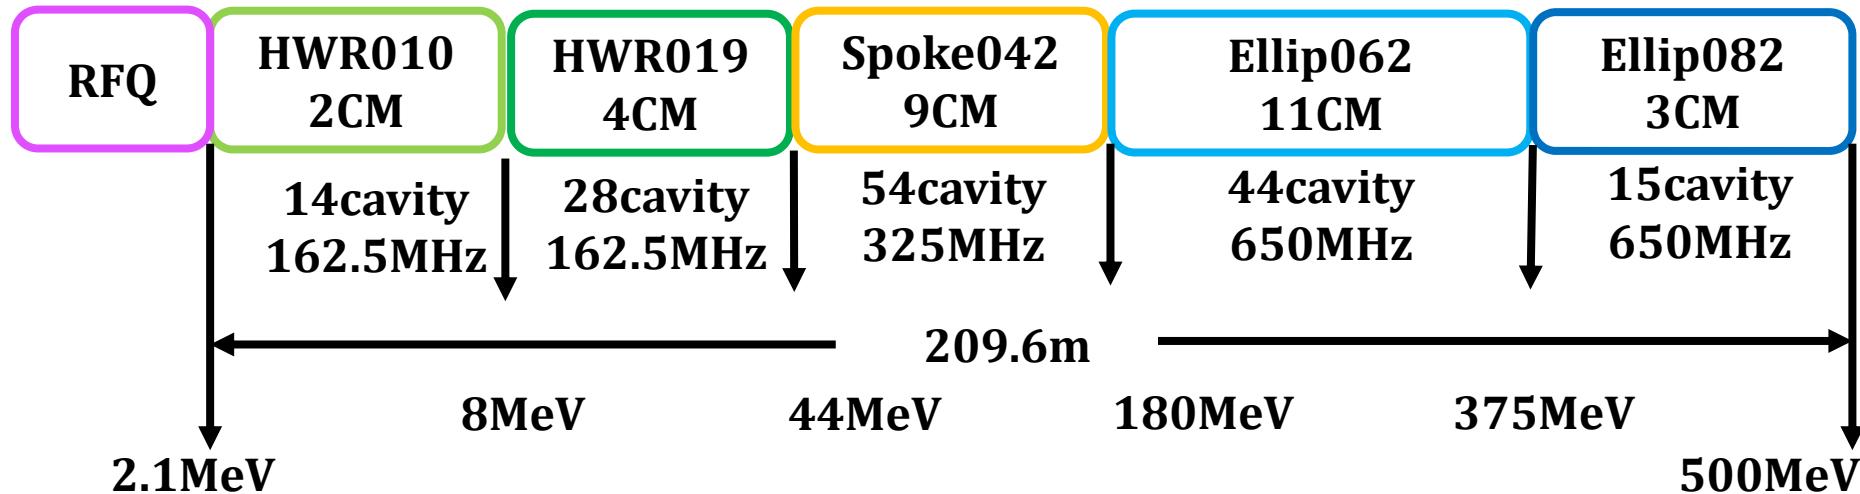

inject / extract energy (MeV)	2.1 / 500
Beam current (mA)	5
Frequency (MHz)	162.5
aperture / RMS transverse beam size	>10
Synchronous phase / RMS beam length	>9
Entrance normal RMS emittance(mmmrad)	0.216/0.216 /0.25

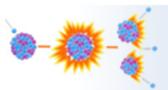

- ◆ Compact structure **at low energy section** to get large longitudinal acceptance and to weaken the effect from space charge
- ◆ Full period lattice structure **at high energy section** for good matching
- ◆ Optimization at the location of **structure transition** and **frequency jump** for good matching

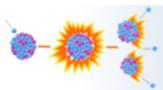

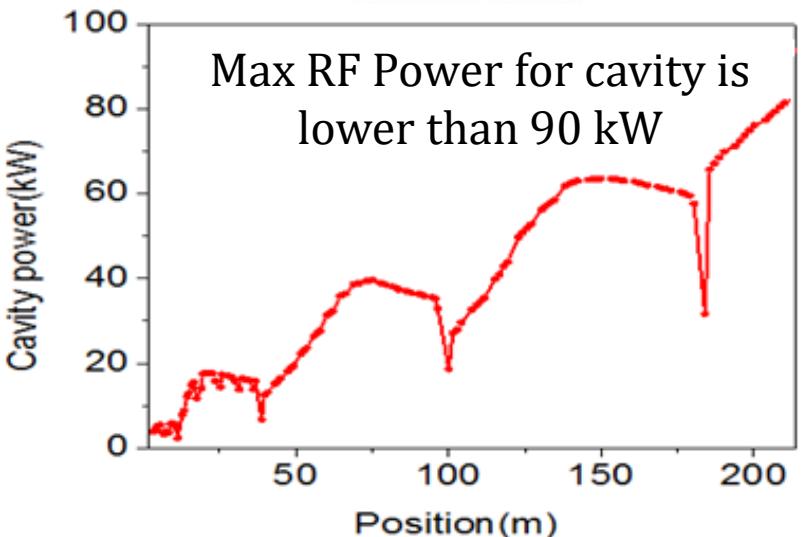

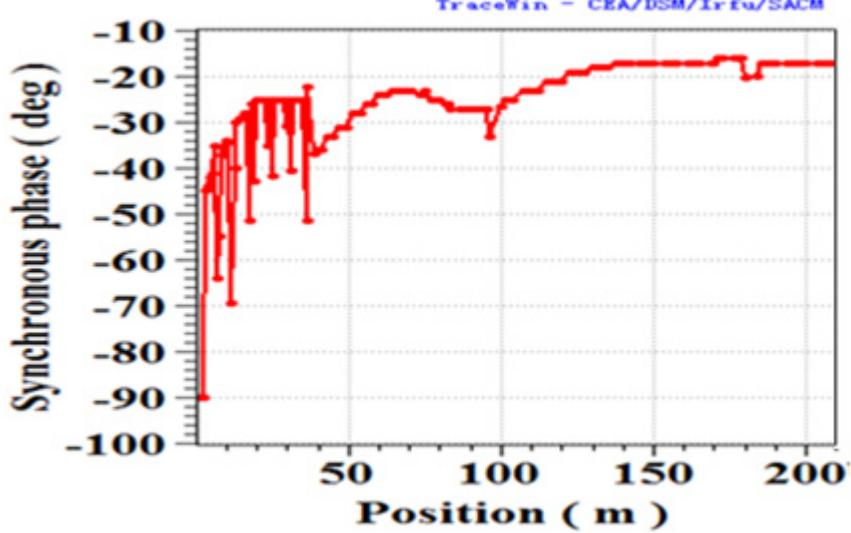

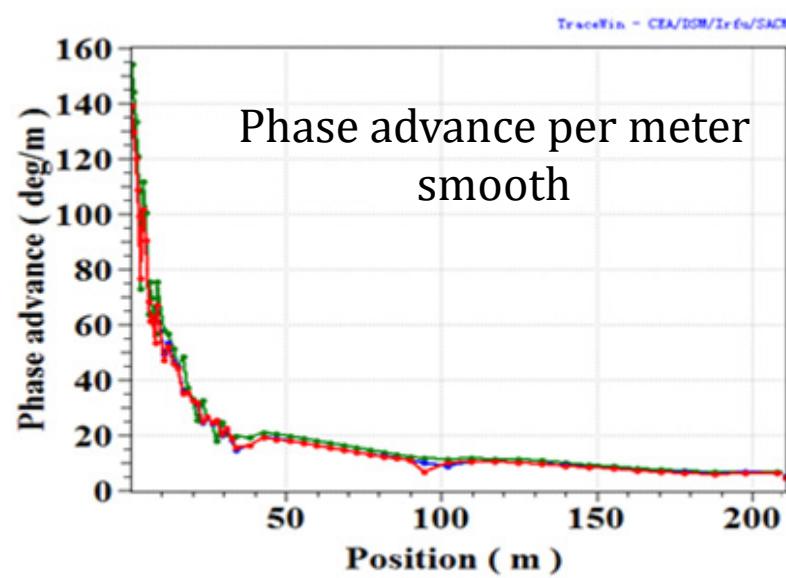

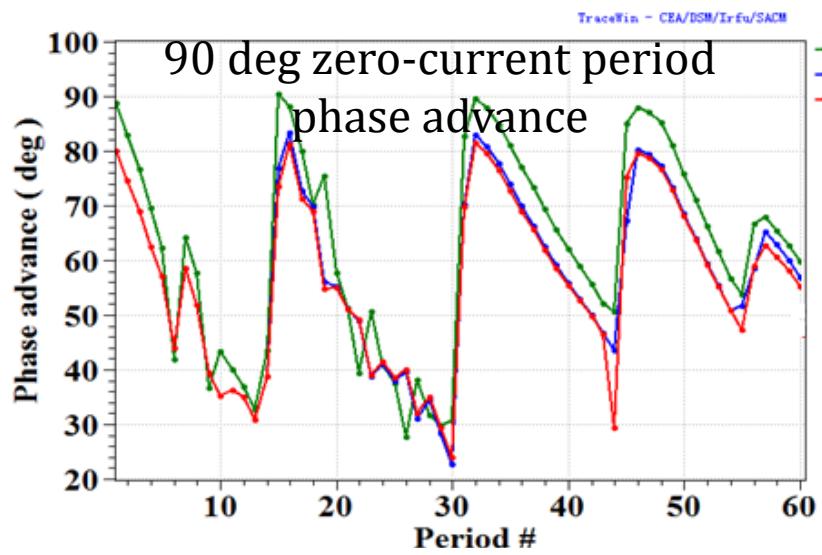

SC section design

	Unit	HWR010	HWR019	SPOKE042	Ellip062	Ellip082
f	MHz	162.5	162.5	325	650	650
type		Sqreezed	Taper	Double	5 cells	5 cells
Vmax	MV	1.0	2.5	6.5	13	20

Beam Commissioning since 2014

Beam Commissioning since 2014

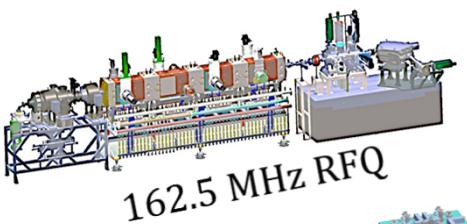

1

- ECRIS + RFQ
- Energy is ~**2.1 MeV**
- First beam **Jun. 6th, 2014**;
- **achievement 10 mA, 2.1 MeV, 4.5 hours**

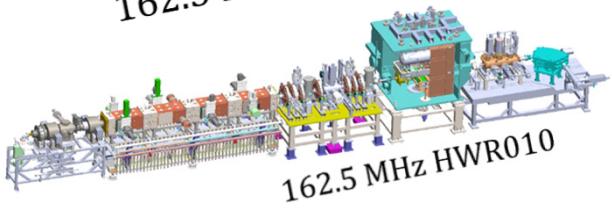

Beam Commissioning since 2014

1

- ECRIS + RFQ
- Energy is ~**2.1 MeV**
- First beam **Jun. 6th, 2014**;
- **achievement 10 mA, 2.1 MeV, 4.5 hours**

2

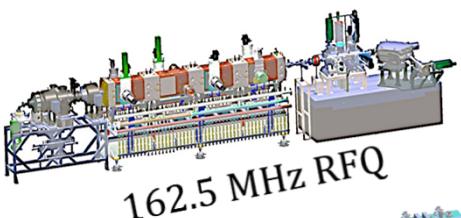

- ECRIS + RFQ + MEBT + TCM1 (single HWR)
- Energy is ~**2.5 MeV**
- First beam **October 1st, 2014**;
- **achievement 11 mA, 2.55 MeV**

Beam Commissioning since 2014

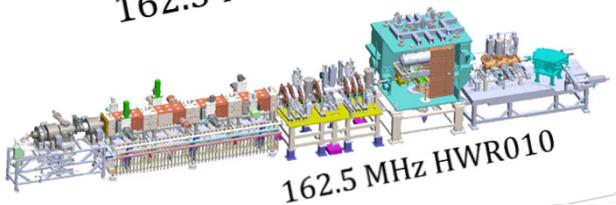

1

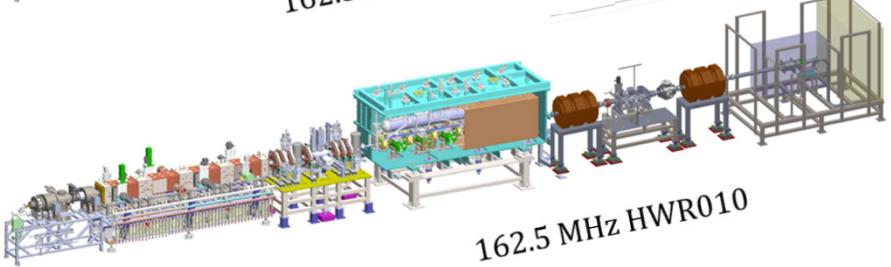

- ECRIS + RFQ
- Energy is ~2.1 MeV
- First beam Jun. 6th, 2014;
- achievement 10 mA, 2.1 MeV, 4.5 hours

2

- ECRIS + RFQ + MEBT + TCM1 (single HWR)
- Energy is ~2.5 MeV
- First beam October 1st, 2014;
- achievement 11 mA, 2.55 MeV

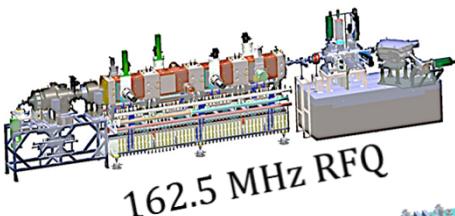

3

- ECRIS + RFQ + TCM6
- Energy is ~5 MeV
- First beam June 6th, 2015;
- achievement 2.7 mA, 5.3 MeV; ~7.5 hours
2 mA 4 MeV operation

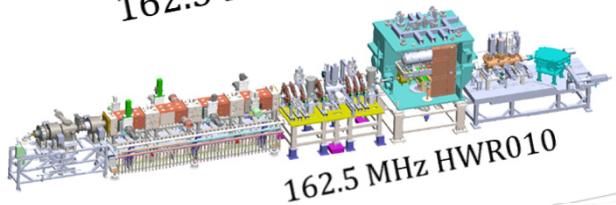

Beam Commissioning since 2014

1

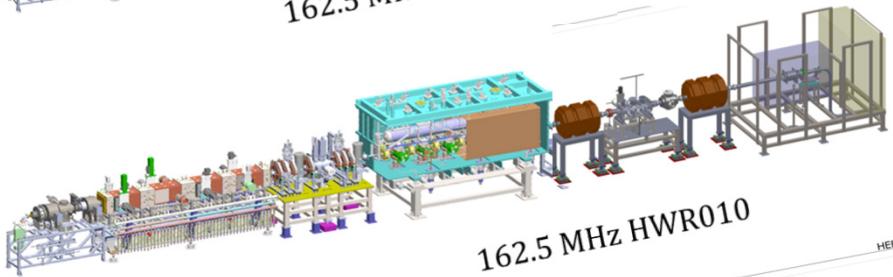

- ECRIS + RFQ
- Energy is ~2.1 MeV
- First beam Jun. 6th, 2014;
- achievement 10 mA, 2.1 MeV, 4.5 hours

2

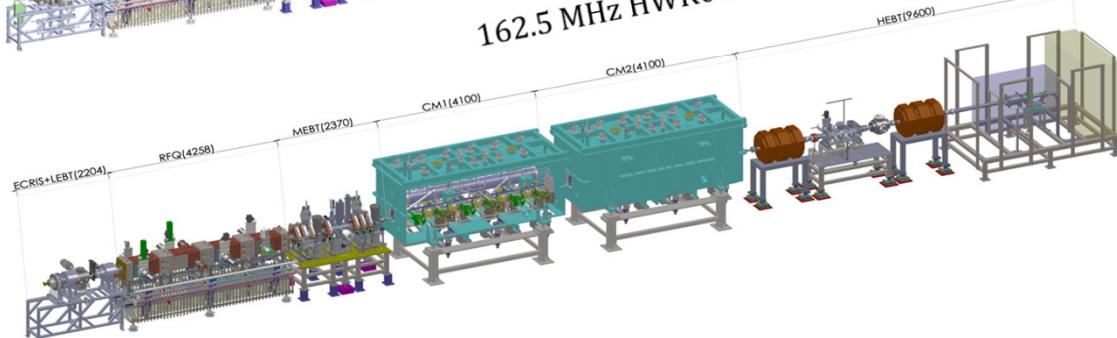

- ECRIS + RFQ + MEBT + TCM1 (single HWR)
- Energy is ~2.5 MeV
- First beam October 1st, 2014;
- achievement 11 mA, 2.55 MeV

3

- ECRIS + RFQ + TCM6
- Energy is ~5 MeV
- First beam June 6th, 2015;
- achievement 2.7 mA, 5.3 MeV; ~7.5 hours 2 mA 4 MeV operation

4

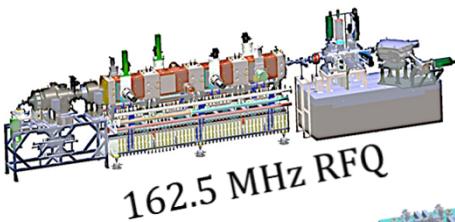

- ECRIS + RFQ + CM1 + CM2
- Energy is ~10 MeV
- First beam September 15th, 2016
- Achievement ~ 2.7 mA, 9.55 MeV

Beam Commissioning since 2014

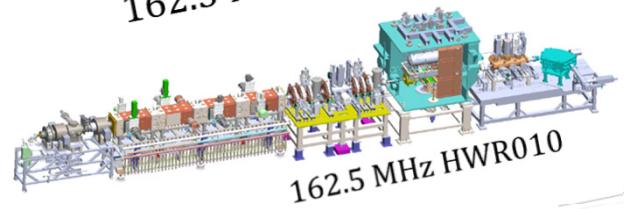

1

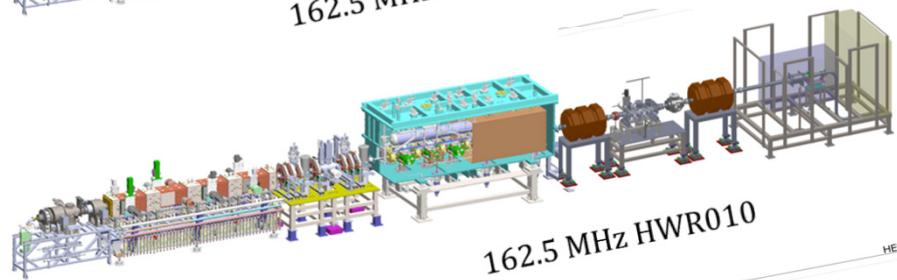

- ECRIS + RFQ
- Energy is ~2.1 MeV
- First beam Jun. 6th, 2014;
- achievement 10 mA, 2.1 MeV, 4.5 hours

2

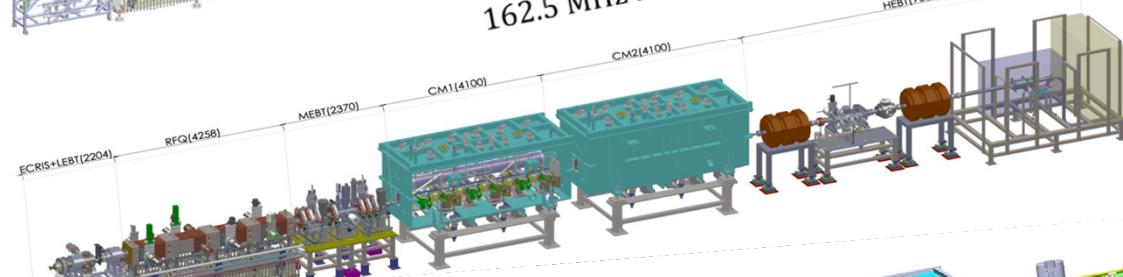

- ECRIS + RFQ + MEBT + TCM1 (single HWR)
- Energy is ~2.5 MeV
- First beam October 1st, 2014;
- achievement 11 mA, 2.55 MeV

3

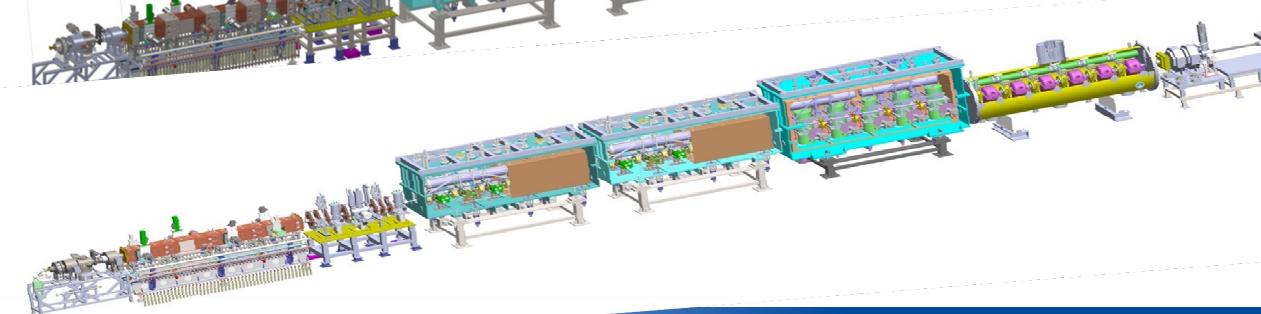

- ECRIS + RFQ + TCM6
- Energy is ~5 MeV
- First beam June 6th, 2015;
- achievement 2.7 mA, 5.3 MeV; ~7.5 hours 2 mA 4 MeV operation

4

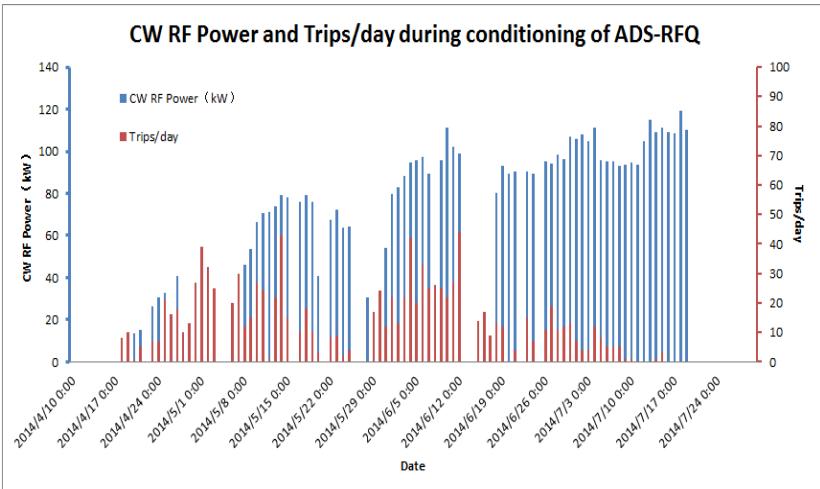

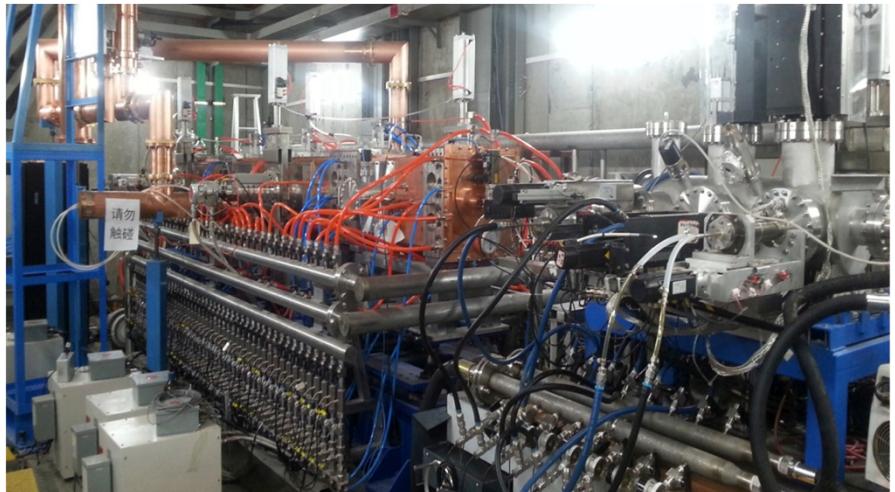

- ECRIS + RFQ + CM1 + CM2
- Energy is ~10 MeV
- First beam September 15th, 2016
- Achievement ~ 2.7 mA, 9.55 MeV

5

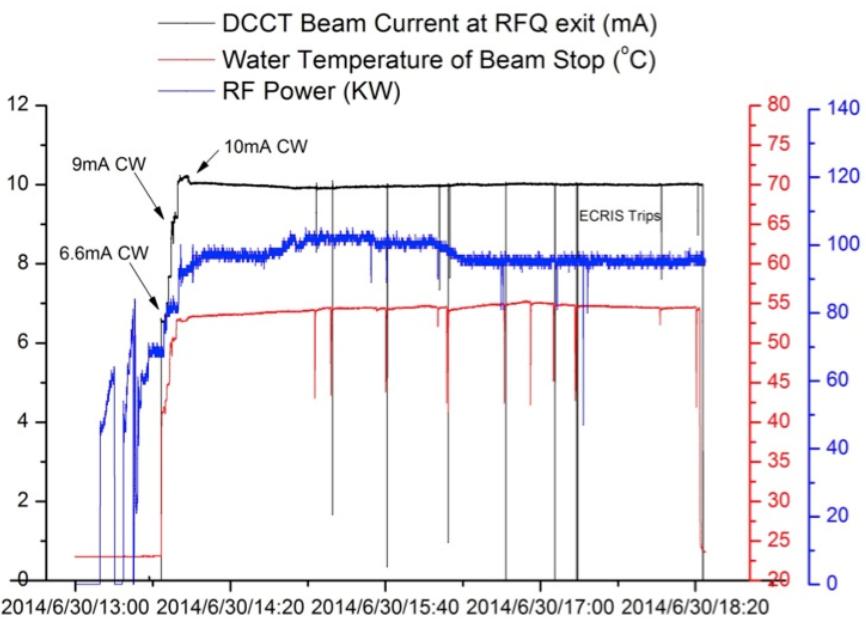

- ECRIS + RFQ + CM1 + CM2 + CM3 + CM4
- Energy is ~25 MeV
- First beam May 28th, 2017
- Achievement 0.2 mA 25 MeV

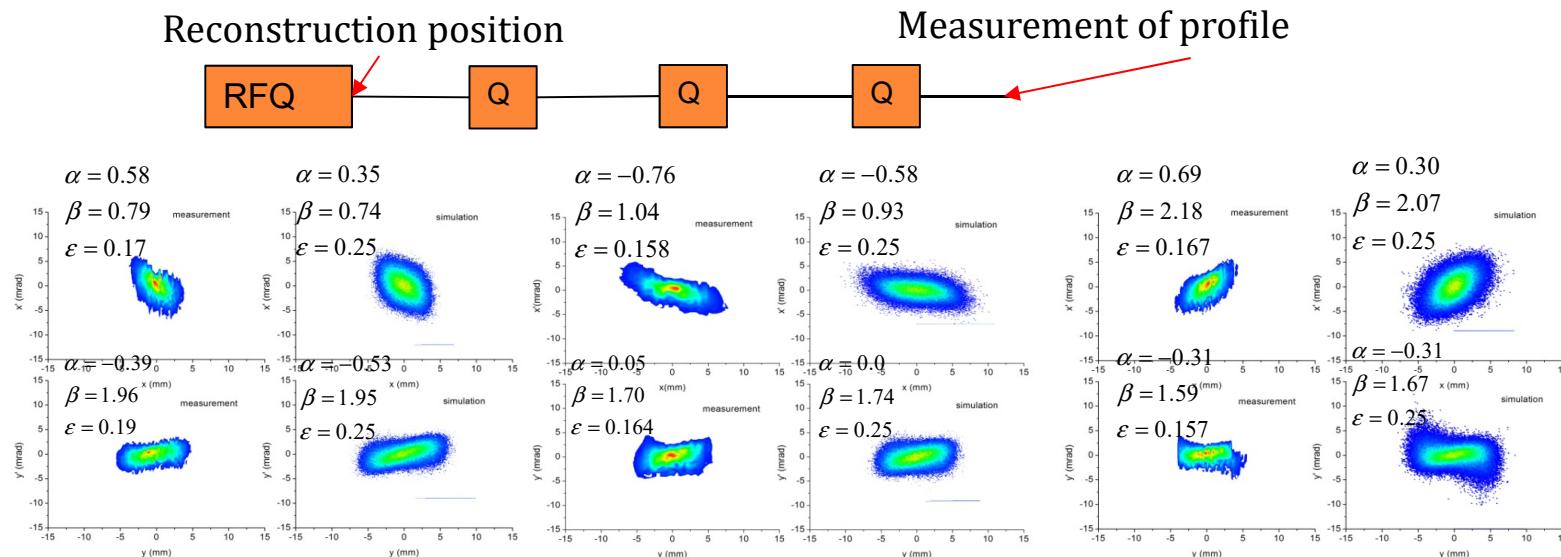

Commissioning of RFQ

- Apr. 17 to Jun. 6 '14, conditioned to 90 kW
- **June 6th, 2014, the first beam, 2.16 MeV**
- **June 21st, the first CW beam @ 2 mA**
- **June 30th, 10 mA, CW, 21 kW, 4.5 hours, transmission >97%**
- **CW RF Operation > 6000 hours**

Re-construction of beam distribution

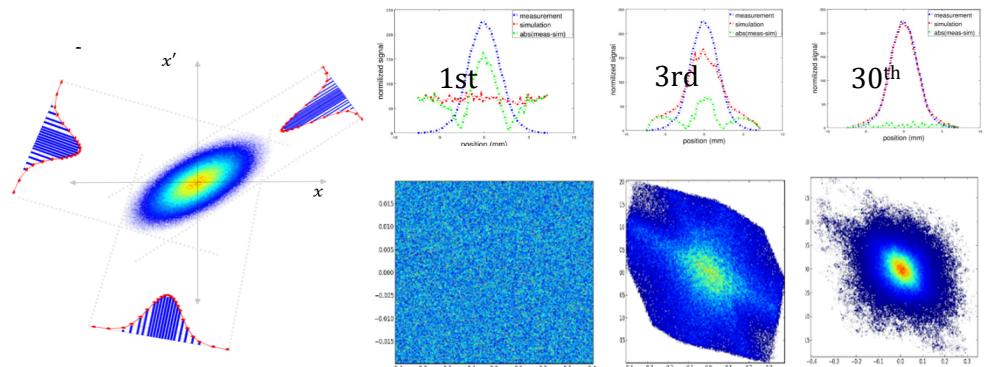

Objection :

- Reconfiguration of four dimension emittance with space charge effect

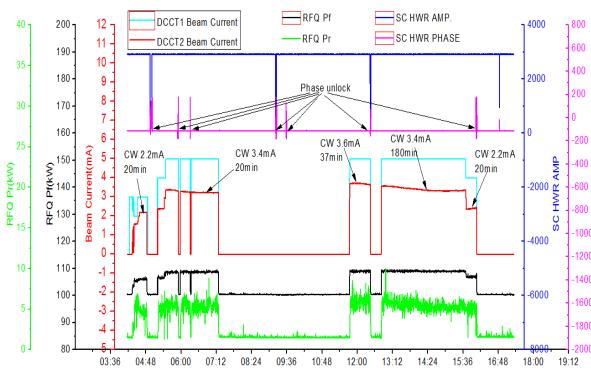

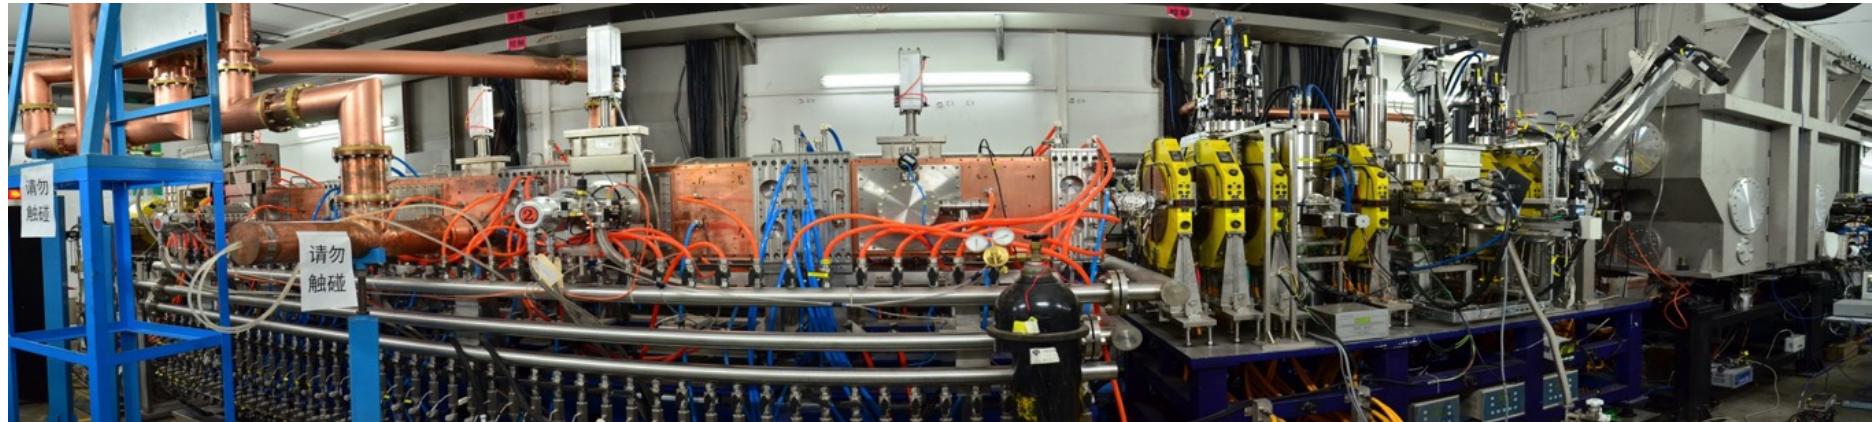

Challenge :

- Nonlinear space charge effect
- RF nonlinearity

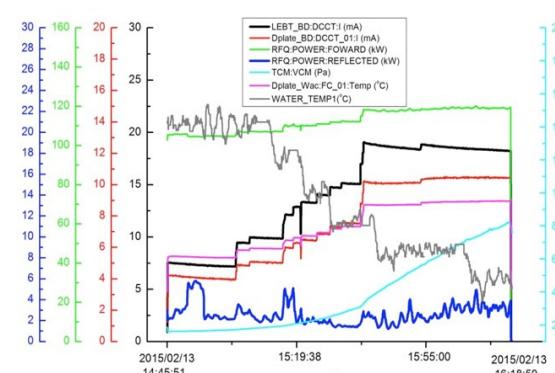

Setup of SC linac base on the re-constructed beam

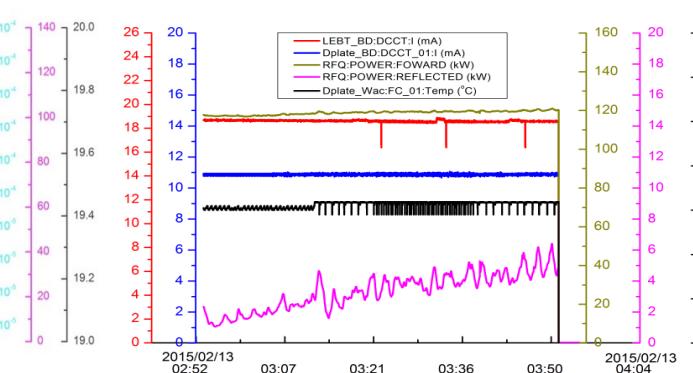

CW Beam Commission to 11 mA

- Nov.25th, 2014, first CW,
- 3.4 mA, ~6 hours.

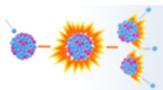

- Feb. 4th, 2015, 4.2~10.8 mA,
- 2.5MeV, CW

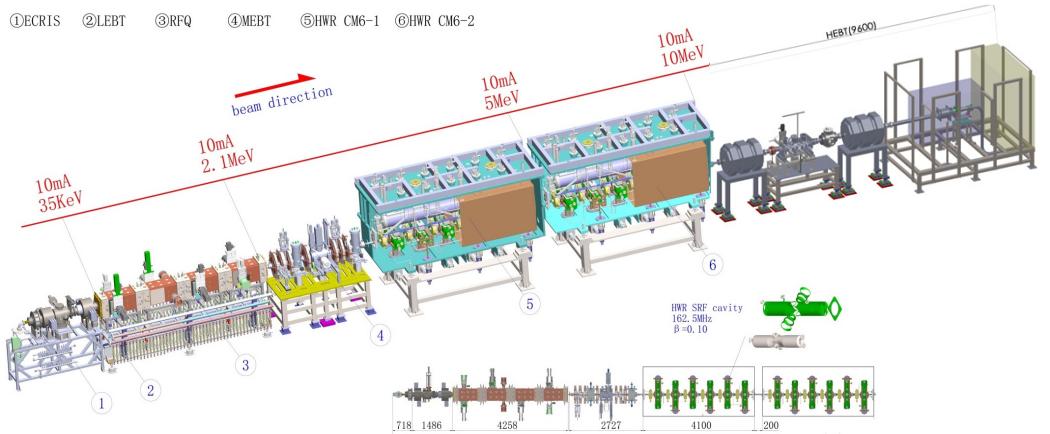

- Feb. 23rd, 2015, achieved 2.5MeV/~11mA/28kW, ~1 hour

- RFQ works with two bunches and one HWR, RF frequency can not change any more like working alone.
- Due to detuning of 3 mA beam-loading, Pr is 5 kW, but it is still stable.
- 10 mA beam will cause ~8 kHz detuning of RFQ, Pr is large enough to shut down AMP.
- Frequency tuned by temp. of 0.5 C to keep Pr stable.

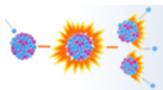

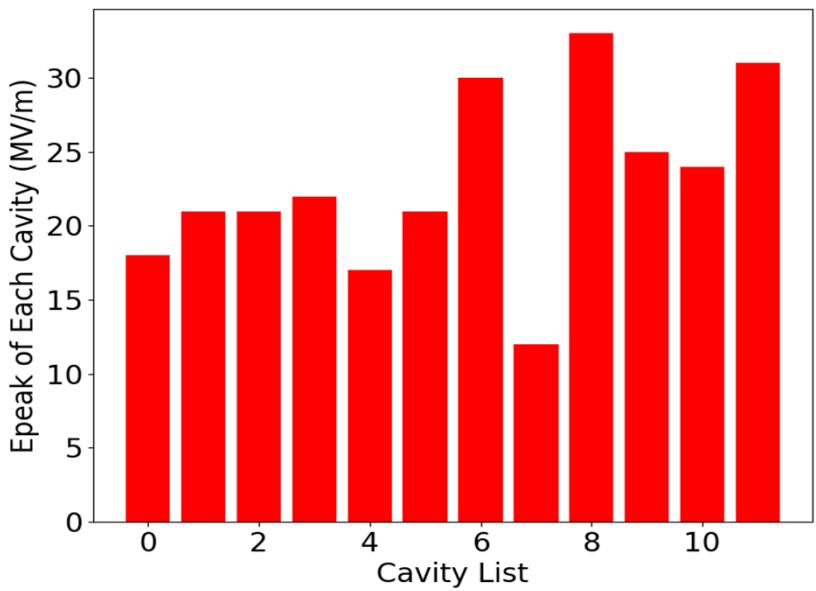

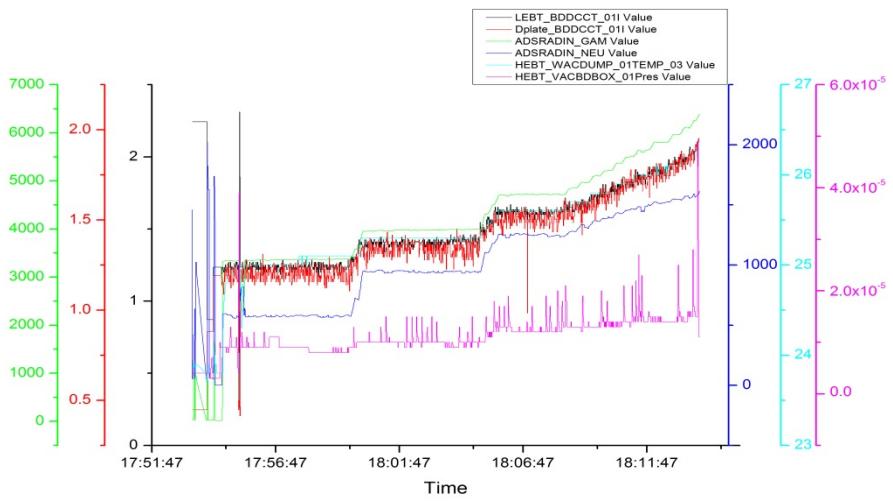

CW Commissioning of 10 MeV

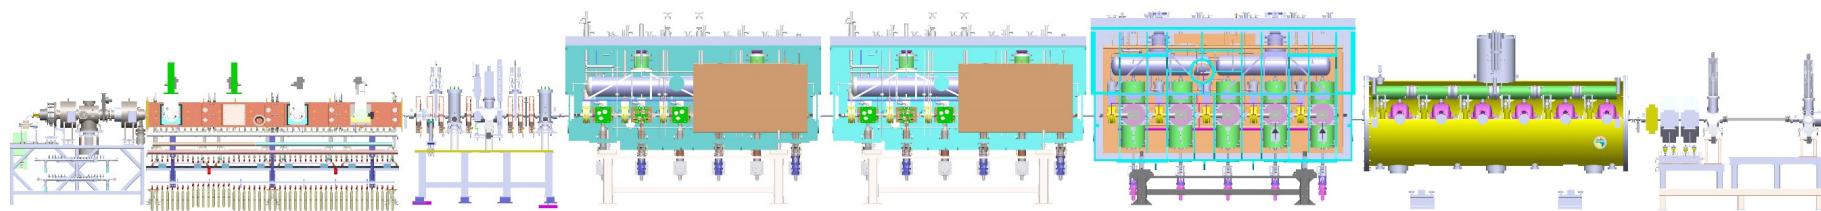

①ECRIS ②LEBT ③RPQ ④MEBT ⑤HWR CM6-1 ⑥HWR CM6-2

NOV 27th-28th, 20 minutes CW beam operation at 1.2 - 2.7 mA without uncontrolled beam loss

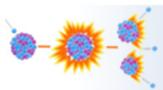

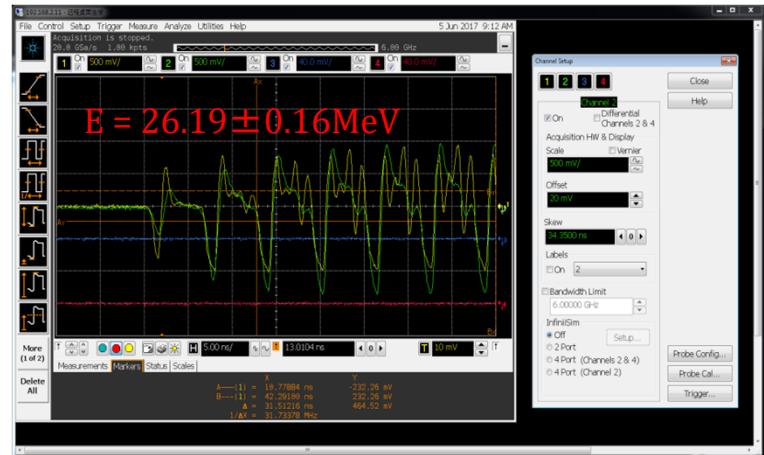

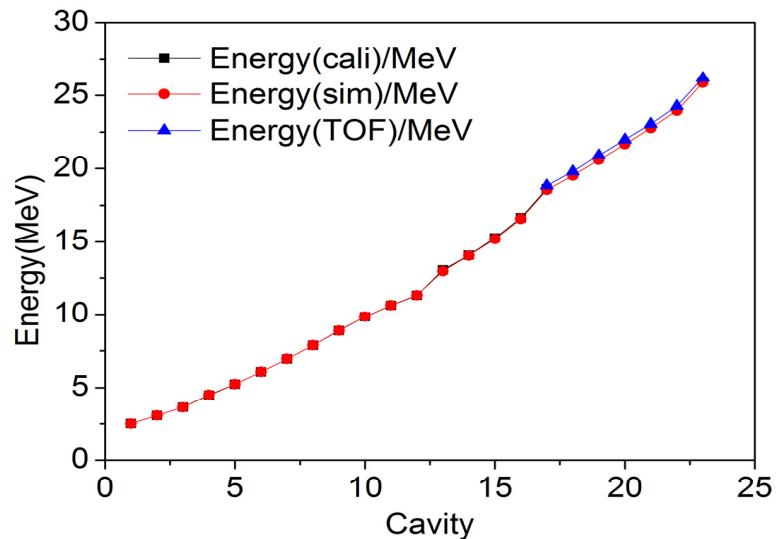

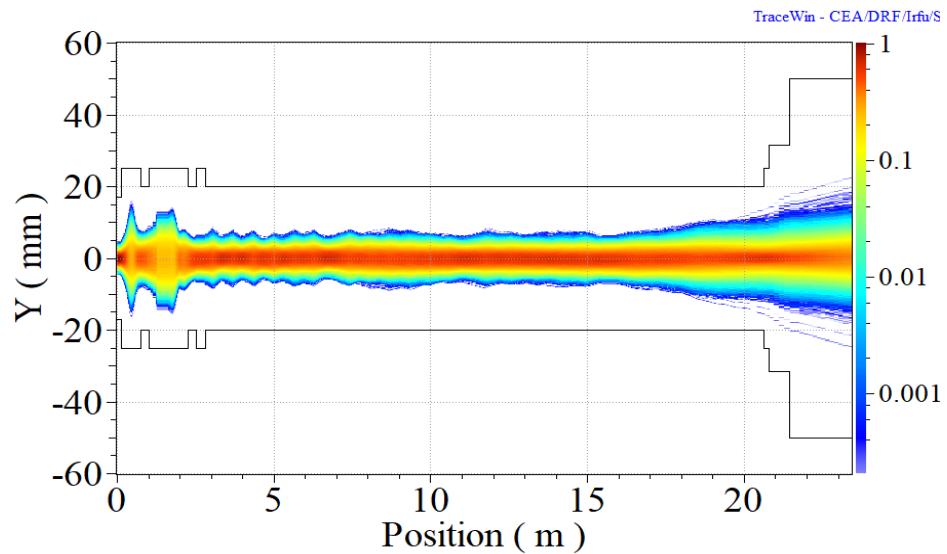

The first beam commissioning of CAFE

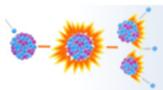

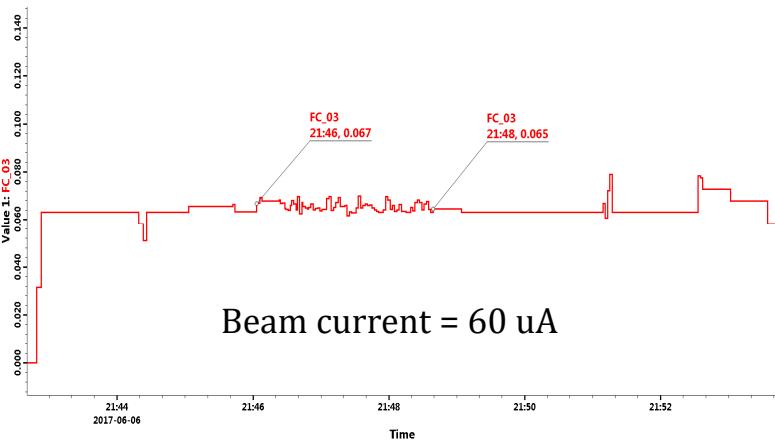

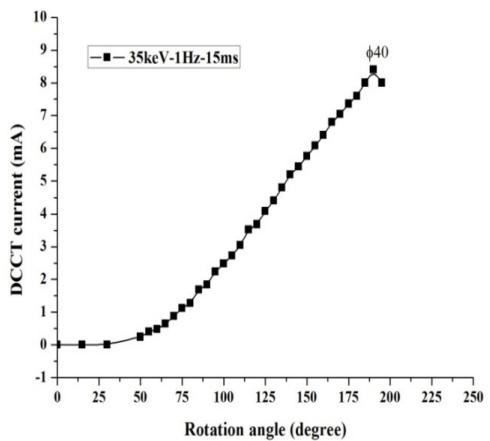

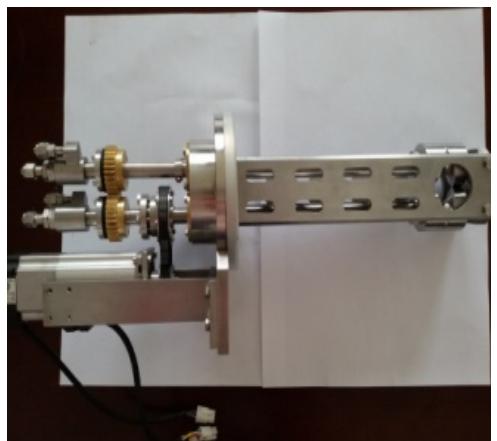

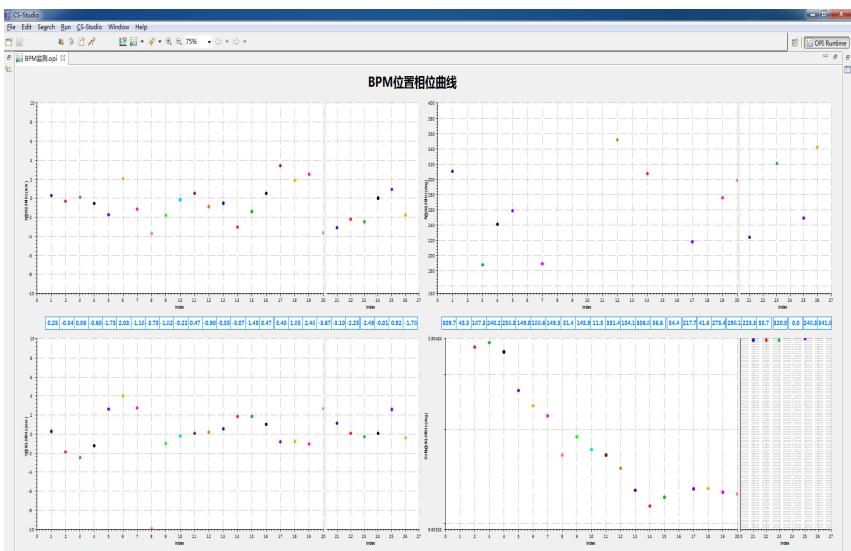

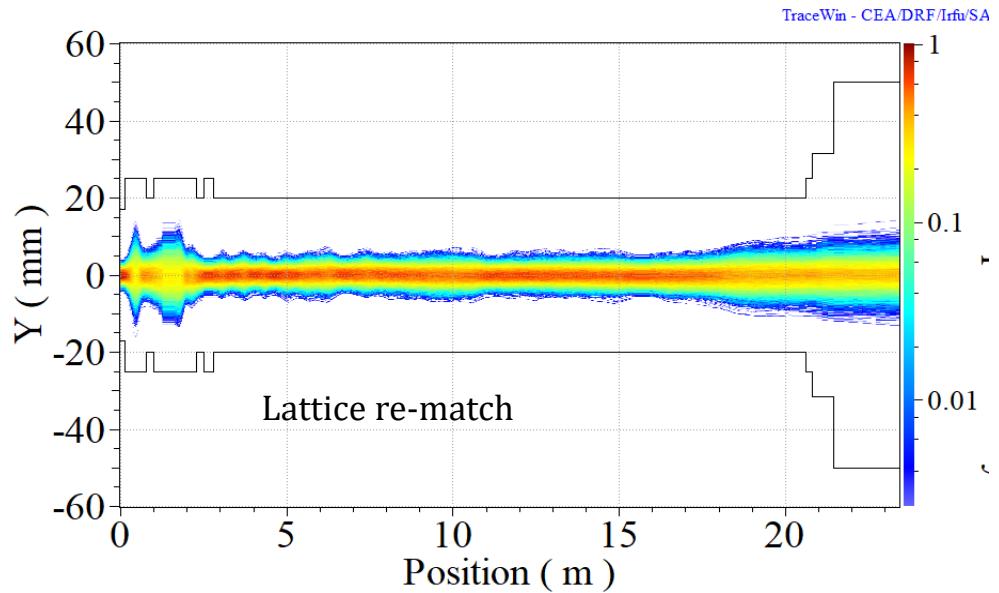

- CM1,CM2 were re-installed in Feb 2017;
- CM3 and CM4 were on line on May. 9th , 2017;
- First beam was achieved on May. 28th , 2017 ;
- The energy is up to 26.2 MeV on June. 5th , 2017;
- CW beam with energy 25MeV went through on June 6th , 2017.

