

Software for building SCADAS in scientific environments

Tiago Coutinho - ALBA's controls team

Do you want to know what it is?

Morpheus: Do you believe in fate, Neo? Why not?

Neo: Because I'm not in control of my laboratory

Morpheus: [...] do you know what I am talking about?

Neo: *The Sardana*

Morpheus: Do you want to know what it is?

Neo: Yes!

Morpheus: *Sardana* is everywhere. It is all around us (in the lab). You can see it when you move a motor, when you monitor a temperature, when you do an energy scan.

**A software package for instrument
control and data acquisition**

- Fully customizable
- Auto discovery
- Extensive widget catalog
- Drag-n-drop between applications

1. At runtime

2. Designer

3. Write your own code

```
from taurus.qt.qgui.panel import TaurusForm

panel = TaurusForm()
props = [ 'state', 'status', 'position', 'velocity', 'acceleration' ]
model = [ 'sys/taurustest/1/%s' % p for p in props ]
panel.setModel(model)
```

- IPython based
- Context sensitive command completion
- Command history
- Help system
- Error handling

```
/bin/bash 90x39
tcoutinho@pc151:~/workspace/Spock$ ./spock -p BL98

Spock 7.2.1 -- An interactive Tango client.

Running on top of Python 2.6.6, IPython 0.10 and PyTango 7.2.1dev

help      -> Spock's help system.
object?   -> Details about 'object'. ?object also works, ?? prints more.

Spock's sardana extension 0.5.0 loaded with profile: BL98 (linked to door 'Door_BL98')

- Distributed
- Extensible
- Scalable
- Tango based
- Event based
- Set of tools

Morpheus: You take the red pill, you stay in Wonderland, and I show you how deep the rabbit hole goes

Controller Plug-in

```
from sardana import State
from sardana.pool import MotorController

class NSC200Controller(MotorController):
    """This class is the Tango Sardana motor controller
    for the Newport NewStep handheld motion controller"""

    ctrl_properties = \
        { 'SerialCh' : { 'Type' : str, 'Desc' : '[...]' },
          'SwitchBox': { 'Type' : bool, 'Desc' : '[...]' }, }

    def AddDevice(self, axis):
        [...]

    def DeleteDevice(self, axis):
        [...]

    def StateOne(self, axis):
        if nsc200.is_moving(axis):
            return State.Moving, 'Motor in motion'
        return State.On, 'Motor is stopped'

    def ReadOne(self, axis):
        return nsc200.motor_position(axis)

    def StartOne(self, axis, pos):
        self.pos[axis] = pos

    def StartAll(self):
        nsc200.send_move_command(self.pos)

    def AbortOne(self, axis):
        nsc200.send_abort_command(axis)
```

Device Pool

Macro Plug-in

```
from sardana.macroserver import Macro, Type

class move(Macro):
    """moves a motor to the specified absolute
    position."""

    param_def = \
        ['motor', Type.Motor, None, 'motor to move',
         'pos' , Type.Float, None, 'absolute position']

    def run(self, motor, pos):
        self.debug('Moving %s to %s', motor, pos)
        motor.move(pos)
        self.info('Ended moving %s to %s', motor, pos)
```

Macroserver

GUI / CLI

```
from taurus.qt.qgui.application import TaurusApplication
from taurus.qt.qgui.panel import TaurusForm

app, panel = TaurusApplication(), TaurusForm()
attrs = 'state', 'status', 'position', 'velocity'
model = [ 'BL00/ENERGY/1/%s' % a for a in attrs ]
panel.model = model
panel.show()
app.exec_()
```

Taurus

Neo: [...] I can dodge bullets?
Morpheus: [...] when you're ready, you won't have to.

[...] in the early twenty-first century...

Morpheus: We have only bits and pieces of information but [...] at some point in the early twenty-first century all of mankind was united in celebration. We marveled at our own magnificence as we gave birth to... *Sardana!*

- Fully customizable/programmable GUI framework
 - Familiar looking CLI
 - Python oriented
 - Free, open source
-
- Distributed C-S arch
 - Scalable
 - Multi-threaded
- Tango, Qt, Python
 - Fairly documented

Morpheus: Unfortunately, no one can be told what *the Sardana* is. You have to see it for yourself:
