What is PLC-based IOC?

F3RP61

- ▶ CPU of FA-M3 PLC
- ▶ Executes Linux as It's OS
- ▶ Can have access to almost all of I/O modules
- ▶ Can work with ordinary sequence CPU if necessary

Making PLC itself IOC

Presented by S. Motohashi (KIS)

PLC(FA-M3)-based IOC

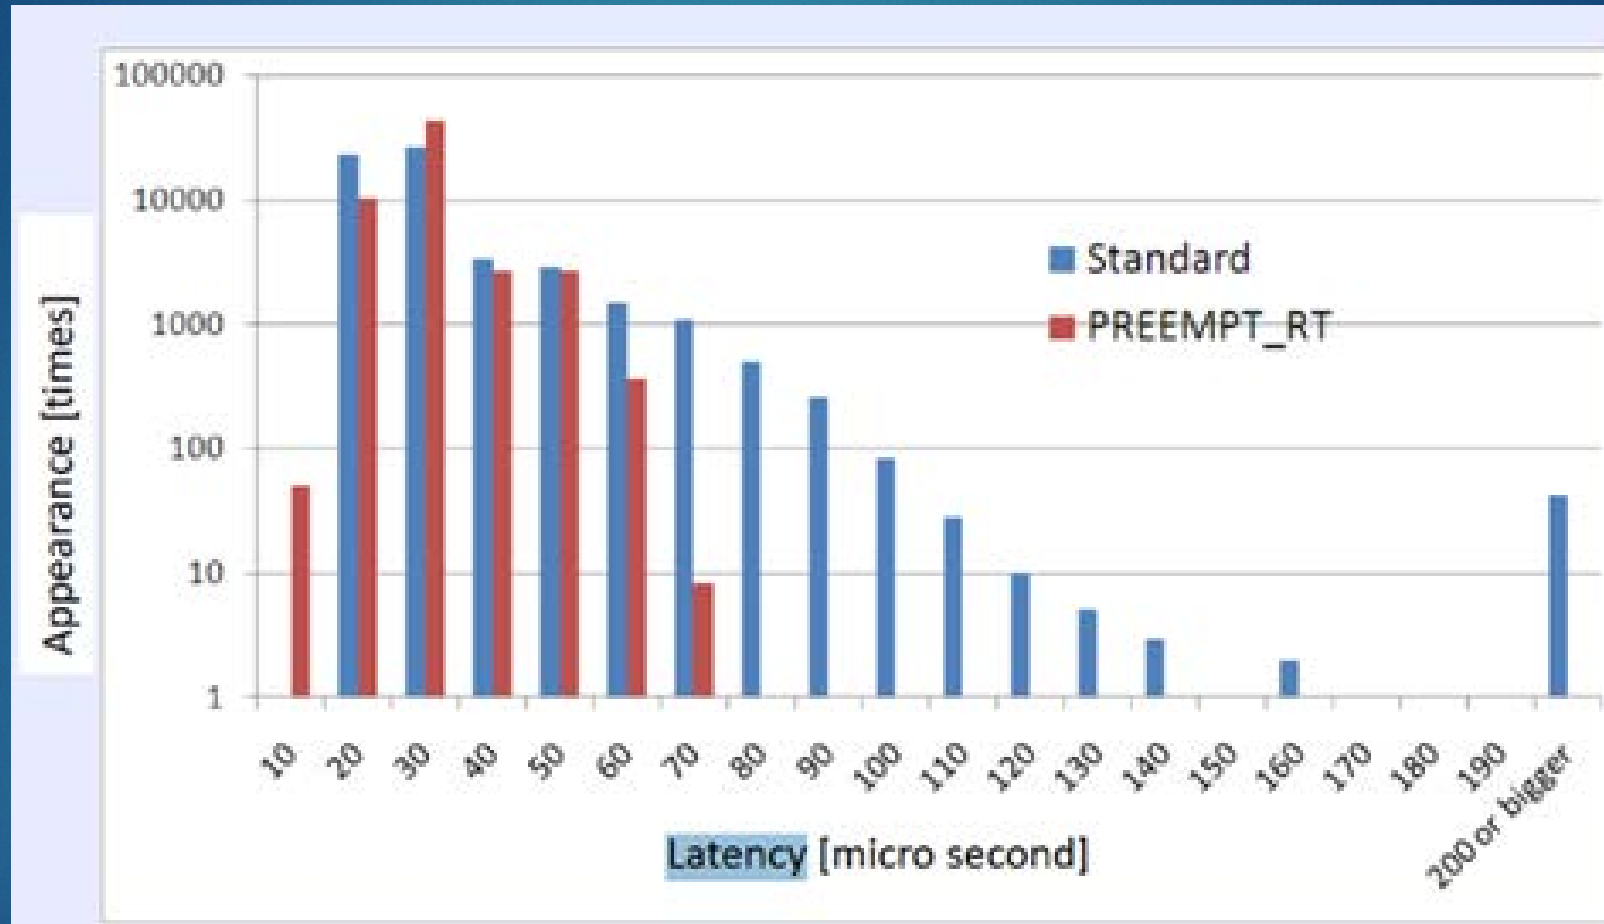

F3RP61

Presented by M. Komiyama (RIKEN)

Performance Measurement

| I/O Module type | Rcord Type | Record Processing | System Call |
|-----------------|------------|-------------------|-------------|
| F3AD08-1R | ai | 26.5 | 15.7 |
| F3DA08-1X | ao | 24.3 | 12.3 |
| F3XD32-3F | bi | 23.2 | 13.0 |

Real-time Performance

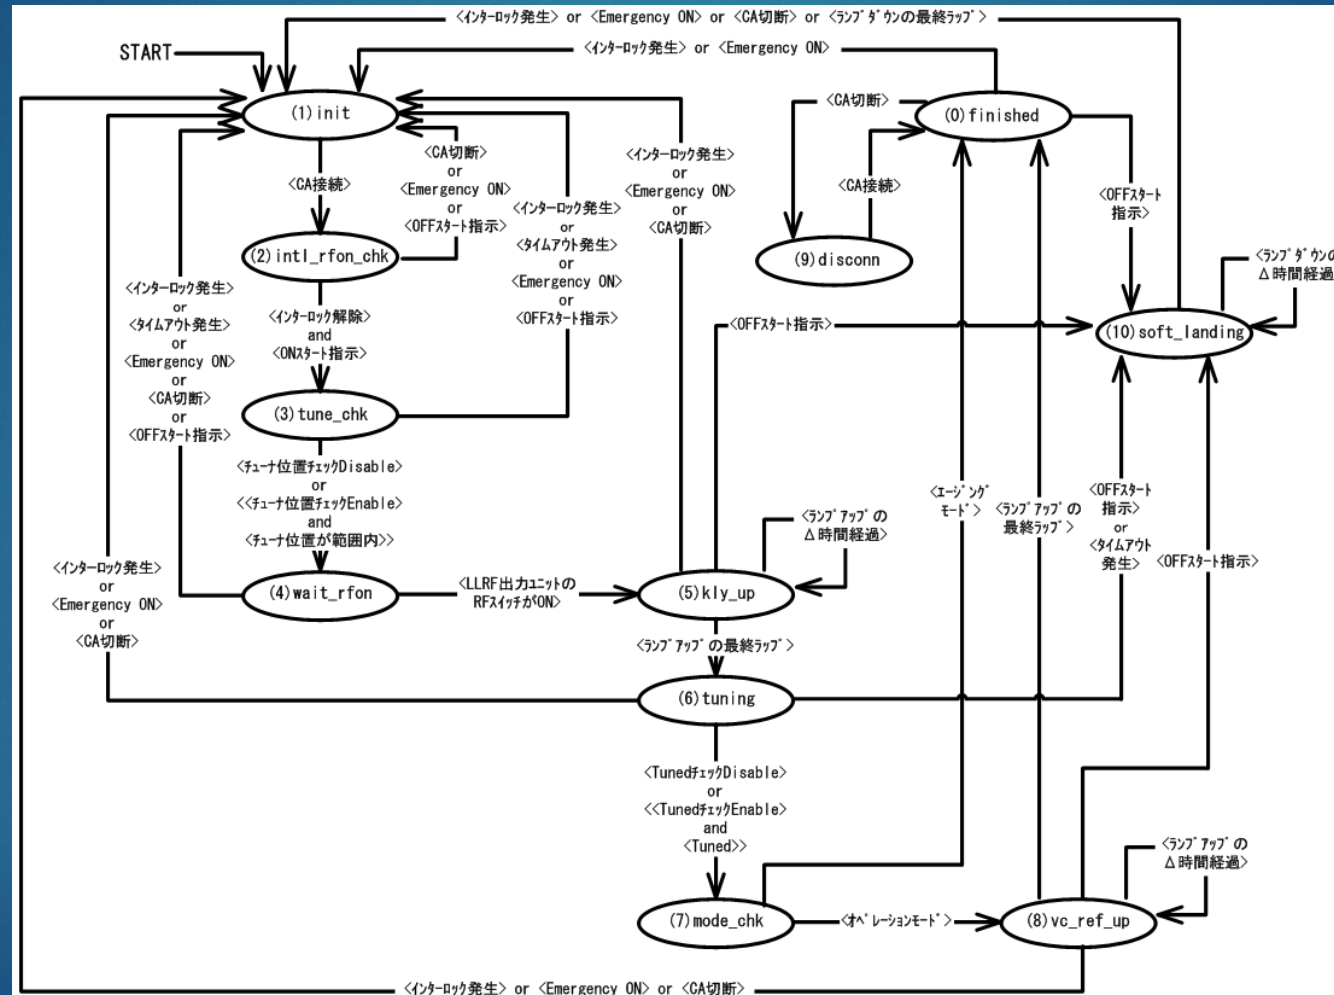

Application to LLRF Control System

Appearance of LLRF System

F3RP61

State Diagram of Start-up Sequence

Application to Vacuum Control System

Number of I/O Channels

| Component | Analogue Input | Analogue Output | Digital Input | Digital output |
|--------------|----------------|-----------------|---------------|----------------|
| Temperature | 4000 ch | | | |
| Ion Pump | 600 ch | | 600 ch | 600 ch |
| Vacuum Gauge | 600 ch | | 600 ch | 600 ch |
| Gate Valve | | | 80 ch | 80 ch |
| Rough Pump | | | 20 ch | 20 ch |
| NEG Heater | 550 ch | 50 ch | 50 ch | 50ch |
| Flow Meter | 1400 ch | | | 500 ch |

PLC-based IOC

F3RP61 (IOC)

Ordinary
CPU

CompactRIO (cRIO)

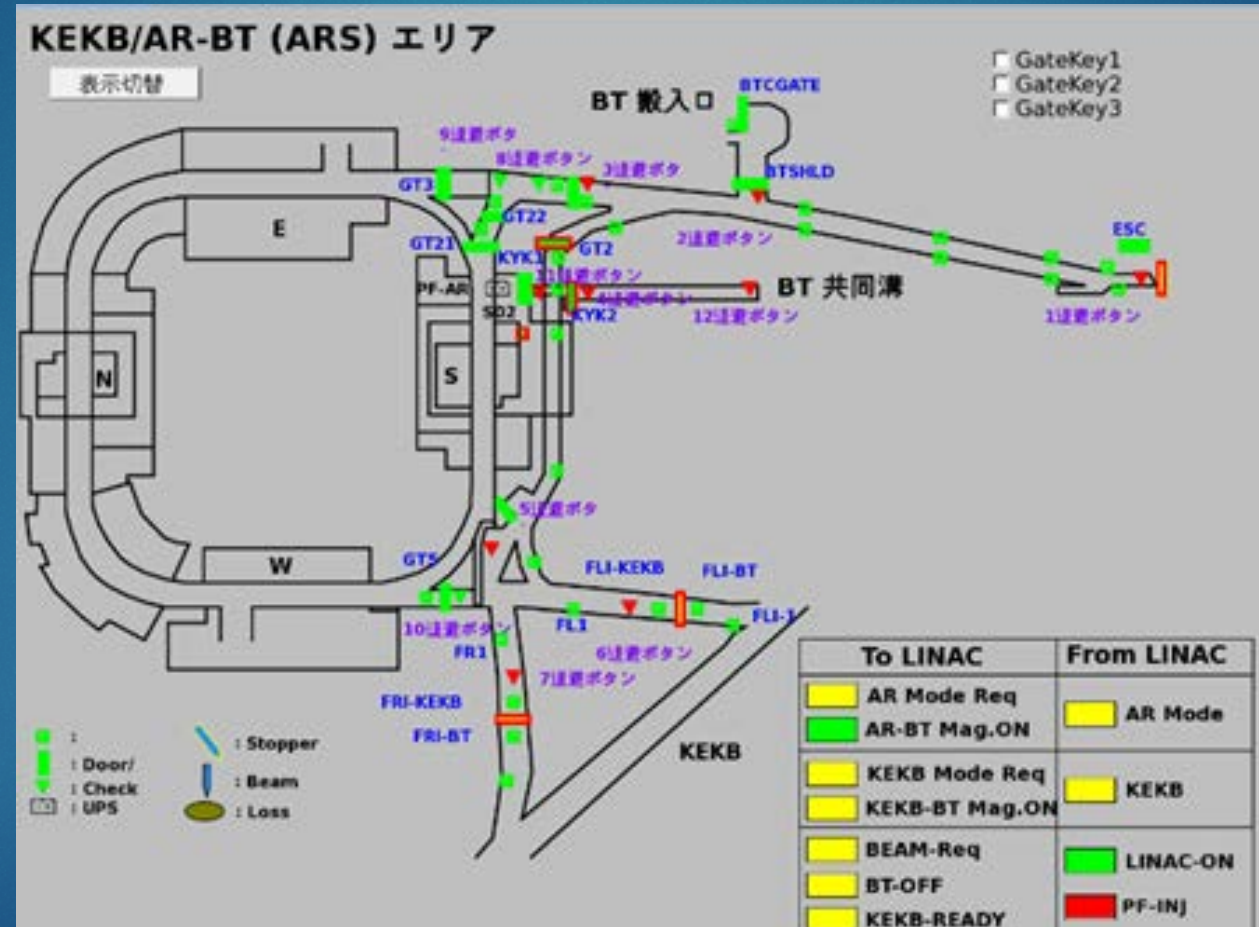

Application to Monitoring Personnel Protection System

Requirements and Solution

- ▶ IOC must be able to read any relay of interest
- ▶ IOC must NOT be able to write any relays

Display of Personnel Protection System

Conclusion

- ▶ The consolidation of IOC and PLC made the frontend control layer flatter and simpler to result in easier development and maintenance of control software.