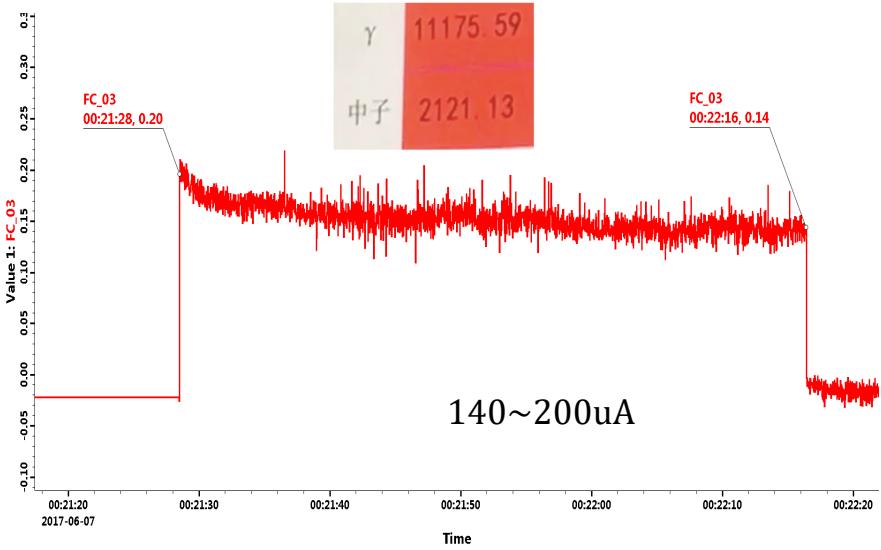

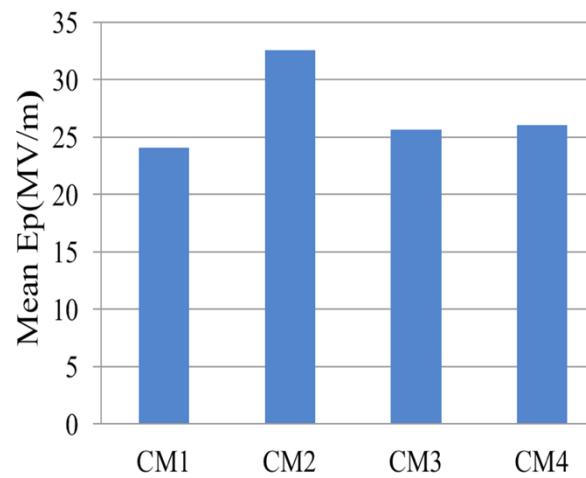

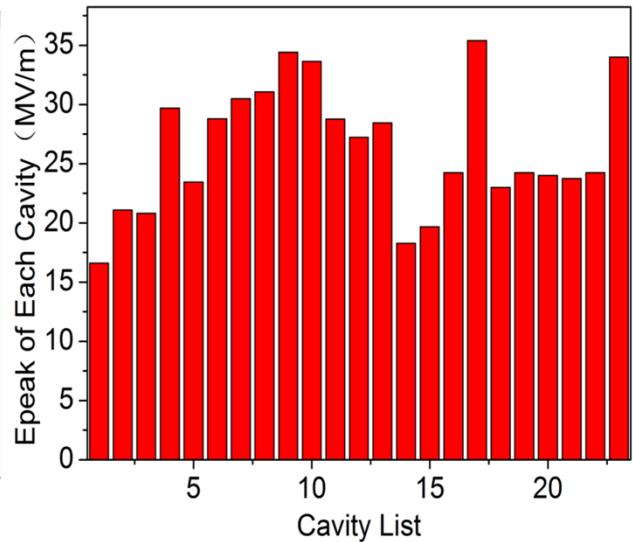

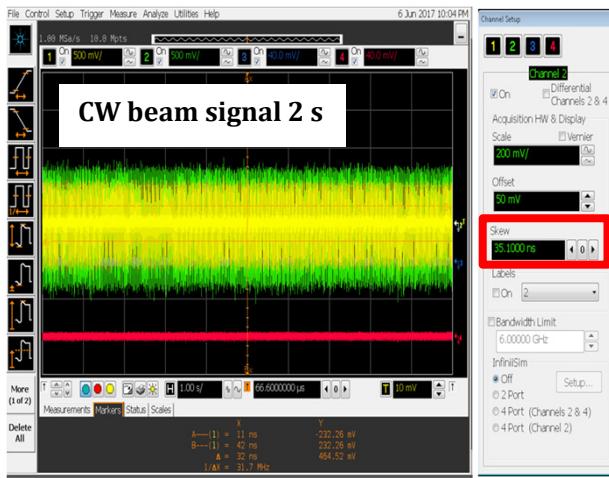

Pulse Beam Commissioning

First CW Beam Tuning

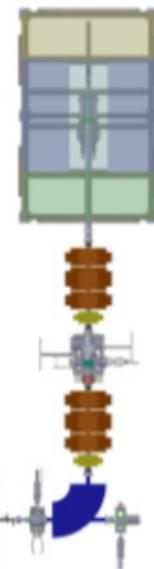

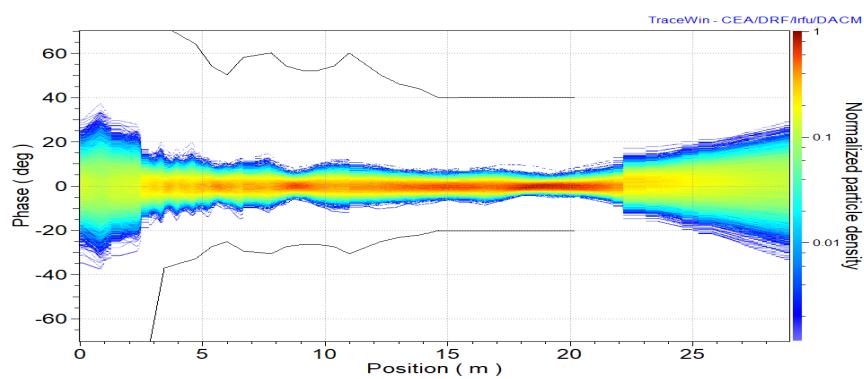

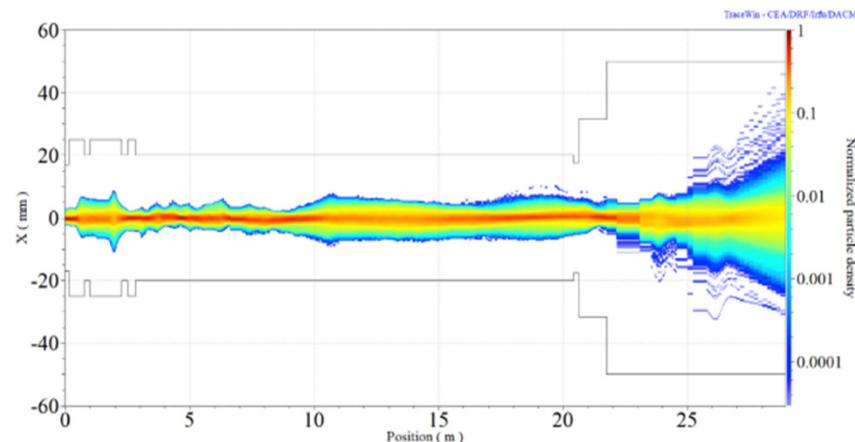

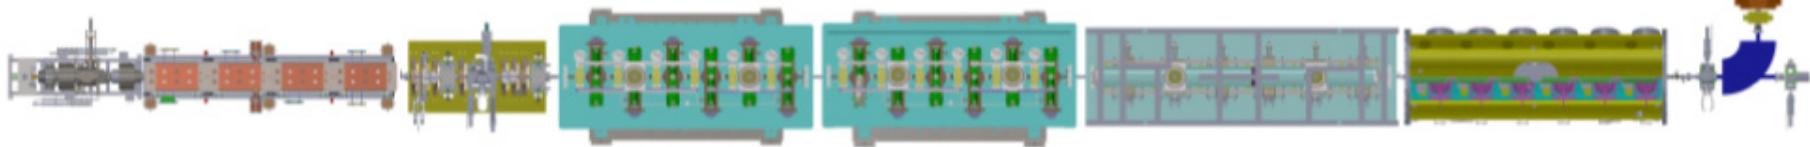

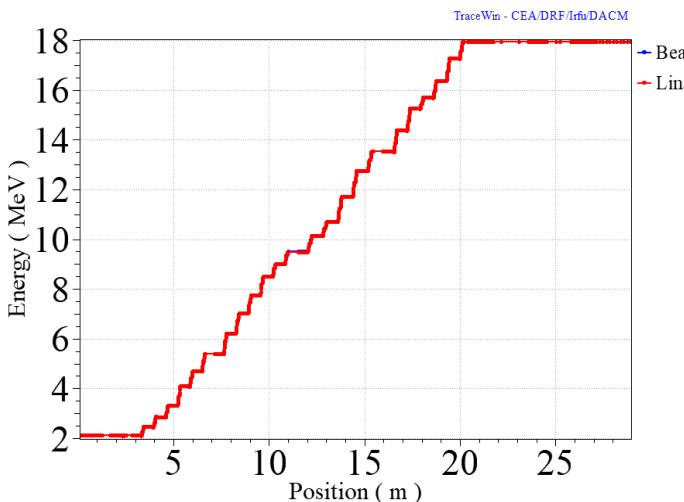

First CW Beam Commissioning

- Beam dump and radiation shielding are the limit to higher beam power and long time operation.
- No evident beam loss observed by temperature sensors

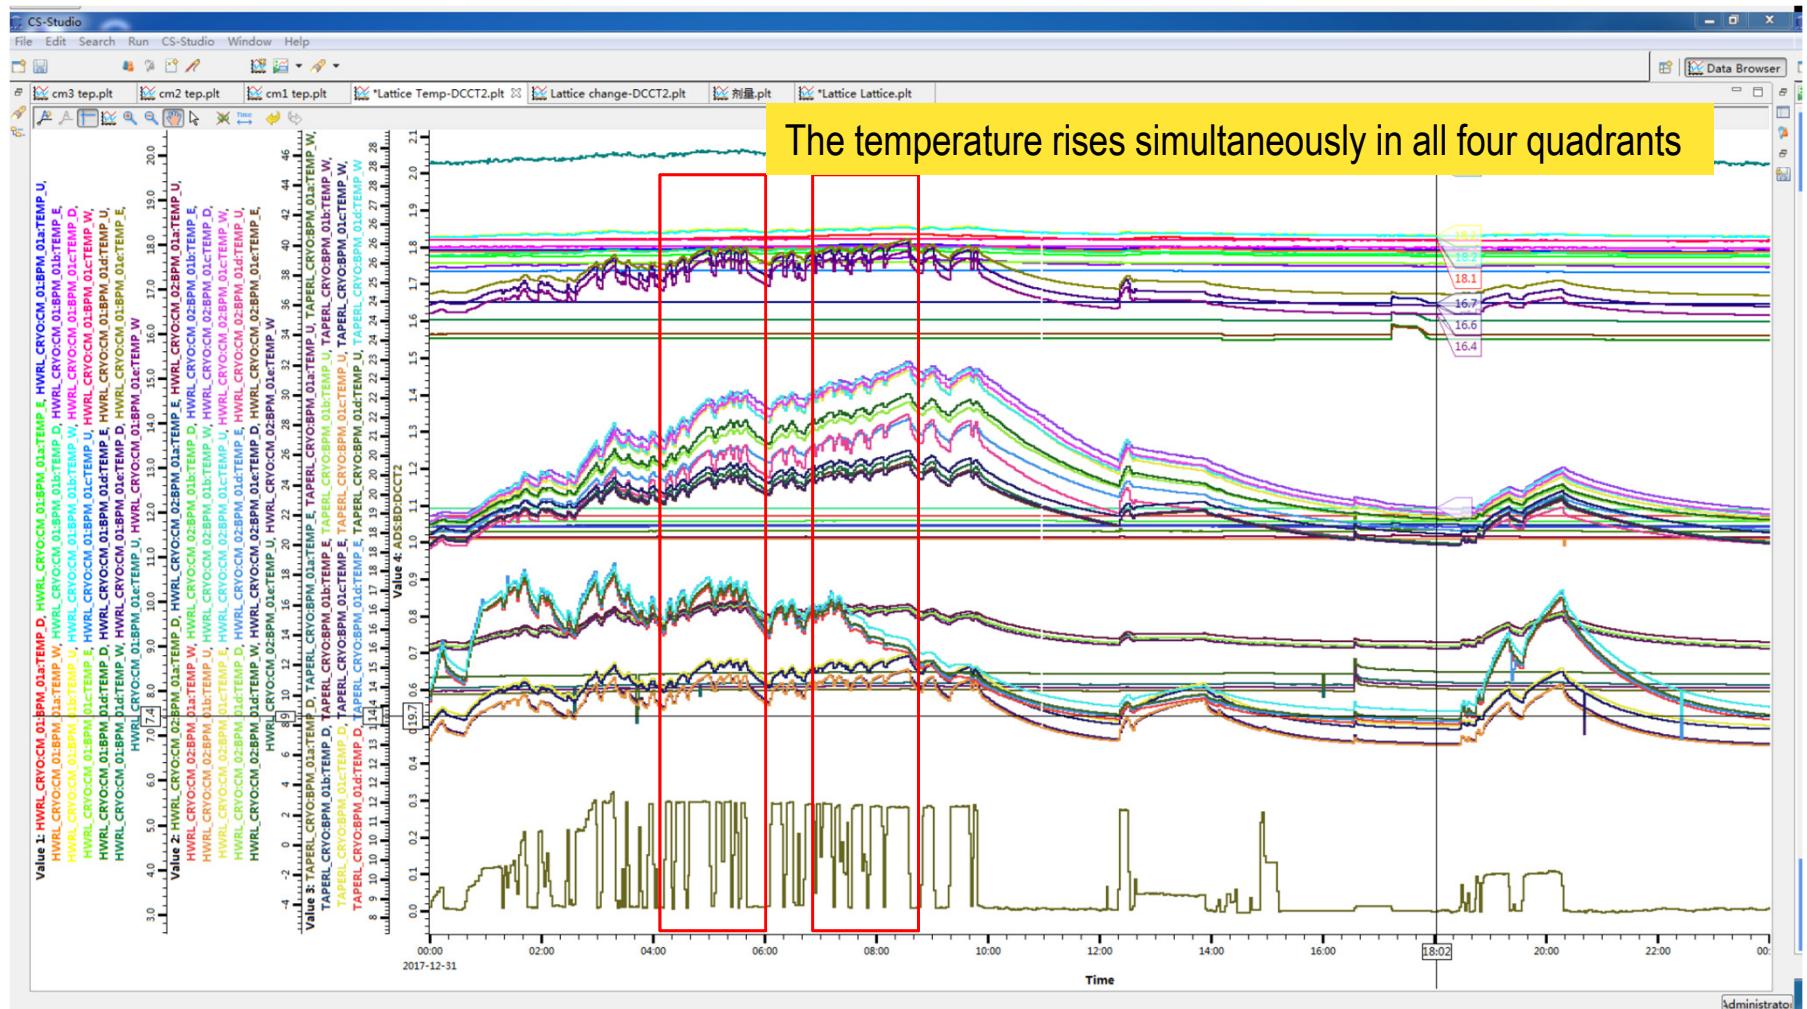

Machine Reliability Operation

- Operation in December 2017, ~18 MeV, Bending beam to the 100 kW dump
- Plan to operate pulse beam for 72 hours with 1 mA and 10 mA
- Plan to operate CW beam for 72 hours with 0.2 mA
- Current leads cooling trouble limit the transversal focus in CM3

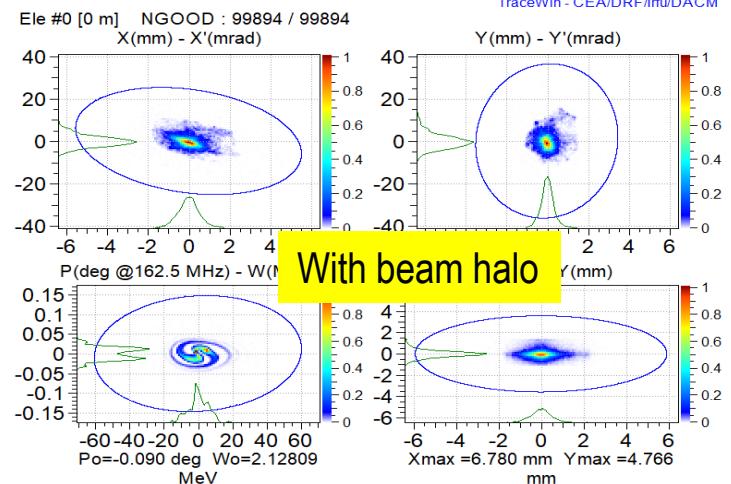

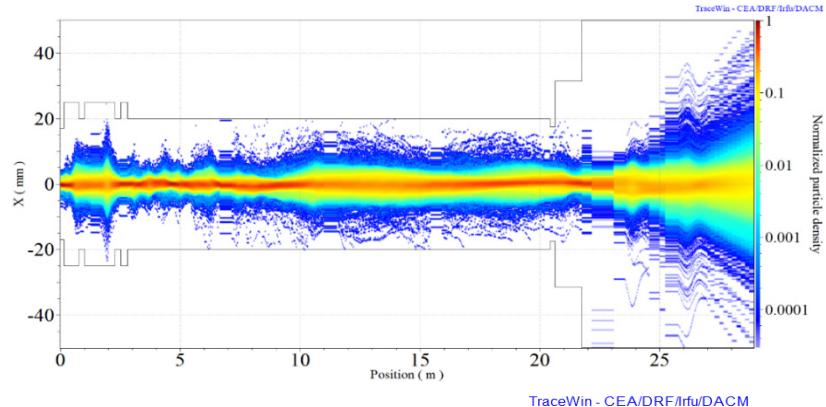

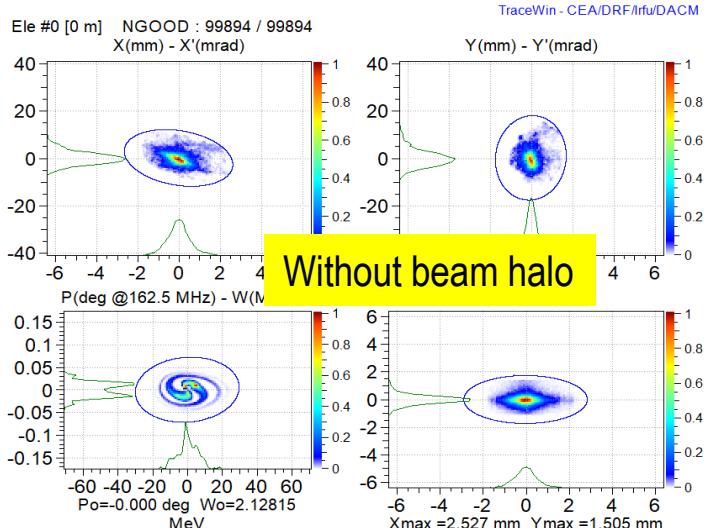

Beam loss study

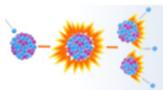

Beam loss study

- ◆ The 6-dimensional ellipsoid gaussian is truncated at 3 RMS
- ◆ 1% of the total number of particles was defined as beam halo particles at the position of 10 times of RMS beam size in the horizontal and vertical RMS

	Alpha X/Y/Z	Beta X/Y/Z m/rad	Emit-X/Y/Z (RMS) $\pi \cdot \text{mm} \cdot \text{mrad}$ [Norm.]	Emit-X/Y/Z(99.99%) $\pi \cdot \text{mm} \cdot \text{mrad}$ [Norm.]
Without beam halo	0.247/-0.05/-0.076	0.226/0.096/0.611	0.112/0.097/0.094	2.065/2.066/2.136
With beam halo	0.247/-0.051/-0.080	0.226/0.096/0.608	0.122/0.106/0.01	9.158/8.536/8.902

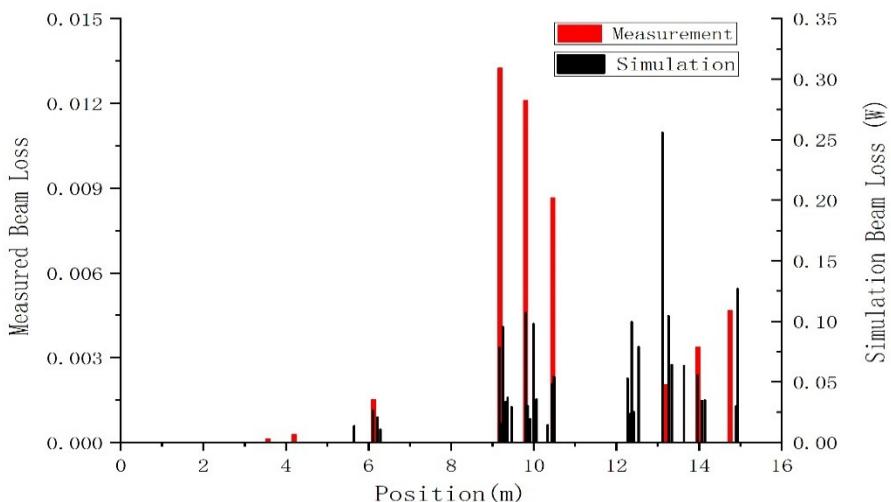

Beam loss study

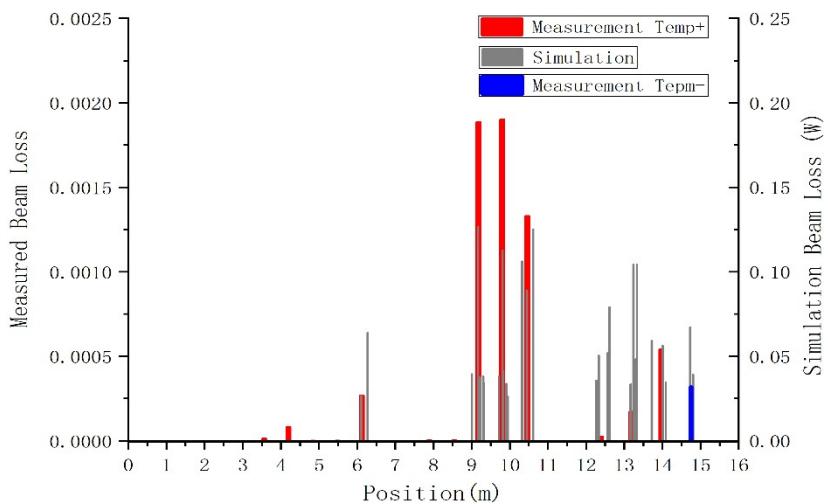

The beam loss is defined as the sum of four quadrant temperature raising per unit time at a certain temperature probe:

$$\sum_i^4 k_i = \frac{\Delta T_i}{t}$$

Lattice 1

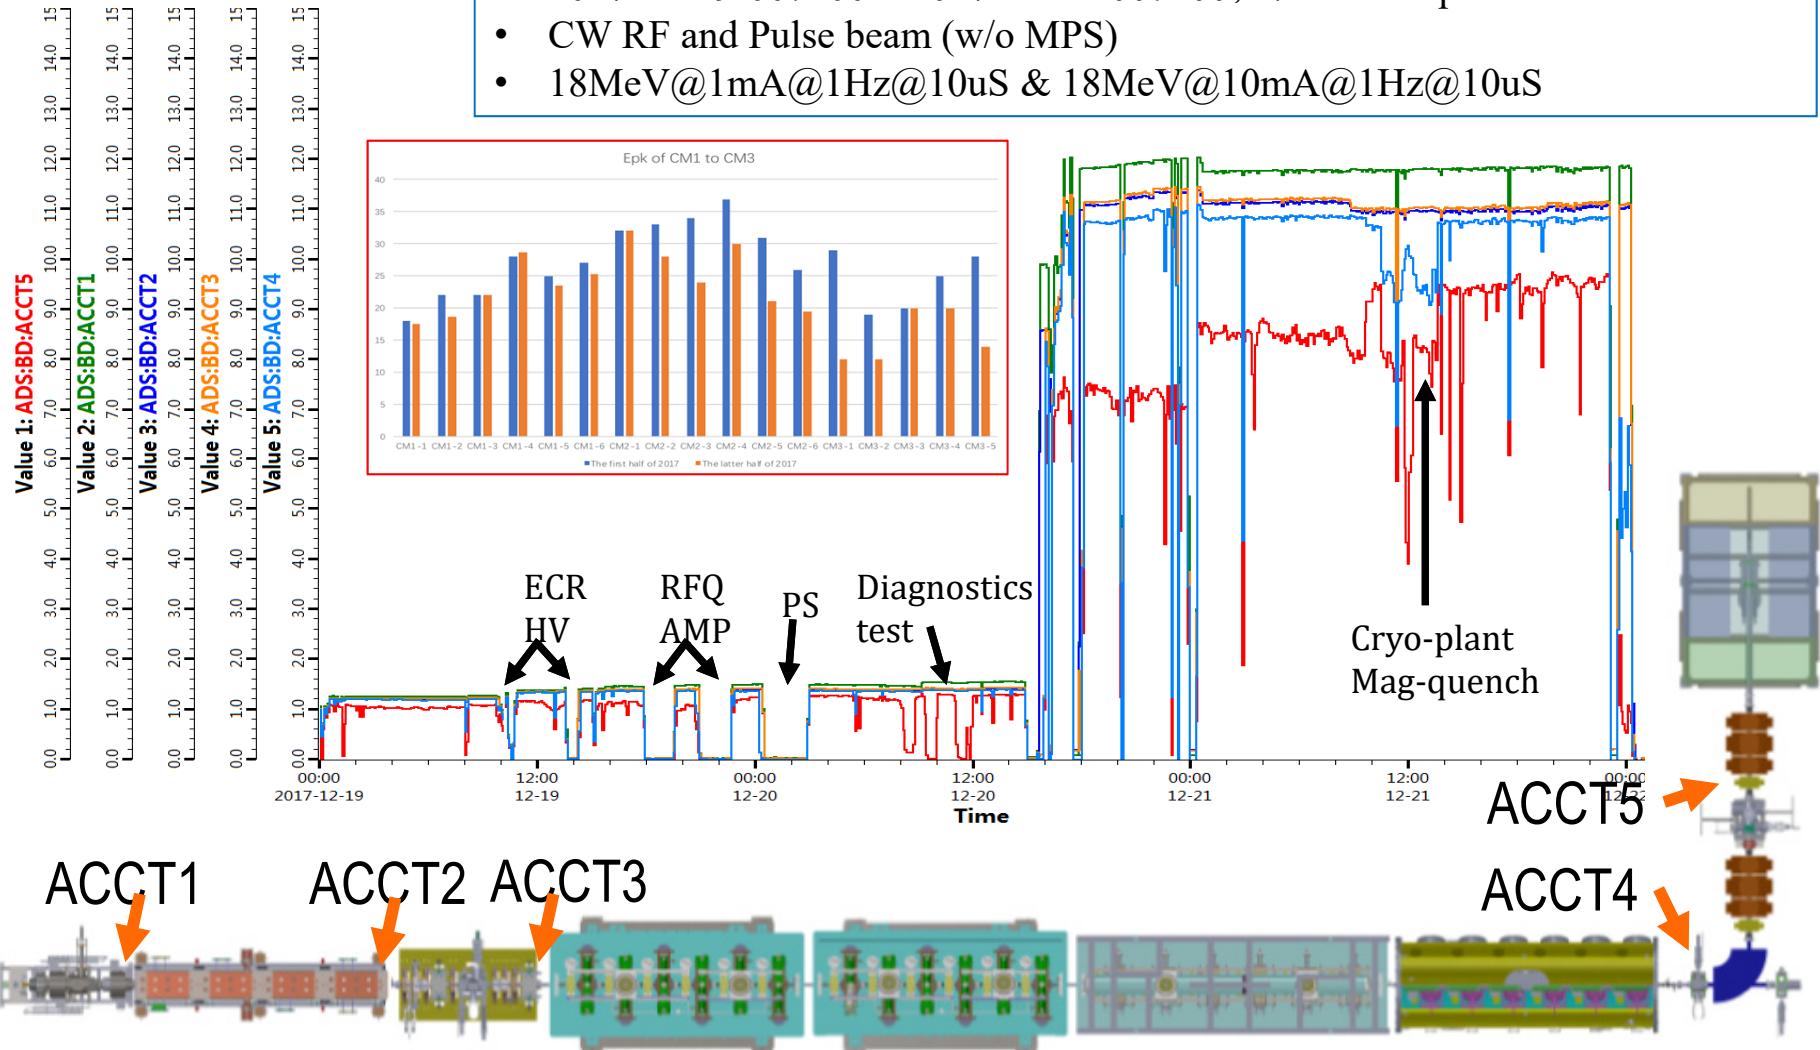

Lattice 2

The results of simulation and experiment are consistent

Reliability of pulse beam operation

- 2017-12-19-00: 00 ~ 2017-12-22-00: 00; 72 hours operation test
- CW RF and Pulse beam (w/o MPS)
- 18MeV@1mA@1Hz@10uS & 18MeV@10mA@1Hz@10uS

Preliminary RAMI analysis

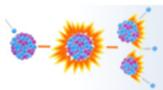

Beam trip required by ADS demo facility	
Beam trips (10s-5min)	2500/year
Beam trips (>5min)	300/year
Availability	80%

- Some long time repair failures (> 5 min), such as HV, AMP, Cryo-plant, PS, have very clear reason, can be avoided in the next stage
- 10s-5min-trip number is less than the requirement. Root cause of trips of SRF are still under investigation

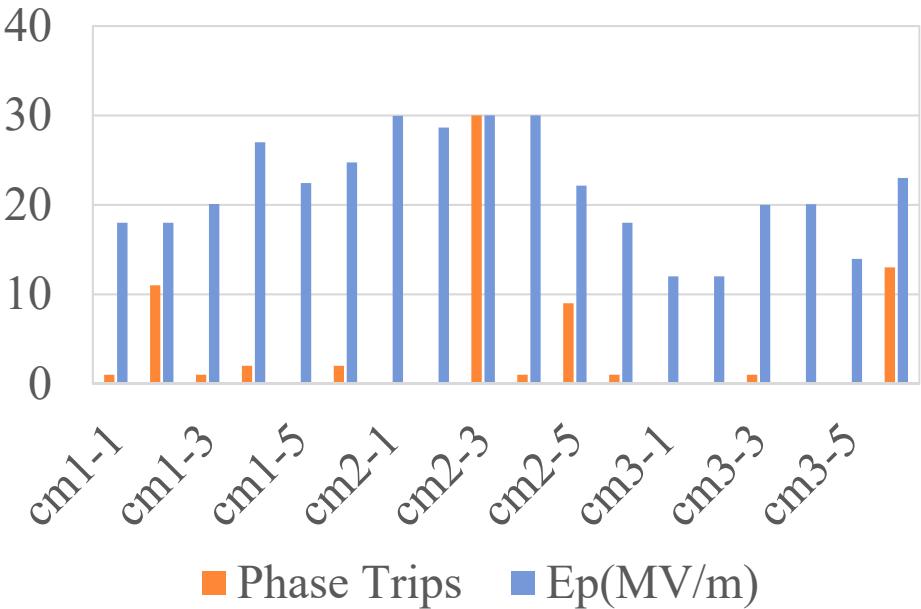

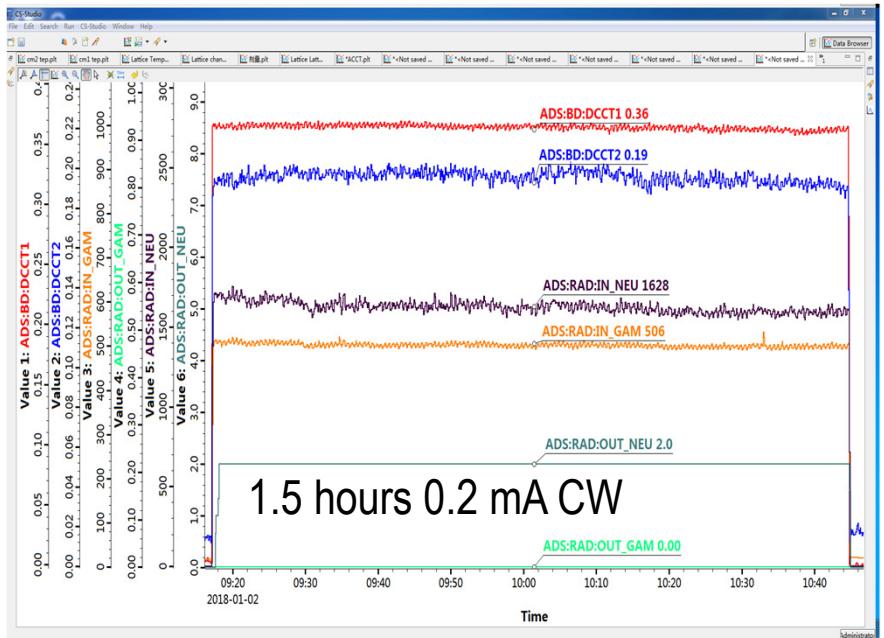

Operation time	Beam time	Down time	Availability
4050 min	3566 min	484 min	0.88

Mean time between failure MTBF (min)	Mean time to repair MTTR (min)	Beam trips (10s-5min)	Beam trips (>5min)
111.4	16.1	20	10

	ECR HV	RFQ AMP	SRF (incl. LLRF)	Cryo-plant	Power supply
Beam trips	6	2	21	1	1
Down time	53 min	77 min	78 min	183 min	100 min

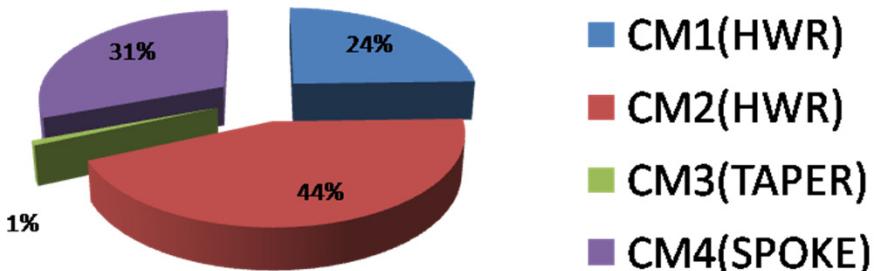

Reliability of CW beam operation

- Beam: 0.1~0.2mA CW; Operation time: 27 h
- MPS trips while phase error $\Delta\varphi > 5 \text{ Deg}$, main reason of stopping beam
- Automatic recovery procedures need to be developed to reduce MTTR
- CM2-3 has weak coupling, 1/3 of the other bandwidth, reason 1
- Discharge in pick-up were observed, reason 2

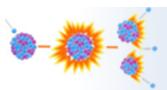

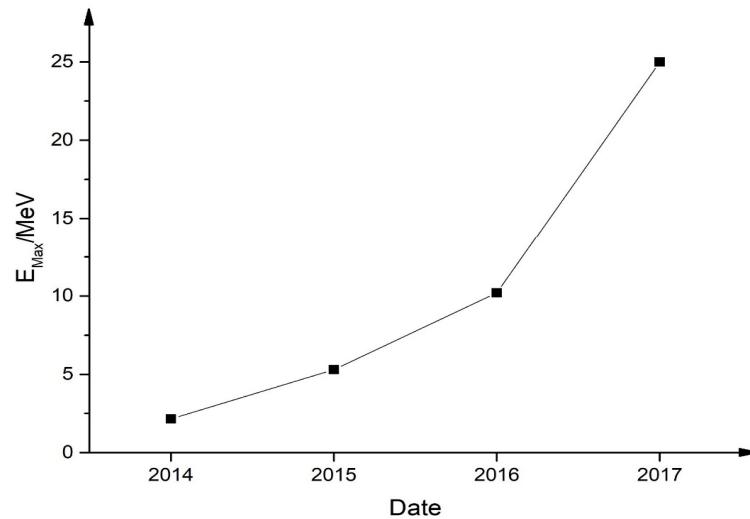

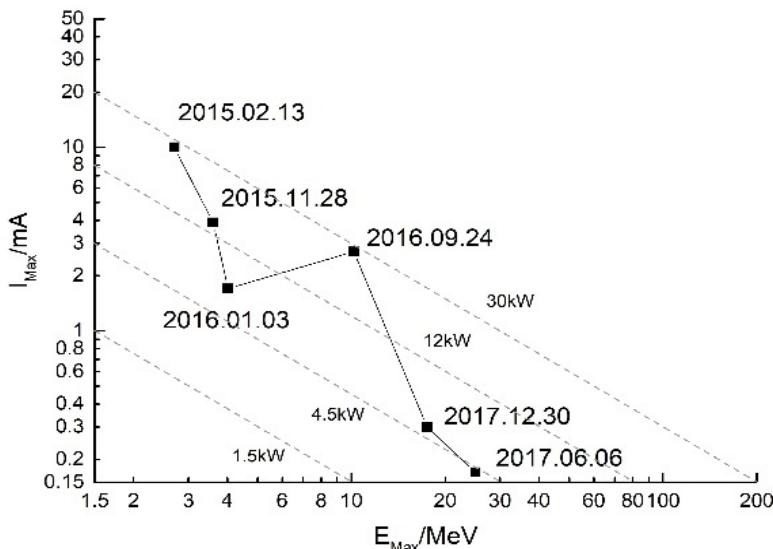

cryomodule phase trip statistics

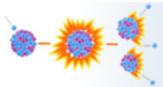

Commissioning Summary 2014-2017

Commission stage	First CW beam	Max Energy (MeV)	Beam time (hours)	CW beam time Total (hours)	CW Current Max(A)	CW Power Max(kW)
RFQ	Jun. 21, 2014	2.15	2036	90	11	23
TCM1(1HWR)	Nov. 24, 2014	2.55	208	22.5	11	28
CM1(6HWRS)	Jun. 24, 2015	5.3	400	20	4	21
CM1+CM2(12HWRS)	Sep. 24, 2016	10.2	327	11	2.7	26
CM1...CM4 (17HWR+6SPOKE)	Jun. 7, 2017	26.1	334	27	0.3	5

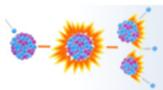

- ▶ Introduction of CiADS
 - ▶ Design of superconducting Linac
 - ▶ Beam commission of Chinese ADS
- Front-end Demo Linac (CAFe)
- ▶ Summary

Summary

- **CiADS will kick off by the end of the year, baseline beam dynamic of 500 MeV, 5 mA has been done**
- **The China ADS Front-end demo linac (CAFe) have been constructed, and the first CW beam and reliability operation have been done**
 - 4-D beam re-construction at MEBT to initialize beam
 - Orbit alignment and phase calibration
 - Machine protection under high beam power
 - Effective beam loss detection at low energy section
- **Sufficient and Efficient MPS, fault recovery strategy is under developing to improve reliability**
- **Upgrading of CAFe for He beam will be done in July, next commissioning campaign will start in September 2018.**

Thanks for your attention
